VARIETY OVERVIEW

ROCKSTAR[®] is an exceptionally high-yielding, mid-slow spring maturing variety, with a similar maturity to LRPB Trojan[®] and Magenta[®]. It has an Australian Hard (AH) and an Australian Hard Noodle (AHN) classification in Western Australia.

ROCKSTAR[®] is on average, the highest yielding mid-slow variety available in WA*. The variety delivers exceptional yields and provides a large yield improvement within the Mid-Slow spring variety class compared to Trojan[®], Catapult[®] and Magenta[®].

ROCKSTAR[®] offers an opportunity to maximise sowing opportunities and spread flowering windows during critical spring stress periods. ROCKSTAR[®] has good stem rust (MR), yellow leaf spot (MRMS) and stripe rust (RMR) resistance. It has a good grain size, good test weight and has a moderate plant height, similar to Mace[®].

ROCKSTAR[®] is an excellent varietal alternative to LRPB Trojan[®], Magenta[®], Catapult[®], and Cutlass[®].

ROCKSTAR[®] is available for planting from local resellers, Seedclub members and via Farmer to Farmer trade.
