

CASE STUDY

Chatswood Transport Interchange

WBS replaced over **1,900** energy efficient LED lights featuring **26 unique product** types covering a wide range of applications, including street lighting, retail lighting, area lighting, strip lighting, emergency lighting and exit lighting throughout Chatswood Transport Interchange.

For the last two years, the client had difficulties finding the replacement for the strip lights along both side of the Train station and shops causing them a lot of troubles once they failed. WBS made customised lights for the client and manufacture 200 additional lights to cover the warranty.

The client was so satisfied with WBS products, professional service and the project payback results, that they recommended WBS to install the lights for their 3 x 55 level residential towers above the concourse.
