Wick Applicators are great for precision or drift free direct contact application, eliminating mist spray around valued plants or obstacles. Available as hand held Wick Stick for direct manual application or as a Boom Wick for vehicle attachment ideal for larger areas.

GARDEN WICK STICK

489

DRAWING **0694**

One wipe does it all! The successful wick wiping method has also been adapted to general garden use in an easy to handle, rake-size applicator. Its simple design allows liquid to flow from a long re-fillable PVC handle into a Pistachio wick head that in turn applies a lethal dose to weeds.

3M BOOM WICK APPLICATORS

48930BP

DRAWING **0287**

The boom wick applicator Ideal for killing weeds over crops or pasture when installed at a certain height features a tough chemical resistant PVC boom with a horizontally mounted double row of pistachio wicks that are at right angles to the tractor. The boom itself acts as a herbicide reservoir and can be simply filled by unscrewing its end cap. Supplied with bracing plate and brackets.

Guidance, Monitors & Foam Markers

GPS GUIDANCE SYSTEMS

The Matrix use's GPS technology to help guide tractors and machinery when boom spraying to minimise spray overlap/underlap to ensure optimal application. This modern advancement is ideal for use with a Boom Spray, Fertiliser Spreaders or even when raking hay to keep you on track and in a straight line replacing and enhancing the function of a foam marker.

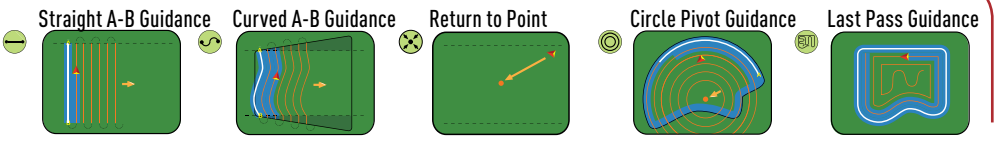

MATRIX 430

- Versatile GNSS guidance in a compact, portable package
- High-contrast, full colour, 4.3 in / 110mm graphic touchscreen display provides superior visibility in bright light conditions
- Guidance modes include: Straight AB, Curved AB, Circle Pivot and Last Pass
- Applied alert provides operator with audible alarm when entering into previously applied areas
- Area counter measures and displays applied area throughout application
- Elapsed time counter measures amount of time spent on current job

Droplet size classifications are based on BCPC specifications and in accordance with ASAE Standard S-572 at the date of printing. Classifications subject to change.

NOZZLE DROPLET SIZE

When selecting a suitable nozzle the droplet size is critical to ensure chemical is applied to target instead of being miss-applied as drift. Finer droplet sizes ensure improved coverage however they are also more prone to drift and conversely larger droplets are less prone to drift.

Droplet sizes are defined by ISO standards ranging from Very Fine to Ultra course.

Droplet size follow two trends:

- As pressure increases droplet sizes decreases
- Larger size nozzles provide larger droplets and increased flow

HOW TO READ AND IDENTIFY A NOZZLE

Each nozzle has a code embossed on its surface allowing the following information to be identified.

NOZZLE CODE EXPLANATION

Example of XR Nozzle 110° spray angle, 04 size made Stainless steel (VS).

NOZZLE APPLICATION RATES

The previous two pages display the ISO std application rates which apply to most nozzles.

Nozzles are colour coded according to L/min output size at 2.8 bar.

For example: All Yellow 02 nozzles at 2.8 bar (40psi) have a flow rate of 0.2 US Gallons (0.75L/min).

Note: Each nozzle type has a different droplet size profile.

SELECTING THE RIGHT SIZE NOZZLE

Application rates can be adjusted by pressure, vehicle speed and nozzle size.

Pressure can change droplet size and increase nozzles wear. Vehicle speed is an inaccurate method of adjusting output; higher speeds leads to increased bumps and vibration which is hard on equipment that can lead to critical failures. High speeds can also cause boom yaw, effectively changing boom height, leading to uneven spray application.

Nozzle size is the ideal and easiest way to select a suitable nozzle as you can change the output rate without significant changes to the machinery.

Droplet Size

1. You need to know your preferred safe vehicle speed.
2. Define your required droplet size & application rate eg. Medium droplet at 70L/h

Check the Droplet chart and you can see that a yellow 02 nozzle will provide a medium droplet at 2 and 2.5 bar.

3. Confirm against the Application Rates table the nozzle can put out the required 70 L/ha at 2 or 2.5 bar.

In the example above, a yellow 02 nozzle will be suited for use at 2.5.

WHAT DROPLET SIZE DO I REQUIRE?

The manufacturer of your chemical recommends suitable droplet sizes on the Chemical label ranging from Very Fine to Ultra Course. Alternatively refer to your agronomist.

Nozzles that produce fine droplets are recommended for post-emergence applications, which require excellent coverage on the intended target area. The most common nozzles used in agriculture are those that produce medium sized droplets. Nozzles producing medium and coarse-sized droplets can be used for contact and systemic herbicides, pre emergence surface-applied herbicides, insecticides and fungicides.

Remember, as droplet size is reduced the drift potential is increased. Where possible, choose nozzles with a slightly coarser droplet size to reduce the risk potential. Review the nozzle Droplet size charts for the appropriate nozzles capable of the required droplet size.

WHEN IS IT RIGHT TO SPRAY?

The weather has major impact on spraying conditions.

The effects of Wind on spraying can be very clear and easy to see but temperature and humidity also have critical effects that can be measured by a Delta T.

Delta T is a relative measure of Humidity vs Temperature summarised in the table (right) that indicates suitability of spray conditions. Preferably spraying should occur when Delta T is between 2 and 8; a higher Delta T has an increased chance for drift caused by evaporation when water based spraying.

WIND SPEED AND SPRAYING

Wind speeds are critical when spraying. If conditions are too windy, chemicals may not be applied correctly to the target crop leading to poor results, increased drift and possible off target damage. The table below offers a simple method of assessing wind speeds, otherwise can be more accurately measured using a Wind Meter.

Approx. Airspeed at Boom Height	Description	Visible Signs	Spraying
Less than 2 km/h	Calm	Smoke rises vertically	Spraying inadvisable
2-3.3 km/h	Light air	Direction shown by smoke drift	Avoid spraying
3.2-6.5 km/h	Light breeze	Leaves rustle, wind felt on face	Ideal spraying
6.5-9.6 km/h	Gentle breeze	Leaves & twigs in constant motion	Use low drift nozzles (medium droplets)
9.6-14.5 km/h	Moderate	Small branches moved raises dust or loose paper	Use air induction nozzles (coarse droplets)

CALCULATE SPEED IN KILOMETRES PER HOUR

$$\frac{3.6 \times \text{metres}}{\text{Seconds}} = \text{km/h} \qquad \frac{3.6 \times \square \text{ metres}}{\square \text{ seconds}} = \text{km/h}$$

$$\frac{600 \times \text{litres per minute}}{\text{Boom width (m)} \times \text{speed (km/h)}} = \text{Litres per hectare}$$

$$\frac{600 \times \text{L}}{\text{m} \times \text{km/h}} = \frac{\square}{\square} = \square \text{ Litres per hectare}$$

CALCULATE CHEMICAL TO ADD TO TANK

$$\frac{\text{Tank capacity (L)} \times \text{chemical rate (L/ha)}}{\text{Output (L/ha)}} = \text{Chemical required per tank}$$

$$\frac{\text{(L)} \ \square \times \square \text{ (L/ha)}}{\text{Output} \ \square \text{ (L/ha)}} = \square \text{ (L)}$$

Amount of chemical to add per tank

FACTORS AFFECTING CALIBRATION OF BOOM SPRAYS

1. Application rate in Litres per hectare.

2. Travel Speed of Tractor.

The tractor travel speed is the most important variable in sprayer performance. A 10% change in tractor speed gives a 10% change in application rate. This can lead to over or under application of chemicals. Determine the speed by measuring 100 metres then time in seconds how long it takes to cover the 100 metres. If spraying in hilly terrain time distance both up hill and down hill and average the results.

THE FORMULA FOR SPEED IS:

$$\text{km/h} = \frac{360}{\text{Time in seconds for 100 metres}}$$

3. Nozzle Spacing on boom

(Std nozzle spacing is 50 cm).

4. Calculate required output per nozzle:

$$\text{L/min/nozzle} = \frac{\text{L/ha x km/h x nozzle spacing (cm)}}{60{,}000}$$

$$\text{e.g.} \ \frac{100 \times 10 \times 50}{60{,}000} = 0.83 \text{ L/min/nozzle}$$

Where application rate is: 100 L/Ha, speed is 10 km/h and nozzle spacing is 50 cm. Use the nozzle output charts to select the correct nozzle tip for your application.

5. Check the calibration procedure

Use a measuring jug and stopwatch to check the output of several nozzles across the boom at the recommended pressure. If the outputs vary slightly from the chart then adjust the pressure in the system to achieve the correct volume. If nozzle flow rates are greater than 5% above or below the manufacturer's charts then the whole sprayer system needs to be checked for leaks, blockages etc,cleaned out and the calibration process repeated until accuracy is attained. The nozzle charts also allow application rates to be determined if the tractor speed, the nozzle and the spraying pressure are known.

Geoline, manufacturers of world class agricultural spraying accessories and components have released a range of ISO standard spray nozzles exclusive to Silvan.

Ideal for many applications where spray coverage and drift management is important, the Geoline nozzles offer excellent results.

TURBO TWINJET SPRAY TIPS

- All the features of the TT Turbo TeeJet, but with a double outlet nozzle that helps reduce spray drift
- Excellent canopy coverage and penetration while delivering excellent drift resistance
- Spraying pressure 20-90 psi (1.5-6 bar), ideal for use with automatic sprayrate controllers
- Best suited to applications where superior leaf coverage and canopy penetration is important
- Poly material

AIXR AIR INDUCTION SPRAY TIPS

- Pressure range 15-90 psi (1-6 bar)
- Made of a two-piece polymer construction. Excellent chemical resistance, including acids, as well as exceptional wear life
- A lower pressure air inducted nozzle offers better drift management and suitable for the broadacre market
- Compact size to prevent tip damage and removable pre-orifice
- Depending on the chemical, produces large air-filled drops through a Venturi air aspirator

AI AIR INDUCTION SPRAY TIPS

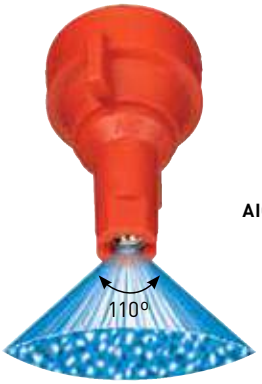

- Stainless steel insert produces tapered edge flat spray 110º pattern for uniform coverage in broadcast spraying
- Polymer insert holder and pre-orifice with VisiFlo colour-coding
- Larger droplets for less drift
- Depending on the chemical, produces large air-filled drops through the use of a venturi air aspirator
- Pressure ranges from 2 – 8 bar

AI11004-VS

AIC AIR INDUCTION SPRAY TIPS

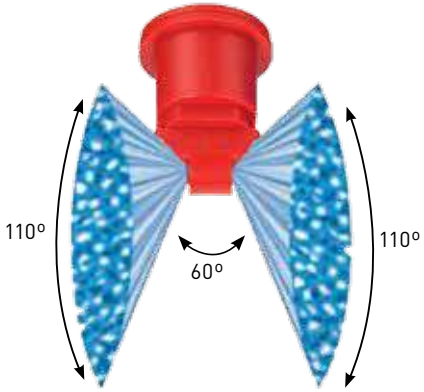

- Same droplet size as AI nozzles with added convenience of a moulded nozzle cap
- Available in stainless steel and ceramic inserts, produces tapered edge flat spray pattern for uniform coverage in broadcast spraying
- Polymer insert holder and pre-orifice with VisiFlo colour-coding
- Larger droplets for less drift
- Depending on the chemical, produces large air-filled drops through the use of a Venturi air aspirator
- AI TeeJet nozzle molded into Quick TeeJet cap provides automatic spray alignment
- Includes tightly fitting washer that assures a good seal

AITTJ60 AIR INDUCTION TURBO TWINJET

- Air induction with dual 110° flat fan patterns
- 60° between leading and trailing spray patterns
- Good coverage with increased canopy penetration and best drift control
- Best suited for postemergence applications
- Excellent drift control with coarse to very coarse droplets
- Available in VisiFlo color coded capacities (02 through 06)
- Pressure ranges from 1.5 – 6 bar (20 – 90 PSI)

LURMARK DEFLECTIP 80º–145º

LC-15

The Lurmark Deflectip produces a wide angled even spray (from 80 to 145 degrees depending on pump pressure) making it ideal for banding pre and post emergent herbicides.

- Large orifice produces coarser droplets which are less prone to drift and blocking
- Fits in most nozzle caps
- Precision moulded in tough and durable polyacetal, with a spray angle tolerance of +/- 5%

HYPRO BOOMLESS NOZZLES

Eliminate the need for a spraying boom with the durable boomless nozzle that provides efficient spray.

- Ideal for applications where a conventional boom cannot be used due to obstacles, such as power poles, fences, trees, etc.
- Common uses include orchard, vineyard, forestry, pasture, turf and golf course spraying, as well as maintaining fence lines
- Designed for herbicide or fertiliser application
- Coarse droplet size, excellent low drift option while extending spray reach
- Maintains a consistent and adjustable spray swath over a pressure range of 30-60 PSI
- Includes quick connect cap and gasket for easy handling
- Excellent durability and low maintenance
- Also available as a spray kit (see page 35)

HOLLOW CONE NOZZLES (HCC)

The ceramic hollow cone nozzles are designed for creating small droplets ideal for foliar of insecticides and fungicides and are constructed with a moulded outer over a ceramic insert that is mated to a turbulence chamber and counter-swirling device easily separated for cleaning. The ceramic nozzle allows for long lasting life and the vortexing action in the nozzle provides a 80° spray angle between 3-5 bar, but works well at both high and low operation pressures. The ceramic hollow cone nozzles are the offered alternative to the Albuz ATR Hollow cone nozzles.

HOLLOW CONE NOZZLES (TX)

VisiFlo colour-coded version consists of ceramic orifice in polypropylene body. Maximum operating pressure 20 bar. Spray angle is 80º at 7 bar. Finely atomised spray pattern provides thorough coverage.

Excellent: Post – Emergence Contact herbicides, fungicides and insecticides ensures finely atomised spray droplets reach target areas.

Good: With defoliants & foliar fertilisers at 3 bar pressure and above.

BRASS BOOMLESS NOZZLES KIT WITH SINGLE OR DOUBLE SIDED SWATH

These compact kits offer broadcast spraying, ideal for applications around obstacles that could damage a traditional boom such as fences, guardrails and power poles.

- Attaches to an ATV rack, UTV or side by side or side framework with supplied clamp
- Supplied with 600mm of 12mm I.D hose with Inline tap to turn isolate flow or turn on or off
- Supplied with both single and twin sided nozzles
- Compatible with a broad range of Silvan spray equipment

XP BOOMJET BOOMLESS FLAT SPRAY

Type 5880 Boomjet Nozzle is used for spraying areas not easily accessed with a boom sprayer. It combines two off-centre tips and three VeeJet nozzles to produce an overall wide swath flat spray. The nozzle assembly provides good distribution considering the wide pattern coverage obtained: however the uniformity is not as good as with a properly operated boom sprayer. Uniformity can be optimised by double overlapping spray swaths on successive sprayer passes. Remember this also doubles the application volume.

Supplied with one additional 1/4" NPT pipe plug and one blank tip for setting BoomJet to one side only. Also has a 1/4" NPT pressure gauge port.

Silvan nozzle holders are the easiest and fastest means of mounting spray nozzles to booms. Simply drill an appropriate size hole and clamp nozzle holder in place. The range available includes non-drip valves, swivel nozzle holders, low pressure and high pressure holders and wet and dry boom nozzle holders.

All are UV light resistant, house most standard size nozzle tips and feature self aligning quick fit caps for ease of nozzle cleaning. Applications include boom spraying, poultry shed lines, car washes, livestock races and production line cooling. All nozzle holders are supplied less tip. Merchandise packs of 4 where stated.

WET BOOM NOZZLE HOLDERS

Designed for clamping around 1/2" spray tubes. Feature a self-aligning nozzle cap and a mounting recess in the top clamp for attachment to flat surfaces. Polypropylene construction. Includes nozzle cap, gasket and screw.

TEEJET SWIVEL NOZZLE HOLDERS

TeeJet swivel nozzle bodies are primarily for use with tips employed in row crop spraying. A locknut holds swivel bodies firmly in position at a selected spray projection angle so they are not affected by jarring and vibration. For use at pressures up to 125 PSI (8.6 bar). These are also available in the QJ8600 swivel Quick TeeJet nozzle body assemblies which provide the same spray tip adjustability of a standard TeeJet threaded swivel plus the quick change and self-aligning features of the Quick TeeJet System.

Silvan 12V Diaphragm Pumps

Tough and reliable they will run dry without risk of damage.

- CORROSION RESISTANT COATING
- TWIN BEARING DRIVELINE FOR SUPERIOR LONGEVITY
- EXTRA THICK HOUSING FOR HIGHER PRESSURES
- ON DEMAND SWITCH STOPS PUMP WHEN FLOW STOPS
- EASY 12V POWERED
- VITON VALVES FOR BROAD CHEMICAL RESISTANCE
- COMMON BASEPLATE

Selected Smoothflo products with:

Constant Flow Technology
NO PULSATION!

Smoothflo is an anti-pulsation system that maintains stronger flow at higher pressures with no pulsation

Aquatec pumps are made of the highest quality and are exclusive to Silvan. Aquatec are a leading American manufacturer of pumps which are of proven durability with minimal maintenance. Constant Flow Technology provides consistent spraying without pulsation.

AQUATEC SMOOTHFLO 12V PUMP

- Smooth flow and even pressure
- 7 L/min or 120 psi max.
- Pump adapts to changes in output volume to maintain higher flows under increasing pressure
- Fitted with on/off demand pressure sensing switch

RETROFITS TO MOST BRANDS OF SPRAYERS

AQUATEC HIGH CAPACITY 12V PUMP

Used where higher volume is required such as boomless nozzle spraying and larger boom spraying.

- 20 L/min open flow
- Supplied with 5D connections: 2 x ½" and 2 x ¾"
- Rated for continuous duty for pressures up to 40 psi, above 40 psi it has a intermittent duty rating
- Fitted with ON/OFF demand pressure sensing switch

Silvan hoses are manufactured from the highest quality materials and have been rigorously tested to ensure reliable performance and durability. Ideal for most agricultural applications. The Silvan range includes delivery hose, suction hose, bypass hose. Available in sizes from 8mm I.D to 50mm I.D with pressures ranging up to 4000KPa (560psi). A wide range of hose connectors, hose clamps and fittings to suit are readily available off the shelf. All hose dimensions are inside diameter. (I.D.).

Plumbing, Filtration, & Tank Accessories

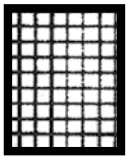

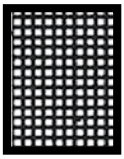

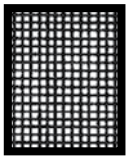

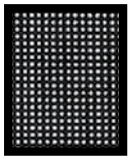

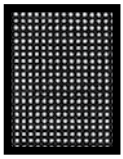

FILTRATION

Efficient filtration is an important component of every sprayer and prevents blocked nozzles, reduce or inhibit pump wear and reduce down time and expense due to repairs. Selecta offers a choice of foot, suction, pressure line, nozzle and high volume irrigation filters to suit most applications.

GRADUATED OR PROGRESSIVE FILTRATION?

Filtration is ideally applied in stages, starting with a coarse mesh progressing to finer mesh sizes as liquid moves towards the spray tip. Filter mesh is described in terms of the number of wires per linear inch, which relates to the size of the apertures through which liquid passes. The larger the mesh number the smaller the aperture and the finer the filtration.
NOTE: images below are for illustrative purposes only.

COARSE FILTRATION		MEDIUM FILTRATION		FINE FILTRATION
				
20 Mesh/inch 0.6mm Aperture	30 Mesh/inch 0.4mm Aperture	50 Mesh/inch 0.3mm Aperture	80 Mesh/inch 0.18mm Aperture	100 Mesh/inch 0.14mm Aperture

STAGES OF FILTRATION

STAGE A – INTO THE TANK

COARSE FILTRATION: Liquid passing into the tank is filtered by the foot filter or the lid basket strainer.

STAGE B – FROM TANK TO PUMP

COARSE/MEDIUM FILTRATION: Suction filters provide protection for the pump and screen out larger particles.

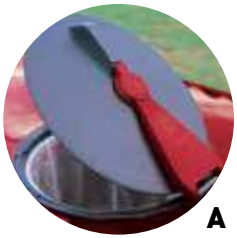

STAGE C – FROM PUMP TO SPRAYLINES

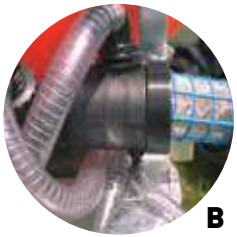

MEDIUM/FINE FILTRATION: Pressure line filters are used to remove finer particles before nozzle holders.

- Large pressure line/flushing filter is ideally fitted between pump and pressure regulator.
- Small pressure line filters are usually fitted in each boom section spray line.

STAGE D – SPRAY TIP FILTERS

FINE FILTRATION: Last stage of filtration before the spray tip, usually 50 mesh or finer.

STAGE B SUCTION LINE FILTERS

Suction line filters provide filtration to remove larger particles of grit and are ideally mounted between the tank and pump. Featuring 8mm threaded brass inserts and mounting bolts for easy adaptation to frames and chassis etc. Screw off bowl for easy cleaning.

SAR2/V and SAR3/V models feature auto shut-off action valve which closes off the supply line while removing element for cleaning.

Supplied with mesh elements and replacement elements are available.

STAGE C FILTRATION PRESSURE LINE STRAINERS

Pressure line strainers are ideal for placing in hose lines between pump and spray lines for finer filtration. They remove fine particles preventing spray tip blockage or excessive wear. Polypropylene or brass construction, mesh element standard, twist-off bowl for easy cleaning. Some models feature a clean flushing tap. Pressures range from 1000 kPa (145 psi) to 5000 kPa (725 psi) maximum, flow from 70 to 150 L/min.

TIP STRAINER WITH CHECK VALVE

Ideal for knapsacks and 12V sprayers by eliminating any excess drips. Fits all Silvan nozzle bodies.

- Ball check opens at 5psi (0.34 bar)
- Recommended for flow rates up to 3 L/min
- Available in 50 and 100 mesh screens

Note: Use of these ball check valves results in a pressure drop of 5psi (0.34 bar).

Maintaining a leak free and smooth liquid flow by using quality components and fittings is essential for maximum performance from all installations. Selecta's range of fittings are manufactured from high quality polypropylene and are compatible with fungicides, herbicides, chemical fertilisers etc, and will withstand temperatures of up to 100ºC.

Standard BSP male and female threads can be used in conjunction with each other to construct assorted types and sizes of inlets, outlets, suction fittings and hose unions or they can be used with standard brass, galvanised and other fittings.

DIESEL STAND CODE: 070-DIESELMK2

SELECTA 100, 200 AND 400 LITRE DIESELPRO/DIESELPOWER STAND

The diesel tank stand is ideal for showcasing 100, 200 and 400 litre diesel units from the DieselPro and DieselPower ranges. It features lockable castor wheels to allow the stand to be moved around the store for higher visibility and it's stronger than ever. Many stores move it outside during the day as a great way to promote the range to passing traffic.

To qualify for a FREE Diesel stand:

A minimum order of 5 units is required, consisting of 1x 100L DieselPower, 2x 200L (of DieselPro or DieselPower units) and 2x 400L (of DieselPro or DieselPower units).

SPOTPAK STAND CODE: 070-PAK

SILVAN 20, 50, 100 AND 200 LITRE SPOTPAK STAND

A $250 Minimum Order Value (Inc. GST) applies to hardware range orders. Urgent/breakdown orders don't have a required Minimum Order Value, and attract a $23 priority fee (Inc. GST).

WARRANTY

The only warranty provided by Silvan is set out on the forms accompanying the goods (for a copy please contact the Silvan Customer Service Centre). No other warranty or representation is made by Silvan. The terms of Silvan's warranties are subject to the operation of any law including the Australian Consumer Law.

CANCELLATIONS

1. Cancellations made on the day the order was placed:
a. If stock isn't dispatched, no handling fee applies
b. If stock has been dispatched a restocking fee applies
2. Cancellations made after the day the order was placed, a restocking fee will apply.

RETURNS POLICY

1. Before returning any product to Silvan, a Return Authorisation (RA) Number and approval form must be obtained from Silvan Customer Service. Goods WILL NOT be accepted without an RA number and form.
2. All returns must be requested within 14 days of the invoice date.
3. Goods will only be accepted for credit if they are returned undamaged and in saleable condition.
4. Return freight will be paid by the Customer if the goods are returned at the Customer's volition, unless authorised by the Company in writing prior to return of the goods.
5. Written claims must reference Silvan invoice numbers, and must be dated and state the reason for the claim.
6. A restocking fee will be applied if the goods have been dispatched according to the order.
7. Return of products valued under $50 (Excl.GST) won't be accepted if dispatched according to the order.

CLAIMS

Pricing & Freight Claims need to be made within 14 days of the invoice date. Any claims after this for pricing discrepancies will not be accepted. Claims for Freight Damage need to be made within 14 days of the invoice date by notifying Silvan Customer Service. Claims received after this will not be accepted.

All prices are recommended prices and exclude any dealer installation and/or freight charges. Prices may vary between individual Silvan dealers. Recommended prices are effective from 1st September 2017.

The company reserves the right to change recommended prices and specifications without notice. All items in this Price List have been included in good faith on the basis that the goods described were available at the time this book was published. Failure of suppliers to deliver in accordance with samples, descriptions, or at all, or other unintentional causes may result in some lines being unavailable. Space may prevent some dealers from stocking all items. All brand names and product names used in this publication are trade names, registered trade marks, or pending trade marks of their respective owners.
