

PRE-MEETING WORKSHOP

9.00 am - 10.45 am
5 June 2017

Variant nomenclature - How to describe sequence variants found?

The basis for reporting changes in a DNA sequence are the so called "HGVS recommendations for the description of sequence variants". In this workshop you get the chance to meet the expert and discuss the recommendations. After a short introduction and overview of the current recommendations the floor is yours. You can ask questions, discuss problems with the current recommendations, come with a practical example and ask for advice, etc. Throughout the workshop, the expert will give multiple choice problems for you to solve and test your knowledge of the HGVS rules.
