

SERIES 84 PELMET FITTING DIMENSIONS

Overall Track Length

To allow for the installation of motors onto the track, the overall length of the track must be shorter than the wall to wall measurements, and inside pelmets, by 25mm.

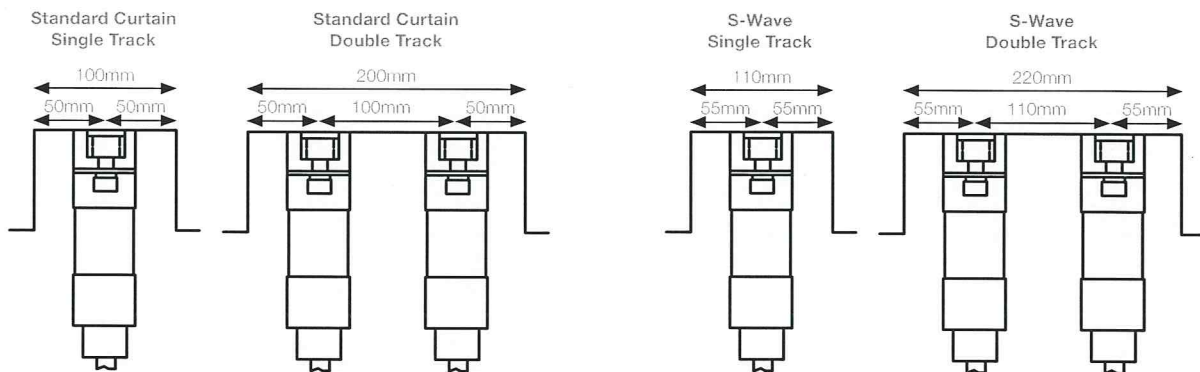

Pelmet Measurements

The pelmet measurements below are a suggested **minimum** size for a standard weight curtain. Heavier curtains will require a larger pelmet.

Note: All measurements are given for a 300mm radius bend. Large bends will require wider pelmets.

Straight Tracks

90° Bends
