ROUTINE ORDERS

PART I — Serial No 51.

BY — Nos 358 - 362.

LT COL C. E. MORGAN

ADM COMD

9 AUST INF BDE.

HQ 9 Aust Inf Bde (
AUSTRALIA.
5 Sep 45.

GENERAL STAFF.

NIL.

ADMINISTRATION.

358. ROUTINE ORDERS.

The following Routine Orders have been issued and will be noted for info and necessary action:-

Second Aust Army ROs 260 - 269
1 Aust Div ROs 425 - 438

359. APPOINTMENTS AND PROMOTIONS.

Second Aust Army List No 54.

360. MT SPEED LIMITS.

MT Drivers should bear in mind at all times that they are subject to the civil speed limits.

Recently the following fines were imposed at the Traffic Court, Sydney, upon Military drivers for exceeding the civil speed limit while on duty:-

(a) Spr A J MORGAN 45 mph Fined £5
(b) Pte A H EDWARDS 46 mph Fined £11

(To be republished in Unit ROs).

361. ISSUE OF TINNED EQUIVALENTS AND BISCUITS SERVICE.

To facilitate the turn over of tinned equivalents and biscuits service held in Depots, issues will be made as follows:-

(a) Tinned equivalents in lieu of perishable commodities once per week.
(b) Biscuits service in lieu of bread for consumption each Monday.
(i) Units NOT requiring full scale issue will make necessary deletions on the normal indents for supplies. NO equivalent in lieu of biscuits will be issued for consumption on Monday.

(To be repeated in Unit ROs).

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

362. DEPOSITS TO PAY BOOKS AND CASH REMITTANCES.

1. The attention of all members is drawn to the necessity for obtaining official receipts for all moneys paid to members of the AAPC.

2. The official receipts issued by AAPC personnel are two kinds, viz:-

(i) Pay Sergeants Receipts (WF176) - issued by pay sergeants and personnel carrying out pay duties within units;

(ii) Commonwealth of Australia Official Receipts (as used in all Commonwealth Government Departments) - issued by paymasters of formations and depot cash offices.

Deposits to Pay books

3. Credits arising from cash deposits appearing in members' pay books are only accepted as bona fide in cash offices if one of the above receipts for the amount of the credit is affixed to the back of the pay book. Unless this credit entry is so supported, no portion thereof can be drawn until confirmation is obtained.

Cash Remittances

4. Upon completion of a Cash Remittance (Form WF131A) the remitter must receive from the member of the AAPC concerned one of the above receipts for the amount paid by him, the number of which should be quoted in any inquiry relative to same.

5. It is the responsibility of all members to obtain receipts for all moneys paid to members of the AAPC.

(To be repeated in Unit routine orders)

2. OPS (Based on infm received at HQ Second Aust Army up to 1300 hrs 30 AUG

SOLOMONS.

Allied ops on NEW GEORGIA resulted in the occupation of portion of BAIROKO HARBOUR on 24 AUG, and culminated in the cessation of all organised enemy resistance on NEW GEORGIA proper on 26 AUG. The occupation of the remainder of BAIROKO HARBOUR was completed without opposition, and there were indications that the enemy had evacuated from posns on DRAGON PENINSULA (between BAIROKO and ENGGAI). 20 vehs and a large quantity of stores were captured.

Allied tps later occupied islands west of BAANGA IS also ARUNDAL IS and islands to the South of ARUNDAL without opposition.

Increased enemy shipping has been sighted in the SOLOMONS, and activity of combat vessels has been reported.

Successful heavy Allied raids were made on installations etc at KOLOMBANGARA, and in the SANTA ISABEL and CHOISEUL IS Areas.

NEW BRITAIN - NEW IRELAND.

Increased enemy shipping entering and leaving SWPA has been observed in the ST MATTHIAS IS area. Between 23 and 28 AUG a total of 19 combat ships and approx 62,000 tons of merchant shipping passed through this area. On 28 AUG a hospital ship of 9500 tons moved from the RABAUL area, course NW, past CAPE SIEMENS.

Submarine activity around the South coast of NEW BRITAIN continues.

In NEW BRITAIN bombing and strafing attacks were made on GASMATA.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

NEW GUINEA.

SALAMAUA AREA.

In the coastal sector Allied pressure was maintained on enemy posns on NW and North of ROOSEVELT RIDGE, in spite of repeated enemy counter-attacks. Advancing North from ROOSEVELT RIDGE our tps surrounded an enemy posn and killed 24. The enemy was reported to be digging in 200 yds NW SCOUTS CAMP (junction BULAMBUN and NUK NUK tracks) and another posn 1000 yards NW SCOUTS CAMP was being attacked by our tps. An enemy gun located 2400 yards North BULAMBU was neutralised. Organised enemy resistance South of line SCOUTS CAMP - NO 1 CAMP (1600 yards NW by W SCOUTS CAMP) - point 1400 ESE OLD VICKERS posn has ceased but patrol clashes continue to the North.

In the central sector an attack by our tps on an enemy posn 400 yards East of No 1 CAMP failed to make any progress, and our tps were last reported attempting to locate the enemy's flanks. One Allied patrol discovered 11 recently evacuated pill-boxes 1¼ miles South KENNEDY'S CROSSING in a perimeter defensive posn and later encountered LMG ¼ mile North of this posn.

Heavy fighting in the BOBDUBI sector resulted in slight advances by our tps inflicted heavy casualties on the enemy. Enemy pill-boxes on KUNAI SPUR (1500 yards ESE OLD VICKERS) were cleared after two attacks. Attacks on strong enemy posns in the vicinity of the junction KOMIATUM-SALAMAUA tracks (1200 yards SSE OLD BOBDUBI) were made from East, South, West and North across the FRANCISCO RIVER, resulting in the destruction of 2 pillboxes and 31 Japs being killed 20 wounded. An enemy attempt to break out of this posn by counter-attacking Westward was repulsed with 47 casualties.

North of BOBDUBI the Allies have established a firm base on high ground 2½ miles West LOGUI NO 2 and 3 miles West LAPUI POINT. From this base our tps advanced East and SE causing the enemy to flee Eastward abandoning all eqpt. An Allied patrol crossed the FRANCISCO RIVER and engaged the enemy 2000 yards North of KENNEDYS C CROSSING. A party of approximately 60 Japs met by an Allied patrol 1¼ miles West of SALAMAUA footbridge immediately dug in.

Later an enemy force of approximately one Coy of fresh tps attacked our posns 2¼ miles West of the footbridge forcing our tps to withdraw 600 yards after killing 40 of the enemy. Our tps 1½ miles West of the footbridge and 1 mile SW KELA VILLAGE also withdrew westward.

LAE - MARKHAM VALLEY.

Enemy activity in the vicinity of NADZAB and PESEN incl the burning off and clearing of an island, appears to be part of an organised defence plan. Natives are observing for the enemy in a series of observation posts from GABMATZUNG East of NEW LABU IS. There have been frequent crossings of the MARKHAM RIVER near NEW LABU ISLAND, by motor launch carrying pers both ways, and it is believed that the outpost garrison at MARKHAM POINT has been relieved.

NE[illegible] GUINEA.

WEWAK.

Two further heavy attacks were made on WEWAK - first by 39 bombers and 64 fighters which dropped 112 tons of bombs and later by 34 bombers and 44 fighters. In these ops, 2 of 20 intercepting fighters were probably destroyed and 25 of 30/40 shot down. Buildings, heavy A/A posns and a number of grounded A/C were destroyed

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

SEPIK.

One enemy patrol is reported by natives to have occupied LUMI about 21 AUG and another party is believed to have occupied KUYINMUS LAKE on 14 AUG, but it is doubtful if they are still there.

Japanese A/C are reported flying regularly up the SEPIK VALLEY to junction YELLOW and SEPIK rivers. Landing-places for flying boats are believed to exist amongst the numerous lakes in the area.

6. ENEMY ARMAMENT AND EQUIPMENT.

NEW TYPE LANDING BARGE. SECURITY.

A large barge has been encountered for the first time in the BUIN-FAISI area. Little is known about this craft except that it is approximately 100 feet long, can do 15 knots and is heavily armed (probably 40 mm or larger) and armoured. The appearance of this type of craft probably indicates that an increased number of barges will be used in coastal movements.

(HQ Second Aust Army Int Rev No 71).

EXPLOSIVE FLOATING "YELLOW BOX". SECURITY.

Further to the info contained in 9 Aust Inf Bde Int Summary No 22 the following report of a similar nature has been received:-

From SPA. "On Tuesday morning, 10 Aug, an airplane flying between NEW CALEDONIA and SANTO, while in posn approximately 5 miles North of MALEKULA, sighted what appeared to be a flare burning on the water. While circling to investigate, a large explosion, causing a bubble about 30' in diameter, was observed. This explosion, while not in the exact posn of the burning flare, was in its close vicinity."

Comment: This supports the theory advanced in 9 Aust Inf Bde Summary No 22 that the explosion is actuated by sonic means when an airplane approaches the object. To this may be added the possibility of the employment of flares in the vicinity of the box to act as a decoy, luring any airplanes flying within observational distance. Although no mention of a box is made in the above report, it is reasonable to assume that something similar was employed since the explosion occurred at a distance from the flare, on which all attention was naturally directed with the probability that a less evident object would be overlooked.

(HQ Second Aust Army Int Rev No 71).

JAPANESE 25 MM AA SHELL. SECURITY.

Details of the 25 mm AA Tk A Gun were published in 9 Aust Inf Bde Int Summary No 18.

Drawing of the 25 mm AA Shell appear as Appx C hereto.

(HQ Second Aust Army Int Rev No 50).

SOLOTHURN SUB-MACHINE GUN. SECURITY.

For sketch see Appx B to this Summary.

This weapon is identical with German 9 mm Solothurn Sub-Machine Gun as described in Small Arms Manual by Lt-Col J.A.Barlow S A C, excepting for the calibre of the bore of the barrel.

GENERAL PARTICULARS.

Method of Operation: Automatic action brought about by projection of spent case and return spring. Action is unlocked and is simple blow back principle.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Weight (without magazine)	9½ lbs
Length	32¼ inches
Capacity of magazine	30 or 32 rounds
	Box type
Type of fire	Single and automatic controlled by change lever
Rate of fire	700 rounds per minute
Type of sights	Open
Range of adjustment	0-500 metres

OUTSTANDING FEATURES.

Barrel - Length 8⅓ inches. Bore 6.73 mm or, approx .30 inches. Barrel is locked to body by means of a right hand threaded screw on the chamber end. At the muzzle end, the portion between the nut and muzzle performs the action of a bayonet boss, the bayonet catch being locked on the bayonet fitting on the right side of the body. The collar on the muzzle end, when the barrel is screwed into its posn, acts as a stabilizer for the barrel by fitting neatly into the body.

Magazine Housing - The housing is taken off from the body at an angle for purposes of tilting the nose of the top round in the magazine forward towards the chamber to facilitate the feeding of the rounds into the gun. There is a device on the housing to assist in magazine filling. On the underside a recess is cut to take the magazine, the magazine is inserted vertically and is held in position for filling by the magazine catch provided. The top of the housing has been cut and so shaped that it forms a charger guide to fill magazine held below.

Sights - The foresight is a barleycorn type with protectors. The backsight is a leaf, slide and ramp type, similar to the S M L E rifle No 1 Mk III. The leaf is graduated from 0-500 metres, the slide is set to ranges by means of slide catch which engages in recesses on left side of the leaf. The block of the sight has a V cut for sighting purposes.

Safety Catch - The safety catch is located in front of the backsight. When the catch is to the rear, against the sight, the posn is at fire. Forward against the stud, posn is at safe. The operation of the safety catch is brought about by means of a flat steel spring, which, when catch is in fire posn, removes the stud on underside of the spring from the recess on bolt, thus allowing the bolt to move backwards and forwards. When the catch is in the forward posn the spring is forced down engaging stud in recess on the bolt, locking it in a posn of safety, and so not allowing it to move either backwards or forwards. Two recesses are cut in bolt to allow the catch to be applied both when the action is to rear or cocked posn or when forward in fired posn.

Bolt and Bolt Way - The upper half of the boltway is detachable being hinged to the body by means of a pin, near magazine housing. When hinged portion is in correct posn it is locked to the remainder of the body by a catch situated at the end of the body, this catch is unlocked by pressing in but cannot be operated unless milled stud on top of body is depressed. The bolt head carries the normal feed pieces on the left while on the right is situated the extractor. At the rear end of the bolt is found the base plate on which is hinged the return spring rod. The base plate is removed by turning ¼ turn to the corresponding recesses in the bolt. A projection on right of the plate locks plate in posn by itself being held in posn in cocking handle slot. The cocking handle is held in its fixed posn by stud on inner side of base plate engaging in recess in cocking handle pin.

Return Spring - The return spring is housed in a hole bored down the butt, the forward end has a cup shaped cap to take the tail of return springrod while on the rear end is attached the return spring cap which locks the spring into posn. To remove the return spring, open the trap in the butt plate, depress cap and turn to left ¼ turn, control spring when removing from housing.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Trigger Mechanism and Charge Lever - Midway and on the left of the body is situated the charge lever which has two posns. Set forward with the letter D exposed on the side plate, the gun will fire automatic. Set to the rear with the letter E exposed the weapon fires single rounds. The letters E and D are interpreted as follows:-

E for Einzig (German) meaning single
D for Doppel (German) meaning double or more than single

The change lever and trigger mechanism work in conjunction with each other, the operation being similar to that of the Bren LMG. When the change lever is set to automatic and the trigger is pressed the sear is disengaged from the bent and allows the action to move backwards and forwards and it will continue to do so, so long as trigger is pressed.

When change lever is set to single rounds, a tripping lever is forced above the bottom of the bolt way. When trigger is pressed the bent strikes against and forces down the tripping lever, disengaging the trigger from the sear which engages in the bent, the next time the action comes to the rear. The trigger must be released and pressed again to fire another round.

Body Casing for the Barrel - Designed to act chiefly as a radiator for cooling the barrel, and as a stabilizer also to provide a suitable foundation for the bayonet fitting and foresight.

Stock - The stock is of one piece and on the right side is provided a groove to act as a grip for the fingers of the left hand.

Swivels Sling - Swivels are positioned at muzzle end of body and on butt to take a leather sling.

Remarks - This weapon was manufactured under the terms of the VERSAILLES Treaty, when Germans and Austrian factories were forbidden to manufacture weapons of the 9 mm military calibre, but this weapon is so manufactured that it will accommodate an interchangeable 9 mm barrel and allow the use of a magazine holding similar calibre amm. The date of manufacture of this weapon can be taken as between the time of the signing of the Treaty and the repudiation of it by the German Government.

It is emphasised that the only modification necessary to convert from 7.63 mm to 9 mm is the interchange of barrels, no change is necessary in magazines.

(Supp to HQ Second Aust Army Int Rev No 24).

JAPANESE AIRCRAFT. SECRET.

The third of a series of appendices containing infm on enemy A/C is attached hereto, the plane being the Japanese Type 99 D/B 'VAL'.

(HQ 1 Aust Div Int Summary No 88).

16. SECURITY AND CENSORSHIP.

MILITARY SECURITY - KIT STORES.

Recently, on orders of an Independent Unit which had been operating in S W P A, a copy of a report by the Commander of an Inf Brigade on ops in the MIDDLE EAST, a number of aerial photographs of various areas in the MIDDLE EAST, were found in kits deposited by Army pers in an Australian Kit Store.

Although the documents were out of date, there is no doubt that they still contained infm that would have been of value to the enemy had it come into his possession.

(HQ Second Aust Army Int Rev No 71).

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

SECURITY.

LITTER.

One of the problems of civic administration is that of keeping the city parks and streets free from rubbish. To this purpose a large amount of money is provided annually to pay for the cleaning up of the litter discarded by thoughtless citizens.

In the Army the same habit exists, and although receptacles are provid and an attempt is made to educate the tps in their use, "emu parades" are often necessary to make a complete clean up of the area.

If a camp or bivouac site has to be vacated in a hurry, one of the most essential duties, that of a last minute Security check is apt to be overlooked - although it is part of the normal "drill" for all ranks on such an occasion.

Some few months ago a bn preparing for an overnight move and emplanement at first light, omitted to arrange for the final check. After its arrival in the new area an explanation was called for following the discovery of various official and personal papers in the camp site lately vacated.

Shortly afterwards a patrol from this unit discovered a recently vacated Japanese camp , and during the temporary absence of the enemy a thorough search was made and all scraps of paper were collected.

These were examined by the same Int offr who had previously handled the examples of Australian litter described above, and it was noticeable that the two examples were similar in composition.

A detailed examination of the Japanese specimens gave several old postcards and envelopes bearing the unit identification; a page from an offrs note book containing notes of an impending op and the draft of two signals; a tattered paper fan bearing the name and unit of the late owner, and the first page of a soldier's letter home.

The infm obtained from these apparently worthless scraps enabled deductions of enemy strengths and dispositions in the area to be made.

In forward areas the question of "litter" is all-important and unit Security offrs should ensure that all obsolete documents and personal papers should be carefully and systematically destroyed.

The Japanese themselves have begun to realise the leakage of infm by this means and an order issued at MUBC on 4 JUL 43 incl the following instn "All units to leave the present location will thoroughly consider counter-intelligence and burn each scrap of paper or documents."

If the Japanese consider such precautions to be worthwhile, so must we, and our motto in arranging to vacate a camp site or bivouac area should be

"Consider the enemy counter-intelligence".

(HQ Second Aust Army Int Rev No 71).

Appendix "C".

9 AUST INF BDE INT SUMMARY NO 24.

JAPANESE 25 MM AA SHELL.

ACTION OF FUSE -

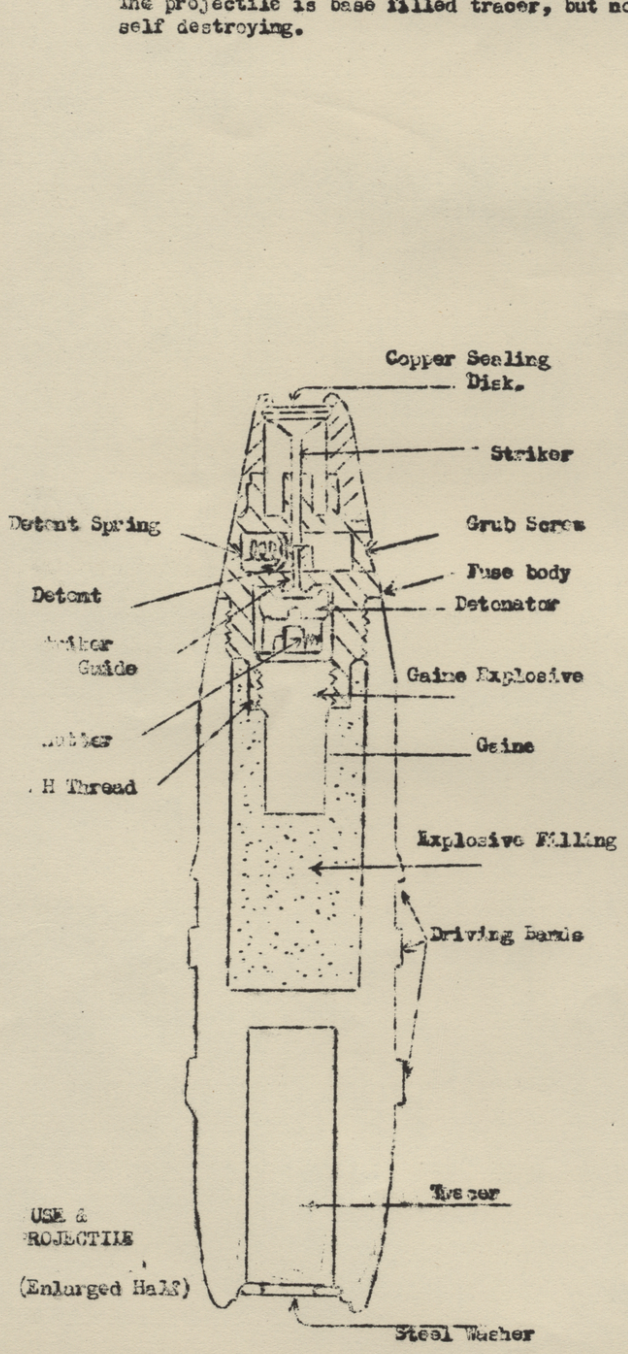

On acceleration the striker sets back retaining the detent, and preventing prematur until the projectile is well clear of the muzzle.

When de-acceleration sets in, centrifugal force is responsible for two (2) actio

(1) The detent is thrown out against the detent spring, thus allowing the needle to ride on the detonator

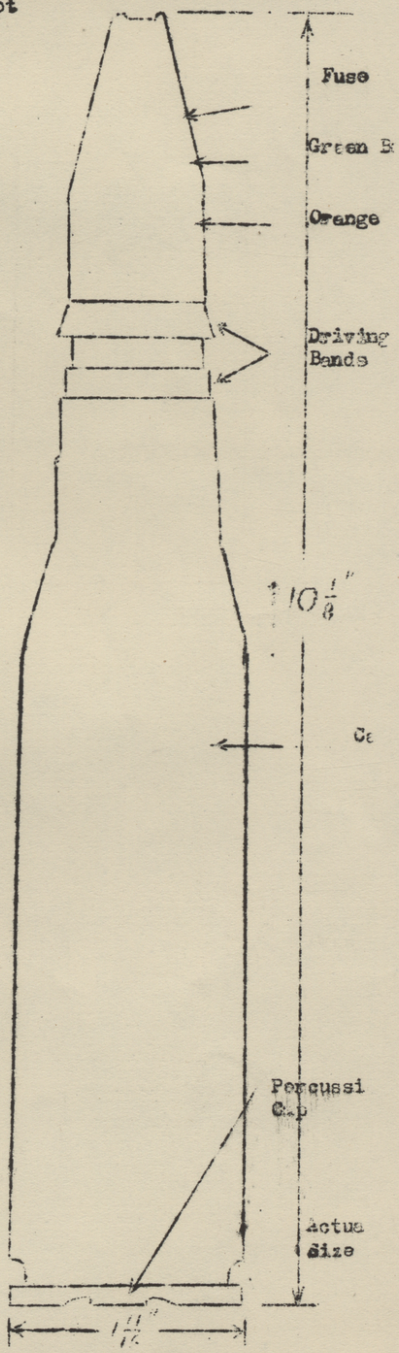

(2) The shutter is swung out against its spring, revealing a small flash hole, which completes the train of detonation to the gaine explosive. On impact the needle is forced into the detonator and the flash passes through the a flash hole to the gaine explosive, which detonates the explosive filling.

The projectile is base filled tracer, but not self destroying.

USE & PROJECTILE

(Enlarged Half)

APPENDIX TO 9 AUST INF BDE INT SUMMARY NO 24.

"VAL"

(Navy)

Type 99 D/B

Originally manufactured by: Aichi

Crew: Two

Engine: One Kinsei (Goldstar) 44, 14 cylinder, twin-row, air-cooled radial, rated 990 horsepower at 13,000 feet.

Dimensions: Wing Span 47'7" Length 32'5" Height 10'0"

	Empty	Full Military Load	Extra Fuel
Weights	5,900 lbs	8,070 lbs	

Maximum Speed: 240 miles per hour at 13,000 ft.

Rate of Climb:

Service Ceiling: 26,000 ft.

RANGE.

	Range in Statute Miles	Cruising Speed	Bombs	Fuel Imp Gal	Fuel U.S.Gal
Max Cruise	450	204	550 lbs	135	162
Normal	875	190	814 "	225	271
Extra Fuel	1035	190	550 "	260	313
Extra Fuel	1320	140	Nil	260	313

Radio: Two-way W/T.

Armour: Nil

Armament: 2 x 7.7 mm machine guns, top forward cowling synchronised through airscrew.
1 x 7.7 mm machine gun, flexible, in rear cockpit.

Ammunition:

Vulnerability: Tanks are not self-sealing.

Remarks: Later model probably has more powerful engine. A Type 99 Mark 2 version of this A/C is known to exist.

NOTICES.

GIFT PARCELS FOR UNITED KINGDOM ADDRESSEES - DUTY FREE
(Para [illegible] No.

1. A concession has been sanctioned by the United Kingdom authorities which permits members of the AMF and the British Army, serving in Australia, to send to their relatives and friends in the United Kingdom four (4) gift parcels a year, duty free. The usual postage rates are payable.

2. Such parcels must not weigh more than 5 lbs each nor exceed 30/- in value, and contents may not include :-

(a) any drinkable spirits;
(b) more than ½ lb total weight of tobacco, including cigars and cigarettes (200 cigarettes or 50 cigars = ½ lb), or any tobacco goods marked "H.M.Ships only";
(c) more than ½ pint of scent;
(d) more than 2 lbs of any foodstuff;

3. Special Customs Declarations (Army Form W5192) will be affixed to the parcels; these will be secured through normal stationery channels for issue, under unit arrangements, on a basis of a maximum of four (4) a year to any one sender. A comparatively few forms should suffice for needs of any one unit, and each form issued therein will have entered upon it the recipient's number and name and be signed by the issuing officer in the space provided.

4. It is stressed that full duty will be charged on the contents of parcels which infringe restrictions expressed in para 2.

(To be repeated in unit routine orders).

INTELLIGENCE REPORT FOR WEEK ENDED 11 SEP. 43.

Based on information received up to 1200 hrs. 10 Sep. 43.

HQ 9 Aust. Inf. Bde. (AIF),
Australia.

1. (a) Ops. - Own Tps. Nil.

(b) Location - Own Tps. BnHQ situated at DAPTO CAMP (KIAMA 782373).

(c) Training.

Available Officers and senior NCO's have trained in R/T procedure, TEWT's, Approach and First Contact, Patrols and Gas Intelligence.

Permanent duties have continued training one hour per day in gas and weapon trg.

Unit M/C School has covered the following subjects:- Lecture, Internal Combustion, Engine, Riding Practice and Maintenance.

The Tk/A Pl. commenced their new syllabus on 5 Sep. 43 and have completed to DAY 4. The syllabus covers Mechanism Gun Drill etc.

Carrier and Mtr. Pls. have continued with driving and maintenance instruction.

M/T personnel have been occupied in maintenance prior to and during the AEME inspection.

16. TOPOGRAPHY - Affecting own tps. Nothing to report.

17. TOPOGRAPHY - Affecting Enemy tps. Nothing to report.

19. SECURITY.
(a) Information: Rumours of impending moves have sprung up since the commencement of the DP1 check. All appear quite unfounded.
(b) Personnel: Nothing to report.
(c) Material: Precautions seem adequate.
(d) Operations: Nothing to report.
(e) Censorship: No serious breaches have been reported.
(f) Suspected Personnel: Nothing to report.
(g) Security:
(i) External: Nothing to report.
(ii) Internal: Generally good. Allied activity in NG has induced in tps a further feeling of confidence in the ultimate outcome.
(iii) Educational: Short talks on security have been given to tps in conjunction with discussion of Int. summaries.

2. OPERATIONS (based on infm received at HQ Second Aust Army up to 1800 hrs 6 Sep 43).

SOLOMONS.

Fighting in the NEW GLORGIA Gp has continued on ARUNDEL IS where enemy tps are fighting a delaying action.

On 3 Sep it was confirmed that the Japs had evacuated SANTA ISABEL.

Enemy air activity in the area consisted of five attacks on Allied posns on VELLA LAVELLA and an unsuccessful attack on Allied shipping off the coast of the island. In the latter engagement 5 divebombers were destroyed by our fighters.

Allied air attacks in the area were again directed against enemy posns, barges and radio station on KOLOMBANGARA and his adv air base at KAHILI.

NEW IRELAND - NEW BRITAIN.

A considerable tonnage of merchant shipping consistent with the enemy's commitments continues to stage through the NEW IRELAND area. During the week ended 6 Sep, 3 naval vessels and approximately 15,000 tons of merchant shipping moved in from the North past the ST MATTHIAS GROUP, and 2 destroyers and at least 25,000 tons of merchant shipping moved out to the NE. 2 cruisers and a destroyer moved via CAPE ST GEORGE towards the SOLOMONS.

A sighting of RABAUL HARBOUR on 3 Sep reveals a drop of 20,000 tons in merchant shipping in the harbour since the previous sighting on 13 Aug. The photographs, however, did not give complete coverage. Small craft, barges and submarines are still active along the coast of NEW BRITAIN.

Allied attacks on shipping and barges in the area resulted in one freighter transport, one 7000 ton cargo vessel and one stack aft vessel (1500/2500 tons) damaged by hits or near misses, possible hit on 500 ton cargo vessel and at least 56 barges and 2 launches destroyed.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

CAPE GLOUCESTER and GASMATA airfields were neutralized prior to Allied landing in the HUON GULF Area.

A light raid was made on an airfield in the RABAUL Area on 3 Aug starting fires.

NEW GUINEA.

SALAMAUA.

In the coastal sector Allied tps made several short advances. Allied patrols occupied an abandoned Jap perimeter defence 2000 yds NW BULAMBUN and cleared Jap posns from the Southern slopes of SCOUTS CAMP ¼ mile NW of LOKANU by 2 Sep. The following day a patrol occupied an enemy posn 700 yds North of LOKANU.

On 5 Sep enemy were located at the NW end of ROOSEVELT RIDGE, on the higher ground around SCOUTS CAMP and on the nigh ground on the West and NW of the track junction 1500 yds NNW LOKANU PENINSULA.

MARKHAM VALLEY.

On 4 Sep our tps located an enemy posn with many booby traps in the vicinity of MARKHAM POINT.

Allied tps who moved against NADZAB established themselves at KIRKLANDS (South Bank of the MARKHAM 7 miles West of NADZAB) by 5 Sep. The North bank of the MARKHAM between the ERAP and RUMU Rivers was reported clear of the enemy.

LAE.

At 0700 hrs on 4 Sep preceded by naval and air bombardment Allied tps made a successful landing on two beaches near the BULU RIVER and established a bridgehead from the coast North to the BULU village West to the BULU River, then South to BULU Mouth. The second force landed in the vicinity of BUSO and consolidated an area from the mouth of an unnamed river (1½ miles West of BULU RIVER), North along river for 1½ miles West to BUSO RIVER to a point 2½ miles from the mouth, then South to BUSO mouth.

At 1400 hrs the landing force commenced an adv West towards USOM (¼ mile North of TALI) and SINGAUA PLANTATION (BUIEM RIVER). By midday of the following day the forward tps had reached TALI (2 miles North of the BUIEM RIVER Mouth) and a point 1 mile NE of APO (NE end of the SINGAUA PLANTATION).

MADANG RAMU VALLEY.

Our patrols on 29 Aug contacted the enemy in the vicinity of ARONA. A series of villages or possible camp sites were seen to the SE of MARAWASA. A recce patrol to USINI (WO 2588) was attacked on 25 Aug and withdrew. In the same area the enemy attacked a small party of our tps at FAITA.

4. ENEMY TACTICS METHODS AND HABITS. SECURITY.

JAPANESE RAIDING PARTIES.

An attack was made on an Allied gun posn by one of these parties during the SANANANDA ops and on 16 Aug, similar tactics were employed in two attempts to destroy some of our guns in the LAKE SALUS Area.

It is known that the organisation of these parties is flexible, strength varying from forty to sixty according to the specific task. For the attack on our guns in the LAKE SALUS area, documents show that the party was probably divided as follows:-

Demolition Squad : From fifteen to thirty men divided into five groups, each of four groups being assigned one objective, one group as reserve.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Support Squad : About one rifle section, to be used as a reserve for the Demolition Squad if required.

Protection Squad : About one rifle section to cover flanks etc.

One week's sups to be carried. Each man was to carry three or more grenades and the Demolition Squad also had three packs of explosives, two armour piercing mines and smoke candles.

The necessity for a detailed study of the ground and maps was stressed particular attention to be paid to exact location of, and ways of approach to the gun posns.

Features of the tactics to be employed were wide flanking movement to disguise intention and the final assault under cover of darkness. However the last attack on 16 Aug was actually made at 1100 hours.

The advance of the Demolition Squad was to be covered by small arms fire from the Support Squad whilst the Protection Squad, using smoke candles, covered the flanks. Grenades were to be used freely to cause confusion.

A bundle of grenades thrown down the muzzle was suggested as a means of destruction, or, for better results, the "armour piercing mine" or explosives were to be attached to the muzzle.

(HQ Second Aust Army Int Rev No 72).

6. ENEMY ARMAMENT AND EQUIPMENT. SECURITY.

JAPANESE BOOBY TRAPS.

Many instances have been reported recently of "booby traps" being encountered by our tps on entering enemy posns.

Some traps have been made from Australian grenades (presumably M36) fitted with instantaneous fuzes, whilst a Japanese grenade fitted with a MURRAY switch (push-pull mechanism) was encountered.

A feature of the enemy withdrawal from the ORODUBA-GWAI-BOLOM area was that "booby traps" were left in all posns without exception and this can be expected in all cases where voluntary evacuation has been made.

(HQ Second Aust Army Int Rev No 72).

JAPANESE WAR MATERIALS.

Attached as Appendix B to this Summary is a supplement containing infm on Japanese weapons.

(Supp to HQ Second Aust Army Int Rev No 71).

JAPANESE 81 mm SMALL MORTAR TYPE 99.

Details and photographic reproductions of the above are contained in Appendix B to this Summary. This type of mortar is known to have been used by the enemy in the SOLOMONS and, although they had not been encountered in NEW GUINEA, it was suspected that 14 Fd Arty Regt brought some from RABAUL.

It has been reported that two of this type were found in the KOMIATUM Area on 24 Aug and it is probable that others will be used by the enemy in the SALAMAUA Area.

(HQ Second Aust Army Int Rev No 72).

JAPANESE DEMOLITION CHARGES.

A demolition charge measuring approximately 6 x 6 x 4 ins was found in the VICKERS RIDGE Area on 16 Aug.

Examination reveals that it consisted of a number of high explosive packets of "MELINITE"(Japanese equivalent of "LYDDITE") grouped together in a copper container. Two detonators of approximately 30 grains each were moulded into the charge and fired by means of a gun powder fuze.

It is thought that this explosive would be used as a delay demolition charge for destroying their own eqpt to prevent it falling into our hands. Action corresponds in principle to the delay pencil and TNT slabs.

The following extract is from 3 Aust Div Intelligence Report No 119 of 24 Aug:-

" A long rifle captured on the Eastern slopes of BOBDUBI RIDGE on 24 Aug was fitted with a tripod and an attachment on the side of the breach apparently for a telescope."

(HQ Second Aust Army Int Rev No 72).

JAPANESE AIRCRAFT.

The fourth of a series of appendices containing infm on Jap A/C is att hereto, the plane being the Jap Navy TYPE 95 RF/P DAVE.

(HQ 1 Aust Div Int Summary No 89).

16. SECURITY.

The following extract from "INTELLIGENCE LESSONS FROM NORTH AFRICA (Operation 'TORCH') up to 1.3.43" clearly shows the value of F S Wing pers in combined ops :-

"It is realised that in landing ops the conveyance of the maximum number of fighting tps is paramount and that the arrival of pers for security purposes must be arranged for the later stages. At the same time, the usefulness of the F S S in searching for documents, arresting and examining suspects, preventing illicit communication, was clearly demonstrated. Where senior offrs were on the spot to insist that FSS were landed in good time to give effect to their duties, valuable documents were seized, enemy or hostile pers were captured and the situation from the security angle was adequately controlled by FS pers. Where this backing was lacking, security pers remained in the boats and valuable opportunities were lost which did not recur."

(HQ Second Aust Army Int Rev No 72).

CARELESS QUESTIONS.

Attached as Appendix A are some interesting comments on careless questions, motives, mthods and types.

UNIT CENSORSHIP.

In January this year 5.3% of franked mail sighted by Fd Cemsorship required further treatment. This figure was reduced in July to 2.8% but there still remains a certain amount of inconsistency and lack of insight on the part of many franking offrs, who allow to pass such infm veiled references to movement and location as -

".....if you dont hear from me for a while dont worry it'll only be because we are in such a posn that I wont be able to get letters away to you".

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

"....cant tell you where I am but the place is covered in coconuts and Fuzzy Wuzzies....."

One common practice is that of excising place names, or a word or two only, from an offending sentence. It is apparently thought that by this method the meaning of the sentence is destroyed. IT IS NOT. More often than not, after such treatment, the infm intended to be conveyed is still easily understandable.

For example, despite the obvious deletion of "New Guinea" and "Nip" the following passage clearly imparts its message :-

> "We were issued with "greens" today so it looks like its true alright (deleted) for us and a crack at (deleted) at last. Maybe Ill run into Fred up there. Hope I do ....."

Excision of passages in their entirety is the only safe method of treating such cases as these.

It is only by thorough and consistent franking that the percentage of franked mail requiring further treatment can be reduced, and the degree of efficiency, so necessary and so much desired, may be reached.

The following article was extracted from Combined Press :-

> "A magnificent exhibition of courage and [illegible] devotion and duty though seriously wounded was given by an offr of a Home Counties regiment during Wednesday's attack at Francoforte. He was in a Bren gun carrier which was hit by a mortar. The offr and crew jumped out all wounded but were surprised to find themselves alive. Another mortar bomb caused more wounds and the offr began to help the crew away to safety. When the men had been taken out of range he came back for maps, notebooks etc, which were in the carrier when he received severe wounds. In order to prevent further shooting the offr shammed dead and managed to alleviate to some extent the pain of his wounds with a couple of morphia pills. The situation was most difficult by the fact that he was under observation and could not move. Nevertheless during the long hours of daylight he managed to eat a notebook page by page and shewed up a map so that the enemy, if they picked him up would be unable to get any infm from them. The offr, however, was brought in by our own tps."

(HQ Second Aust Army Int Rev No 72).

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

APPENDIX A

A.U.S.T. JUNE BOB INT SUMMARY NO 25

CARELESS QUESTIONS - MOTIVES, METHODS AND [illegible]

In all that has been spoken and written about careless talk there has been not enough emphasis on the careless asking which sometimes prompts it. Careless talking is seldom deliberate, but careless asking is sometimes calculated and almost scientific. The MOTIVES of the enemy agent differ from those of one's sweetheart or mess crony, but his METHODS will be identical.

MOTIVES -

The Polite Question -

The most common form of careless question is asked by somebody who neither wants or expects an answer. Such is often a mere gesture of welcome, salutation or interest. Yet even "How's tricks?" or "How's things?" can elicit from the garrulous, vain, excitable or anxious to please young man a flood of information.

Conversational Exchange -

In the second form A asks B a question about his job, not because he is in the least interested in B's job, but because he wishes B, on whose conversational cues he thinks he can rely, to ask him a question about his job - which he is longing to answer. This type of careless question, the prelude to a straight swop, is particularly dangerous because it involves at least two indiscretions.

Questions by Parents, Wives, etc -

The third is by far the most difficult not to answer. It arises in most people a strong sense of proprietary. This is particularly true of one's parents. For many years, it was their job to keep us out of mischief. "Go and see what little Tommy's doing and tell him he must'nt." Family pleading is hard to resist. Even when there is no pleading, the habit ingrained in so many of us of getting it off our chest to the person we love is not easily denied.

Never is this habit more hardly broken than by those of us who were loyal to the tradition of "writing home" every week. But broken the habit must be. Even the pillar box is no longer sacrosanct.

COMMON Gossip and Inquisitiveness -

The motives of the common gossiper need no comment. He will [illegible] information in order to build up his stature by "retailing" [illegible] ible, and usually we remember to beware of him. Beware of him particularly when he indulges in flattery.

Patronage -

In Service circles the relationship between ranks give birth to [illegible] types of careless questions, all difficult to ignore. [illegible] asked by Service people, these questions are too often thought safe to answer. First there is the question asked, usually out of politeness sometimes out of a wish to patronise, by the Senior of the Junior Officer. The Junior Officer because he is anxious to please, or because he does not wish to seem discourteous or because he misunderstands the technique of discipline or is overawed, nearly always finds such questions too embarassing to ignore or to refuse to answer.

Currying Favour -

Second, there is the question asked by the Junior of the Senior Officer. This may spring from simple vanity on the part of the Junior. He wishes to appear as a superior fellow, with breadth of vision and understanding. Or he may have a thirst for knowledge to which he has no right. Or it may be a cynical and deliberate plot to flatter the Senior Officer by [illegible]

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

with omiscience. Senior officers especially those who have only recently been promoted to the inner sanctume of secrecy, find such questions all too often irresistible.

Jealousy -

Third, there is the question asked by Senior of Senior, by Junior of Junior. Such questions are born of the competitive spirit. We are all too easily scared of our co-equals getting a jump ahead of us. We must for ever be "keeping ourselves in the picture", apernicious phrase, designed to excause our love of gossip and to conceal our jealousies. Too often such questions are answered simply in order to score over an adversary on the ladder of fame. To increase our own stature and to debase the questioner's.

METHODS.

The Technique of the Careless Question -

The question may be written, spoken or telephoned, but whatever the vehicle we must recognise a question for what it is. One's answer should depend on:

(a) The possible value of the information to the enemy, and

(b) The value to the asker of the information asked for. It should NEVER depend upon one's assessment of the reliability of the asker.

One usually has a shre wd idea of the value of information entrusted, and can usually imagine why the asker wants it(if not, always ask him). We are all liable to be influenced by familiarity, uniform, insignia, likes and dislikes and may neither be informed nor trained to judge the questioner's reliability.

The written question -

The written question is the least dangerous - there is time to deliberate and in the written answer our own indiscretion stares us in the face. There is danger, however, in the anonymous signal or telegram. It appears authoritative and official and its very urgency is likely to impair our judgement.

The Spoken Question -

Although one can identify the questioner, study his inflection and expression, and cross question him, yet the speed of conversation precludes too deliberate and examination of every question.

The questioner whose questions are not in fact "careless" will identify himself satisfactorily, meet all counter-questions, have inflections and expressions under perfect control, and will probably step-up the tempo of the conversation.

The Telephoned Question -

This is by far the most dangerous. The caller cannot be checked, and we are all so inured to bad lines, faulty connections, personal identifications omitted or mumbled, urgent appeals for information, changing personnel and so on, that we cannot for ever be asking people, often very senior and very terrifying officers, to speak up, ring back or hold on. We rely on internal and automatic lines and secraphones. There is no such thing as an untappable line, and what one man has scrambled, another can unscramble. Every telephone call goes through at least one exchange, and an expert in the "careless", question, in using the telephone, expose his person to no risk whatever.

TYPES.

The Direct Question -

"Are you going to Gibraltar?"

It needs no further analysis, but its very naivete disarms suspicion.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

The Indirect Question -

"This is the Gieves representative speaking. If your Squadron is going to Gibraltar, you might still care to see the new Service topee we are now showing."

Most of us would indicate in our answer whether our Squadron was going. We might say "How do you know we are going to Gib?", or "We're not going to Gib." or I'll mention it to the Adjutant" or "Thanks a lot, I'm not interested, but I'll tell the 447 boys", or "We've been told that we don't need topees at Gib."

Of course it wasn't Gieves.

The Invitation to Confirmation -

"I hear you are going to Gib."

Particularly effective against the very young or first time traveller, or anyone proud of or grousing against overseas posting. It disarms suspicion from the first, since it implies that there is no need for discretion as, in any case, the questioner knows the whole facts, and doesn't even frame his question as a question. Don't rely on question marks.

The Invitation to Contradiction -

"How do you like the idea of Malta?"

The mere fact that the implied knowledge is incorrect or incomplete tempts our passion for putting people right, and too often does not excite our suspicion.

To Sum Up -

These careless question formulae will pierce the Security armour of the most reserved and suspicious of us. You can't stop people guessing or deducing, but you can make it harder by denying them confirmation or contradiction whether by statement or implication. And no careless question is more likely to elicit the trust and elicit it like lightning than a question which challenges a man's loyalty to and pride in his squadron.

In the Mess and in the home do not classify secrets, but keep what is secret ABSOLUTELY SECRET.

The sum of our knowledge of the enemy is immense, but there is one thing we do not know - how much he knows about us. How much he knows depends in large measure upon each of us and upon it depends in large measure life and death, victory or defeat.

3. JAPANESE HAND GRENADES TYPE "91" & "97"

WARNING - INSTANTANEOUS DETONATION CAN BE OBTAINED WITH THESE GRENADES, THEREFORE A THOROUGH EXAMINATION MUST BE MADE BEFORE USING THEM.

A recent examination and test carried out on these grenades disclosed that instantaneous detonation could be obtained by a simple process of unscrewing and removing the delay train and tube, thus allowing direct ignition between percussion cap and detonator.

JAPANESE TYPE "91" GRENADE

GENERAL DATA

Length	:	3.75 in approx
Diameter	:	1.97 in
Weight	:	1 lb approx
Fuse Delay	:	7 - 8 seconds approx

CONSTRUCTION

(a) The body of the grenade is of cast iron, TNT filled and is serrated to ensure maximum fragmentation. A filling plug screws into the upper end of the body and is threaded to receive the brass fuze body which houses the firing mechanism.

(b) The firing mechanism consists of a brass striker body (inertia weight) into which is screwed the steel striker, a creep spring, and a percussion cap. A brass fuze cover fits over the fuze body, the whole being drilled to take a safety pin preventing the striker pin from contacting the percussion cap.

(c) A brass tube containing a black powder delay train is screwed into the base of the fuze body. An enlargement in the internal diameter of the tube at its base houses a pressed perforated pellet of granular gunpowder covered by a perforated disc. A small quantity of granular powder is present between the top of the delay train and the percussion cap holder. A hole drilled in the side of the fuze body contains a fusible plug which melts when the black powder is ignited allowing the escape of gases formed on combustion of the delay train.

(d) A copper tube extends centrally from the base of the bursting charge to the base of the fuze body and houses the delay tube, and at its lower end, the detonator. Beneath the detonator, is a thick felt disc to protect the detonator from shock of discharge, and also to keep it correctly positioned.

EXPLOSIVE FILLINGS

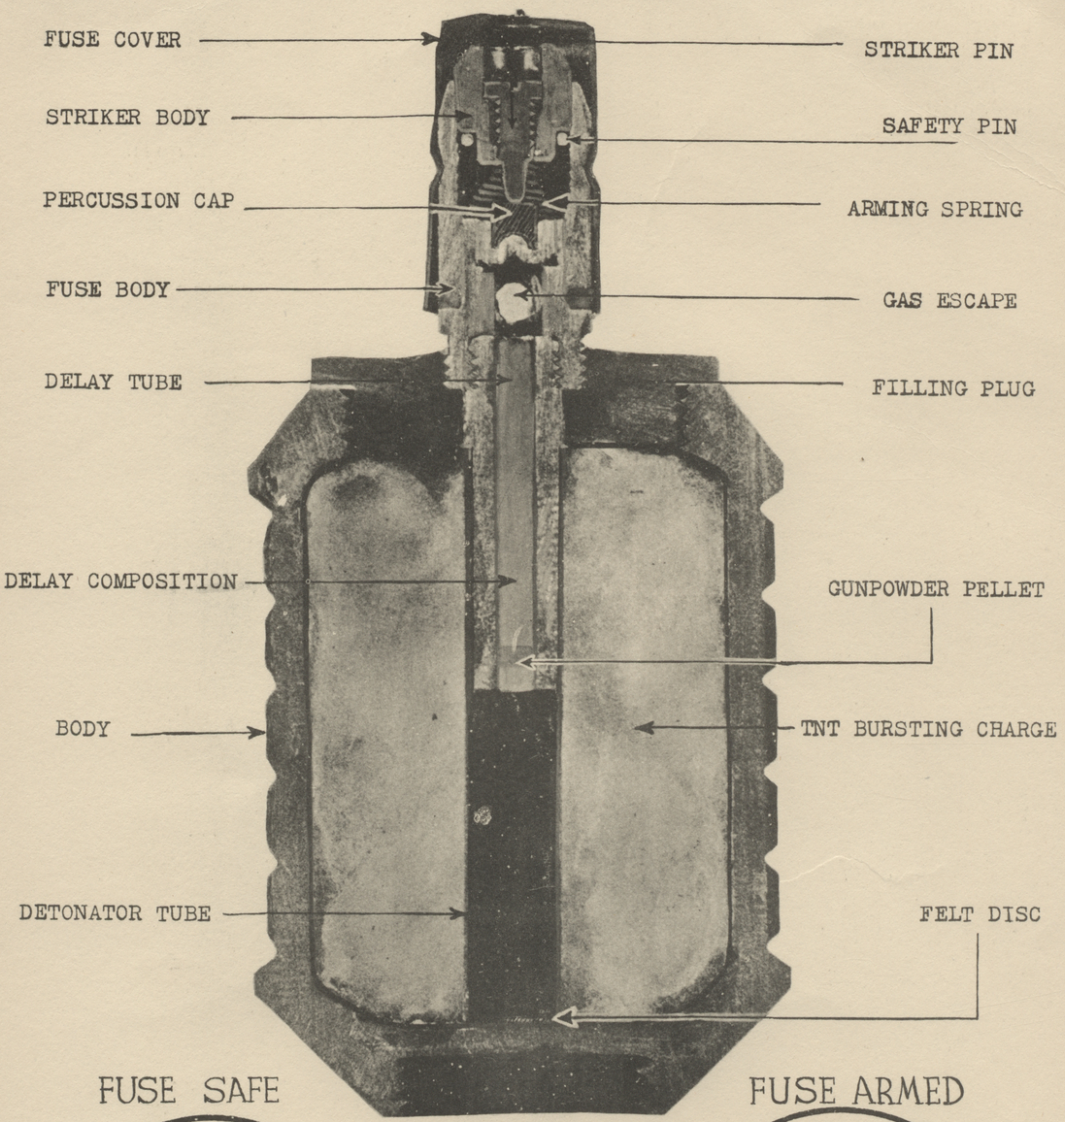

DETONATOR - This consists of a long copper tube into which is pressed 1.06 grams of tetryl. Into a perforated cup lined with tinfoil, is pressed 0.7 gram of mercury fulminate. The cup is inverted and pressed into the copper tube so as to bring the tetryl and mercury fulminate surfaces together. The mouth of the tube is then rolled over the base of the cup.

BURSTING CHARGE - This consists of 65 grams of powdered crystalline, low grade TNT, lightly pressed in around the central copper tube. A cardboard washer covers the upper surface of the charge.

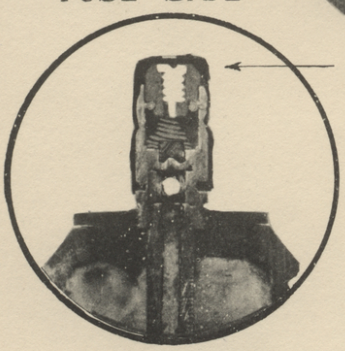

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

SECTION OF

JAPANESE TYPE 91 GRENADE

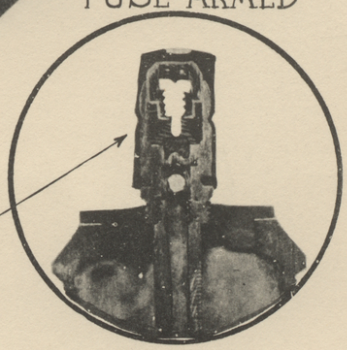

FUSE SAFE

Screw to top

FUSE ARMED

Screw down to full extent

GSI(a) ADV LHQ 9 JUL 43

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

METHOD OF USE

To Arm Grenade : With safety pin in position, screw down striker head to full extent.

To Throw : Make sure grenade is armed. Grasp grenade with fuze pointing downward and withdraw safety pin. Strike head of fuze cover sharply against heel of boot or any hard object; then throw grenade.

WARNING : Owing to the erratic behaviour of fuzes, care must be taken to throw grenades IMMEDIATELY head of grenade has been struck.

ACTION -

When the head of grenade is struck on object (with safety pin removed), the striker is driven on to the percussion cap.

The flash from the cap ignites the loose black powder, which in turn ignites the delay train. After the delay train has burnt through, the perforated black powder pellet is ignited and this initiates the detonator element, which in turn detonates the main bursting charge.

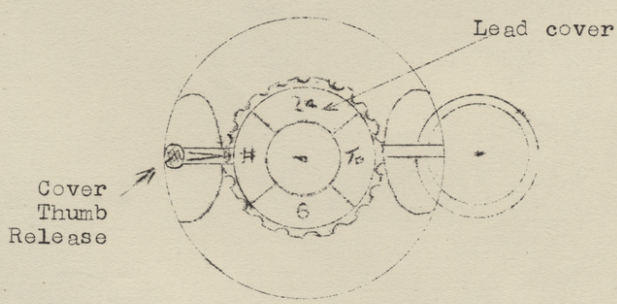

OTHER USES -

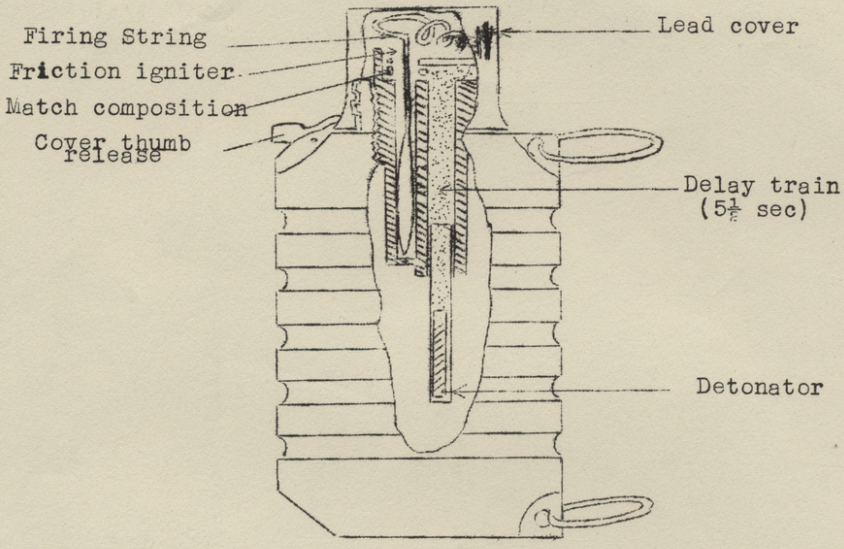

The base of this grenade is screw threaded to take either a ballastite charge for use when firing grenade from the grenade discharger, or a tail fin attachment for firing as a rifle grenade.

4. JAPANESE PULL TYPE HAND GRENADE

The following details were extracted from a report prepared by MEIU USN -

Overall length	:	$3\frac{3}{8}$ in
Length of body	:	$2\frac{3}{4}$ in
Length of cover	:	1 in
Diameter of body	:	2 in
Diameter of cover	:	1 1/8 in
Weight total	:	15.8 oz
Weight of body	:	14.4 oz
Weight of filler	:	1.4 oz
Explosive filler	:	Granular TNT
Body material	:	Cast Iron
Cover material	:	Lead

GENERAL REMARKS

This grenade is easily distinguished by its outward appearance. It has no longitudinal serrations as with the Types 91 and 97 Grenades, but has five (5) transverse depressions. On one side, fitted top and bottom, are two metal rings which could be used either for carrying, or for anchoring grenade for use as a booby trap.

OPERATION

To remove the lead cover, the cover thumb release at the side must be depressed. The cover then screws off in one and one half turns, exposing the firing string. When the firing string is pulled, it draws a friction igniter between two pieces of match composition and ignites them.

The match in turn fires the five and a half second delay train which initiates the detonator, thus setting off the main charge.

5. JAPANESE 6.5mm (.256 in) "TYPE 96" (1936) MODEL (BREN TYPE) LMG

GENERAL FEATURES:

The weapon, although of a similar calibre to the TAISHO II (1922) NAMBU, is a later type of Japanese LMG and it is thought that the NAMBU is now becoming obsolescent and being slowly replaced by the "Type 96". Although known as the "Bren Type" and resembling the British Bren in appearance, it should be clearly understood that the gun is in no sense a Japanese copy of the Bren and the resemblance is merely confined to outward appearance and several minor components only. It is a gas operated, air cooled, magazine fed and shoulder-controlled weapon which has been the most frequently encountered automatic weapon in the SWPA to date.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

CHARACTERISTICS:

Calibre	: 6.5 mm (.256 in)
Weight of gun	: 21 lbs
Weight of barrel	: 5¼ lbs
Type of magazine	: flat and curved
Magazine capacity	: 30 rds
Weight of full magazine	: 2¾ lbs
length of gun overall	: 42 ins
Length of barrel	: 19$\frac{1}{29}$ ins
Muzzle velocity	: 2410 fps
Maximum rate of fire	: 530 rpm (approx)
Practical rate of fire	: 120 rpm
Types of fire	: automatic only
Sights	: Barley-corn or blade foresight. Drom controlled, aperture rear sight, graduated from 200-1600 metres in hundreds.

STRIPPING and ASSEMBLING:

Similarly to the build up of British weapons, the "Type 96" is divided into four groups, which make stripping and assembling a simple procedure. These groups are known as the Piston Group, Barrel Group, Butt Group and Body Group.

MECHANISM:

The mechanism of this gun is very similar in principle to any other gas operated LMG and further explanation of it, or the stripping and assembling is considered unnecessary.

One important feature of the gun which differs to the Bren, is the cocking handle, which is located on the left side and has no alternative position provided for operation on the right side. This feature is also common to the NAMBU LMG and a "Type 99". The fundamental action of the weapon, however, is similar to the Bren and requires no further explanation.

MAGAZINES:

These are of the flat, corved- shape type, similar to the Bren and holding 30 rounds. The mechanism and heading of magazines is similar to the Bren except that the breech block is not held up by the magazine platform after the last round is fired. The magazine is placed on the gun "Bren fashion" and a filler of the Bren type but lighter in construction, is provided. An unimportant but unique feature in the magazine design is displayed by a small aperture or window at the rear and base of the magazine, in which figures 0 - 4 appear and indicate to the gunner when the ammunition is expended or when only 1- 4 rounds remain.

LOADING, UNLOADING, FIRING AND STOPPAGES:

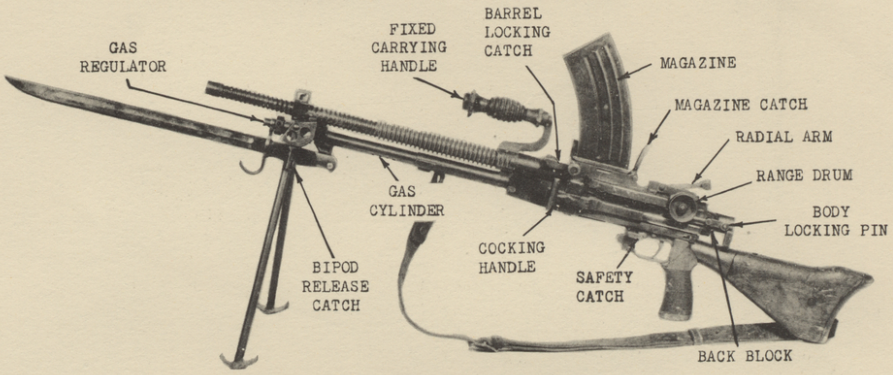

As the mechanical and feeding operation of this gun is similar to the Bren, the loading, unloading, firing and action to remedy stoppages is the same and need not be dealt with.

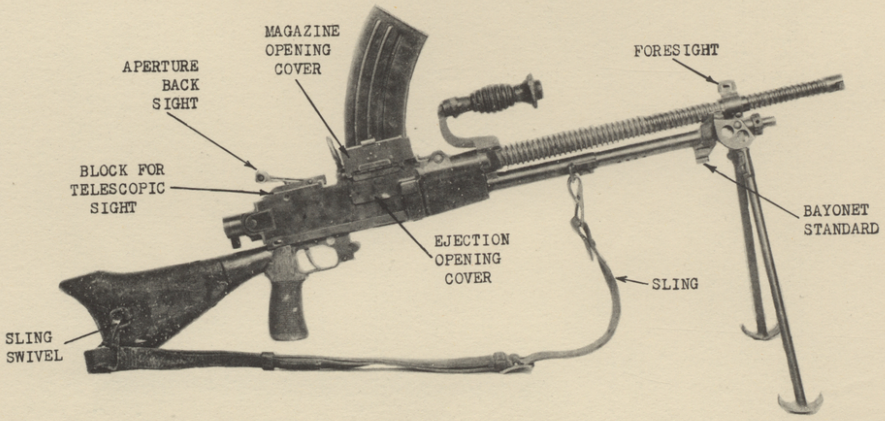

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

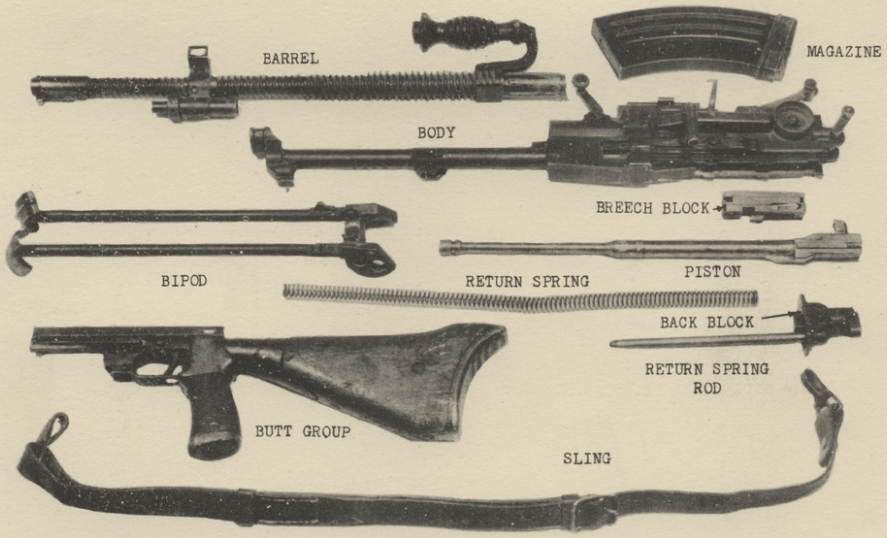

JAPANESE "TYPE 96" (BREN TYPE) LMG (1936)

WITH STANDARD INFANTRY BAYONET ATTACHMENT

CALIBRE 6-5 MM (·256")

GS.I(a) ADV LHQ 13 AUG 43

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

MISCELLANEOUS:

A bayonet standard is fitted on the underside of the gas cylinder and a boss is formed by the projection of the gas cylinder from the gas block. The standard Japanese rifle bayonet fits the gun.

A cover of padded leather is clipped round the barrel and gas cylinder giving protection to the firer's hands and allowing the weapon to be easily handled and fired from the hip like an SMG.

No A/A fittings are provided on this gun, but an optical sight, which is a fixed focus telescope, gives credence to the belief that this weapon is used against aircraft.

Photographs have just been received which show a weapon of 7.7 mm "Type 99" and identical to the "Type 96" except in one minor detail, which suggests that the 6.5 mm calibre is being replaced by a larger and heavier calibre, possibly with an idea of utilising our ammunition. This new weapon will be fully reported on when further information and photographs showing more detail come to hand.

6. NEW TYPE 20mm CANNON IN BOMBER AIRCRAFT

An examination of a Japanese bomber which crashed at DARWIN on 20 Jun 43 disclosed a 20 mm cannon in an electrically operated gun position or turret.

The cannon is similar to a tank-attack gun and should have much greater range than any present known Japanese aircraft cannon. A few details from a preliminary examination are listed:-

Cannon is gas operated using twin cylinders	
Bore	: 20 mm
Overall length	: 68 inches
Weight (approx without mount)	: 68 lbs
Barrel: Length	: 47¼ inches
Flash Eliminator Length	: 2 1/8 inches
Breech to gas Outlet Port	: 15 5/8 inches
Breech inside Diamter	: 1.120 inches
Lands	: 8
Grooves	: 8
Direction of Rotation	: Right
Cartridge Case	: Brass, Conventional design length 4 13/16 inches
Length behind Projectile	: approx 4 inches

(AAF Summary No 117)

7. JAPANESE 90 mm "LIGHT" MORTAR TYPE 94

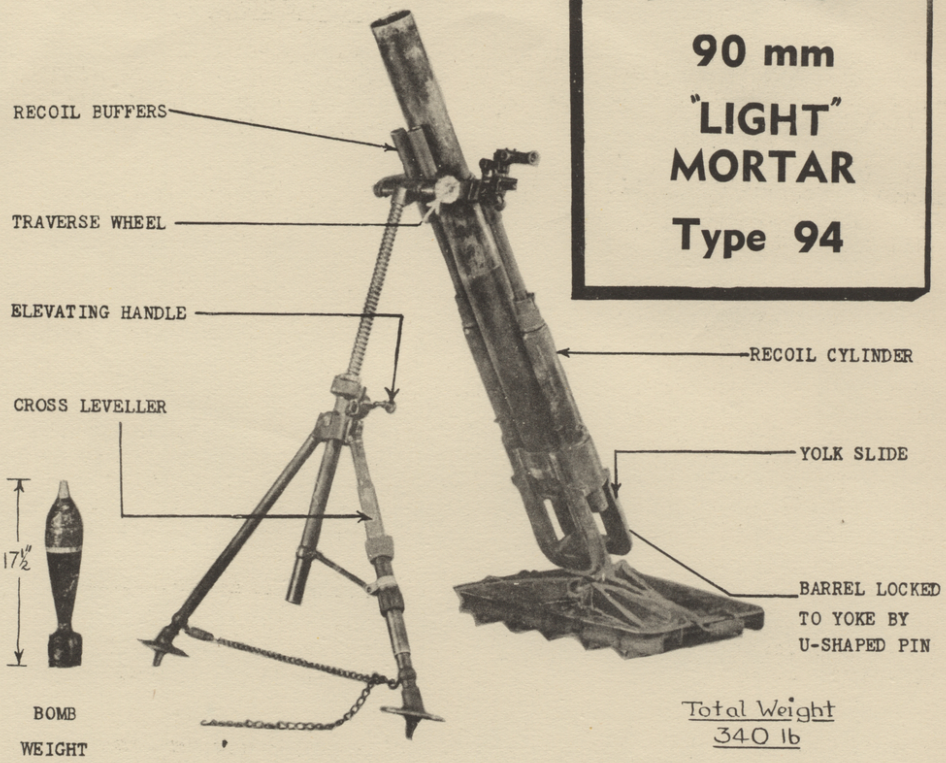

The following characteristics of this weapon were obtained from a local examination carried out be 3 Ordnance Intelligence Section USAFFE -

Traverse	: 10 deg
Weight of bomb	: 11.5 lb
Dimensions of base plate	: 28.5 in x 18.5 in
Range	: 610 yds to 4150 yds (approx)

DETAIL

An outstanding feature of this weapon is its noticeable recoil mechanism.

The barrel, which fits into the recoil mechanism and is secured by a U-shaped locking pin, is supported solely by the ball fitting at base of recoil mechanism, seating in base plate.

Attached to the top of the bipod are two plungers incorporated indirectly with the buffer system. At the top end of recoil mechanism are projections that position themselves within plungers mounted on bipod. A screw cover attached at lower end of plungers, covers, and secures this junction.

The bomb is fired on the same principle as our own 3 in Mortar.

The recuperation system, reinforcement of base plate and weight of bomb fired, would tend to make this weapon quite effective.

Translation of the characters on the barrel of this weapon are -

94 TYPE LIGHT MORTAR
No 82
MANUFACTURED 1936
OSAKA ARSENAL WORKSHOP

8. JAPANESE 81 mm SMALL MORTAR TYPE "99"

CHARACTERISTICS

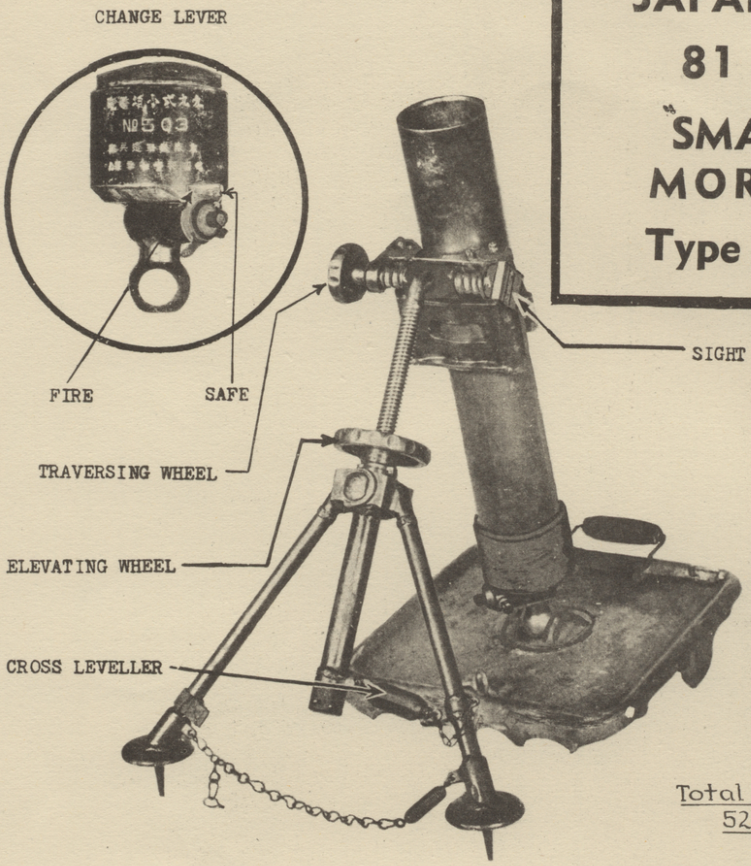

Diameter of bore	:	3.213 in
Inside length of barrel	:	21.5 in
Overall length of barrel	:	25.25 in
Dimensions of base plate	:	14.25 in (square)
Weight of barrel	:	17.5 lb
Weight of bipod	:	16.5 lb
Weight of base plate	:	18 lb
Weight of bomb	:	6.93 lb
Total weight of mortar	:	52 lb
Traverse	:	16 deg
Range	:	550 yds to 3280 yds (approx)

This weapon is similar in design to the U S 81 mm Mortar with the exception of the firing mechanism.

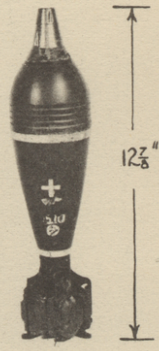

FIRING MECHANISM consists of a Firing Pin, Change Lever and a Firing Pin Cam Shaft. The mechanism is at bottom right of barrel.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Total Weight
52 lb

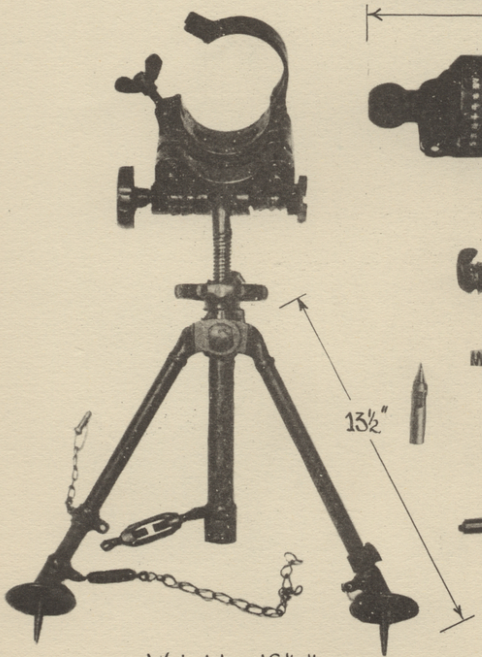

BOMB
WEIGHT
6 lb 15 oz

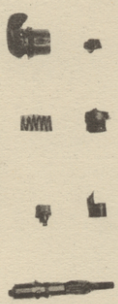

COMPONENT PARTS

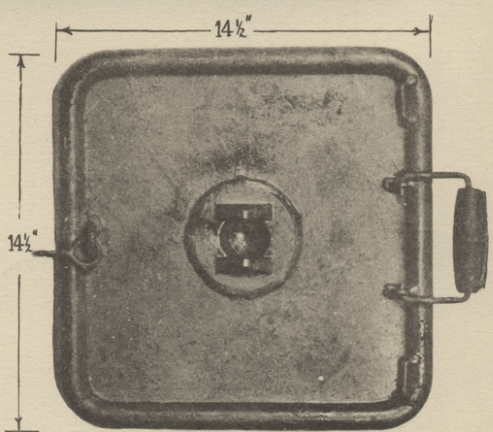

Weight 17½ lb

Weight 16½ lb

Weight 18 lb

GSI (a) ADV LHQ

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

SAFE

(i) When the Change Lever is on FIRE and is turned to SAFE with the Firing Pin Cam Shaft held out, the Firing Pin is locked "up" , the Firing Pin Cam is locked out and the mortar will NOT fire.

(ii) When the Change Lever is on FIRE and is turned to SAFE with the Firing Pin Cam Shaft pressed in, the Firing Pin is locked "down", the Firing Pin Cam is locked in and the mortar will fire the round, when loaded, automatically.

FIRE

When the Change Lever is on SAFE and turned to FIRE with the Firing Pin Cam Shaft held out, the Firing Pin is "down" and Firing Pin Cam has free movement. If the Firing Pin Cam Shaft is struck sharply with a block or mallet, the Firing Pin would be forced up firing the round if one is in position.

NOTE

The Change Lever can NOT be turned from SAFE to FIRE with the Firing Pin Cam Shaft pressed in.

Translation of the characters on the barrel of this weapon are -

99 TYPE SMALL MORTAR
No 503
OSAKA ARMY ARSENAL
MANUFACTURED 1942

No sights were available for examination, but provision is made on right side of mortar for attachment of sights.

A point to note is a buffer system incorporated in the bipod, giving recuperation of approximately 2 in, the cylinder being filled with a light grease or heavy oil. The buffer system would be effective as weapon fires a large bomb in comparison with the length of the barrel.

9. JAPANESE 20 mm AUTOMATIC TK/A GUN TYPE "97" (1937)

The following details and characteristics were extracted from a report prepared by Ordnance Intelligence Unit USAFISPA.

GENERAL PARTICULARS

This weapon is a single purpose Tk/A gun, operating on the Oerlikon principle. It is air cooled, gas operated and magazine fed, and incorporates a spring type recuperation system.

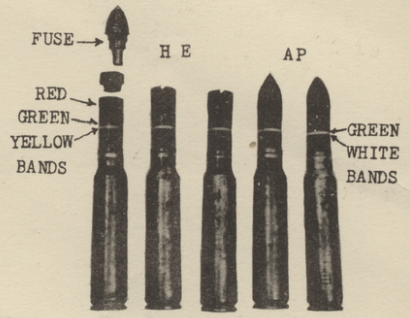

Provision is made at the front and rear of the gun, for the attachment of handle bar type carrying handles to facilitate handling.

Tests carried out disclosed that the A/P ammunition, fired from this weapon, is capable of penetrating half inch Face Hardened Armour Plate at a range of 200 yards.

Width	: 12 in
Thickness	: 5/16 in

Neither the capacity of the magazine or the firing rate of the weapon were included in the report received.

10. JAPANESE TK/A WEAPONS

The following information is extracted from a Japanese document captured in the SOUTH PACIFIC Area. Unfortunately the document is undated and the Division referred to, is unknown. The weapon to which the report refers, is not known either, but it is apparent that a new Type Tk/A grenade thrower exists.

"12 of the latest anti-tank weapons - anti- tank shells and anti-tank grenade-throwers - will be issued to each Inf Regt.

This weapon is very secret and although it is now under experimentation by the Army Technical HQ., since it is being distributed immediately to this Div for the coming operations, care will be taken to maintain secrecy and it is desired that its success and opinions on it will be reported following the subsiding of one phase/ of activity/ in the operations. Also not only is there extremely little ammunition but high temperatures and dampness can greatly reduce its efficiency, so it is desired that great care be taken for its protection".

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

11. JAP LANDING CRAFT

Table compiled by GS (Int) Second Aust Army from information received to Aug 43

Type	Class	Description	Length	Beam	Speed	Capacity
Large type MLC	"A" Class MLC	Old type - 6 tons weight	40' - 50'	10'	6 - 7 knots	60 me
		New type - (1-2 25 cal MG, Landing flaps forward.	49'	11'5"	8-10 knots	100-120 men
		(Navy type - Two MGs, landing flaps forward.	49'	11'5"	10 knots	60 men approx
"	"B" Class MLC	6 ton weight armoured bow to stern 25 mm	40' - 45'	10'	6 - 7 knots	70 men
"	"C" Class MLC	Old type - 8 tons weight, no armour, twin keel	45' - 50'	12'	7 - 8 knots	80 men
		New type - 2 MGs forward, 1 aft	49'	13'	25 knots	50 men approx
"	"D" Class MLC	Old type - 10 tons weight - twin keel	50' - 55'	14'	7 - 8 knots	100 men
"	"G" Class MLC	New type - curved prow. No armour.	52'	13'	8 knots	50 men approx
Small type MLC	"B" Class MLC	Old type - 2-3 tons weight, fitted to carry MG forward.	30' - 40'	8'-10'	8-10 knots	50 - 60 men
		New type - MG in bow. Bullet proof shield in bow capable of stopping .50 calibre bullets.	30'	7' 6"	8-10 knots	40 men approx
"	"C" Class MLC	2-3 ton weight fitted to carry MG forward	30' - 40'	8'-10'	8 - 10 knots	50 - 60 men
"	"D" Class MLC	Old type - 2-3 ton weight fitted to carry MG forward.	30' - 40'	8'-10'	8 - 10 knots	50 - 60 men
		New type - No armament. No armour. Some have engines, some NOT powered.	38'6"	11'		60 men approx
"	"R" Class MLC	2-3 ton weight, fitted to carry MG forward	30' - 40'	8'-10'	8 - 10 knots	50 - 60 men
"	"T" Class MLC	2-3 ton weight fitted to carry MG forward.	30' - 40'	8'-10'	8 - 10 knots	50 - 60 men
Small River craft	Type "F"	New type - Collapsible boat of composition board with rubber joints. Outboard motor	15'	4'	NOT known	20 men
		New type - Steel plate construction. No armament.	21'	7'	8 - 10 knots	20 men approx
Hydroplane type	Type "E"	Old type - Aeroplane propeller, for lake and creeks.	35'	-	Approx 12 knots	20 - 25 men
		New type - 1 or 2 MG in bow. Aeroplane propeller.	63	8'7"	10 knots	60 men approx

NOTES:

Large type MLC (old type)
(1) Are constructed of metal plates
(2) Can transport light arty (usually mountain guns). Light tanks and horses.
(3) Landing flaps:
A class have flap doors forward
B, C & D Class have double flaps forward lowered by wires.

Small type MLC (old type): Some are fitted with bullet proof armour.

Jap MLC are manned by Military Engineer personnel.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

12. JAPANESE OPTICAL INSTRUMENTS

The following details and characteristics were obtained from 3 Ordnance Intelligence Section USAFFE -

10 cm ANTI-AIRCRAFT BINOCULARS MODEL 1929

DESCRIPTION:

The Japanese 10 cm anti-aircraft binoculars, Model 1929 are fifteen power spotting binoculars equipped for a cradle and tripod mounting.

The field lenses are ten centimetres in diameter and have a four degree field of view.

The instrument is equipped with open sights, diopter adjustments, interpupillary adjustments and an elevation adjustment and scale graduated in degrees.

The right optical train of the binoculars contains a calibrated reticle which may be artificially illuminated.

The instrument is designed for locating, spotting and tracking aircraft and spotting anti-aircraft bursts.

CONSTRUCTION:

These binoculars are essentially two seperate telescopes, with inidvidual adjustments, mounted in a substantial aluminium case, which is provided with lugs to support the unit on its mount. The case is fitted with four spearate body supports ensuring rigidity. A V and an inverted V type of open sights are mounted on the right telescope to facilitate quick adjustment of the instrument on moving objects.

An elevation arc graduated from minus ten degrees to plus ninety degrees is fitted to the right side of the telescope.

The eye - pieces are provided with soft pliable rubber shields which fit snugly into a recess in the frame around the eye lenses.

Focal adjustments are made at the eye - piece only, where diopter adjustment maybe made from plus two to minus four on the diopter adjustment scales.

Interpupillary adjustments maybe made for the eye - piece lenses by rotating the segments just below the adjustment ring.

The interpupillary scale is graduated from sixty to seventy-two millimetres.

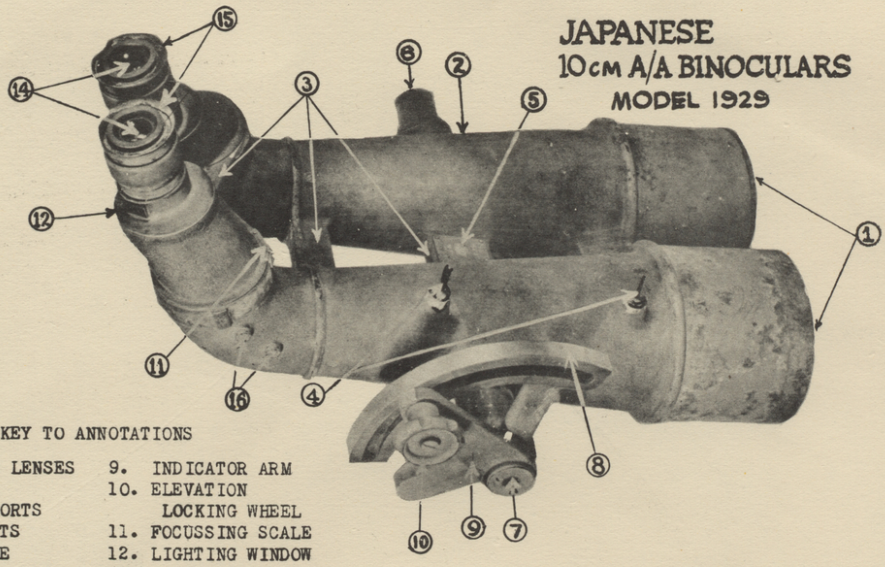

The right telescope contains a reticle calibrated from zero to thirty mils and reads from centre to outside in both vertical and horizontal planes.

The reticle is graduated in five mil increments and is numbered at each ten mil interval. A photograph of this instrument appears as Photographic Appendix "B(i)".

TURRET HEAD

GSI(a) ADV LHQ 30 JUL 43

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

JAPANESE THREE POWER TELESCOPE (TRIPOD MOUNTED)

DESCRIPTION:

The Japanese three power telescope consists of a turret head telescope, an all-round traverse scale and mounting a tripod and carrying case. The turret head permits the selection of three powers. The thirty- three power eye-piece is used for long range observation on clear days, the twenty - four power eye - piece is used for normal clear days and a third eye - piece, missing from the instrument examined, is thought to be of lower power for use on dark and cloudy days. It is believed that the telescope is used for spotting artillery bursts. The telescope may be oriented and moved in both traverse and elevation. Both movements are measured on scales provided on the mounting.

INSTRUMENT PROPER:

The telescope is of the prismatic type with an objective lens eighty -- three millimetres in diameter.

THIRTY-THREE POWER EYE-PIECE:

This eye-piece and train contains no reticle. The eye-piece housing is equipped with a diopter scale adjustment graduated from minus ten to plus ten in single units.

TWENTY-FOUR POWER EYE-PIECE.

This eye-piece contains a reticle marked horizontally and vertically. Near the centre, the cross lines become very fine for a length of approximately one-sixteenth of an inch. They then discontinue at the centre leaving a small area free of cross lines. The reticle does not have numerical graduations. This eye-piece also has a diopter scale and adjustment graduated from plus seven and one half to minus seven and one half in single units.

REMARKS:

This instrument is without a means of fine vertical adjustment, although such adjustment seems very essential since spirit level tubes and attachment for a plumb bob are already provided on the instrument.

NIL.

ADMINISTRATION.

365. POWERS OF SENTRIES AND GUARDS.

1. Regulation 8A of the National Security)General) Regulations (Statutory Rules 1942, No 374) provides that, without derogating from or restricting the existing powers or rights of sentries and guards, a military sentry or guard stationedor posted at, on, in, or in the neighbourhood or vicinity ofany prohibited place, protected area, controlled area or any premises used by the Commonwealth, or used for defence purposes or for essential services, or any behicle, vessel or aircraft used by the Common wealth, or any enclosed wharf or picking-up place, or any merch vessel lying in port, or any road, pathway or waterway, specifi in an order by the Minister, which passes through or near a prohibited place or work of defence, may be armed, and may -

(i) use his weapons against, or otherwise attack, any person who, in disregard of a warning given by a sentry or guar approaches, enters, leaves, or passes over or inthe vicinity or neighbourhood of, or attempts to approach, enter, leave or passover or in the vicinity or neighbourhood of, that place, area, premises, vehicle, vessel, aircraft, wharf, picking up place, road, pathway, or wat wey, or who, after being arrested for so doing, escapes, and

(ii) use his weapons against, or otherwise attack, any person attacking him or who is reasonably suspected of being about to attack him.

2. There are, however, certain principles which must guide all sentries and guards in the execution of their duty as such, and in the exercise of the right to resort to arms.

3. These principles are :-

(a) Sentries and guards will be ordered to take any action required to ensure the safety of their posts or to defeat the activities of enemy, or suspected enemy, agents.

(b) If necessary, they will fire upon or otherwise attack any persons threatening the safety of their posts or engaging in hostile actions.

(c) Before firing upon any person, the sentry or guard will, except in an urgent case of self-defence, challenge the person to " Halt". If that person does not halt, the sentry should challenge him again with "Halt or I fire " If he does not halt, and no other means are available f stopping him - as for example, by calling in the rest of the guard - it is the duty of the sentry to shoot.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

(d) The sentry will use his intelligence and sense of responsibility in choosing whether he will shoot or not, and he must be careful not to allow any suspected person to approach so close that he can be rushed and overpowered.

(e) Guards of enemy prisoners of war. An enemy prisoner of war attempting to escape may be fired upon, but a previous summons to surrender will be given if possible.

(f) Guards of members of the forces in custody.

(i) An escort or guard is not justified in using his weapons merely for the purpose of preventing another member from escaping from custody and if he so uses his weapons he may render himself, as well as any officer or NCO under whose orders he acted, liable to be charged with murder, manslaughter or incitement to murder.

(ii) If a member in custody attempts to escape, the escort or sentry will immediately raise the alarm and give chase. He may call upon any passer-by to assist him in apprehending the escapee.

(iii) An escort or guard may be justified in using his weapons when a member in custody resorts to violence. In such circumstances an escort or guard may meet force with force, but care must be taken to use no more force than is necessary to overcome the violence offered. Hence, even when violence is offered to an escort or guard, it will only be as a last resort that the use of weapons will be justified.

4. Orders for guards and sentries will be framed in conformity with the above and guards and sentries will be suitably instructed as to their powers and duties.

5. GRO A682/1942 is cancelled.

(To be published in unit routine orders.)

366. INCREASE OF PAY - LANCE CORPORAL.

As from 1 Jul 43, active rate of pay for lance corporals who are not in receipt of specialist pay will be 7/- perday. Deferred pay will remain unaltered.
Action suspended until further advice from these HQ.

367. PROFICIENCY PAY.

1. Proficiency pay of 6d per day will be paid to all privates and lance corporals not in receipt of specialist pay as from 1 Jul 43 subject to -

(a) completion of at least 6 months' service,
(b) good conduct for at least 6 months prior to 1 Jul 43,
(c) passing prescribed examination on the first occasion subsequent to 1 Jul 43.

2. Proficiency pay for lance corporals will be in addition to the 6d per day increase notified above.

3. A breach of good conduct consists of an award of more than 7 days CB or a fine exceeding £1-. The contraction of venereal disease will not be considered a breach of good conduct. A civil conviction involving a fine of £5 or more or imprisonment is a breach of good conduct.

4. A soldier who commits a breach of good conduct shall automatically forfeit his proficiency pay on and from the date of his conviction or the award against him. On completion of a further period of 6 months with good conduct, he will again be entitled to proficiency pay; any period spent in detention, civil gaol, or undergoing field punishment will not be taken into account when calculating the

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Proficiency Pay (Contd)

6 monthly period.

5. Proficiency pay may be withdrawn by the CO at any time if he considers there has been a falling off in the efficiency of the soldier, who must again qualify by examination before pay can be restored.

6. Promotion to NCO rank automatically cancels proficiency pay. Reversion from NCO rank will restore proficiency pay provided the soldier had previously qualified. An NCO who had not previously complied with the necessary conditions must upon reversion qualify as set out above.

7. A soldier transferred from one arm or branch of the service to a unit in a different arm or branch will be entitled to proficiency pay for a period of 3 months after the transfer, within which time he must pass the prescribed examination for the arm or branch to which he has been transferred.

8. Details of the prescribed examination will be published later.

Sep. 43. 18 SEP 1943

INTELLIGENCE REPORT FOR WEEK ENDING 18 SEP. 43.

Based on information received up to 1200 hrs. 17 Sep. 43.

HQ 9 Aust. Inf. Bde.(AIF),
Australia.

1. (a) Ops. - Own Tps.

Nil.

(b) Location - Own Tps.

Bn.HQ. situated at DAPTO Camp (KIAMA 78 2373).

(c) Training.

On 13 Sep 43 the Demonstration Coy. commenced its training with section exercises and on 14 and 15 Sep 43 Pl and Coy exercises. On 17 Sep 43 the Coy. moved to HOLDSWORTHY area where it is rehearsing for the demonstration on 22 Sep 43.

The Demonstration Coy. includes a proportion of M.T. Carrier and Specialist pers. and consequently since its inception permanent duties training squads have not functioned.

The unit M/C school concluded its syllabus on 17 Sep 43; a new course will commence on 20 Sep 43.

(d) Infm. re Int. Sec.:

(i) Composition : 1 Offr., 1 Sjt.
(ii) Trg. & Work : I.O. preparing map reading exercises for senior N.C.O's.- Routine duties. I.Sjt. attending LHQ School of M.I.

16. Topography - Affecting Own Tps.: Nothing to report.

17. Topography - Affecting Enemy Tps: Nothing to report.

19. Security. (a) Information : Conjectures as to what is in store for the Unit have been circulating during the week. There appears to be no definite infm. in any of these and they seem to be purely imagination.
(b) Personnel : Nothing to report.
(c) Material : Precautions seem adequate.
(d) Operations: Nothing to report.
(e) Censorship: No serious breaches have been reported
(f) Suspected Personnel : Nothing to report.
(g) Morale : (i) External : Nothing to report.
(ii) Internal : Generally good. Tps. engaged in Demonstration Coy. have displayed keeness in their trg. thus demonstrating their satisfaction at having some real job to do.
(iii) Educational : No opportunity has existed for security education other than the discussion of security paras. in Int. Summaries.

9 AUST INF BDE INTELLIGENCE SUMMARY NO 26

(Based on infm received up to 2359 hrs 21 SEP 1942).

1. This summary is issued for distribution down to coys or equivalent of 9 Aust Inf Bde.

2. (a) Infm marked "SECRET" will be regarded by offrs as such, and WILL NOT be communicated to any non-commissioned rank, other than key personnel such as Int Personnel.

(b) Infm marked "SECURITY" will be passed on to all ranks at the same time warning them each time that infm is "CONFIDENTIAL" and will NOT be talked about to other than Army personnel.

(c) "GENERAL" infm will be passed on freely to all ranks.

3. Comd 9 Aust Inf Bde directs that coy comd (or equivalent) will ensure that infm under heading "SECURITY" and "GENERAL" is conveyed to all ranks and that a short controlled discussion is held concerning same.

4. Map of SWPA, issued to coys(or equivalent) is to be used in conjunction herewith. The latitude and longitude of place names which are not well known are given in the summary, to enable easy identification.

5. Queries will be referred to unit int secs who will supply answers as promptly as possible.

Miniature and open range practices, MT and Carr maintenance, morse practice and discussions on 9 Bde Int Summaries.

2. OPERATIONS (based on infm received at HQ Second Aust Army up to 1800 hrs 13 Sep 43).

AUSTRALIA.

Enemy attempts to recce the DARWIN area have been unsuccessful over the last month owing to interception and destruction of his recce A/C by Allied fighters. His determination to assess our dispositions was evidenced later by the presence of one recce A/C escorted by 20 fighters over the DARWIN area on 7 Sep when heavy toll was taken of the escorting fighters, 5 being destroyed and 10 damaged.

SOLOMONS.

Cargo vessels and small craft continue to form the bulk of enemy shipping in the SOLOMONS. The largest sighting in the BUIN-FAISI area was on 9 Sep when 11 vessels and 22 barges were reported. A convoy of a destroyer, 2 freighter transports (2000/4500 tons) and 4 MLC was seen heading East for BUKA on 11 Sep.

Except for strong enemy fighter interception in the Northern SOLOMONS there has been no enemy air activity in the area.

Allied attacks were directed mainly at installations at KOLOMBANGARA and KAHILI airstrip. In attacks on VILA and adjacent barge hideouts and gun posns resulting in three guns and one barge being destroyed, five barges damaged, many fires started and supply dumps hit. A number of enemy were reported killed in one raid on VILA. During an attack on KAHILI one of 10 and two of 23 intercepting enemy fighters were destroyed. Other attacks were made against enemy posns on North West coast of CHOISEUL IS and a suspected RADAR site on MORGUSALA IS (South coast SHORTLAND IS). In the latter raid 5 of 25 intercepting fighters were destroyed.

Attacks on shipping in the area resulted in one small cargo vessel probably sunk, one stack aft vessel severely damaged and one direct hit on a cargo vessel.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

NEW GUINEA.

Salamaua.

Heavy harassing and counter-bty arty fire by Allied tps in the SALAMAUA Area preceded a general adv on 10 Sep. Allied forces South of the FRANCISCO RIVER adv North driving the enemy out of their posns on the ridge at LOKANU, the vic of SCOUT RIDGE, CHARLEY'S HILL and the area ½ mile SE of the KOMIATUM-SALAMAUA track junc. KENNEDY'S CROSSING was taken and on 11 Sep the Allies occupied the SALAMAUA airfield and the SALAMAUA isthmus. Enemy forces however, are still holding out in posns North of the FRANCISCO RIVER on high ground running NE towards KELA POINT and on general line running from 1½ to 2½ miles West of the isthmus.

Allied forces North of the FRANCISCO RIVER commenced their adv to the East on 10 Sep engaging enemy posns at points 1¾ miles West of LOGUI No 1 and 1 mile NE of OLD BOBDUBI, the former posn being occupied but in the vic of the latter posn the enemy staged an unsuccessful attack. Despite the heavy rain the Allied adv continued and by 1930K on the evening 10 Sep fwd tps had reached the line of the FRANCISCO RIVER.

(HQ Second Aust Army Int Rev No 73).

On 17 Sep elements of our fwd tps reached LABU 1 and MARKHAM POINT.

(HQ 1 Aust Div Daily News Bulletin No 17).

Lae.

After consolidating their bridge-heads in the vic of the BUSO RIVER mouth, Allied tps commenced drives to the West towards LAE and to the East towards HOPOI. The adv towards LAE was effected by two forces, one moving along the coast, and the other moving about 2 miles inland and parallel to the coast. The interception of 100 Jap tps in the vic of SINGAUA Plantation did not impede the adv which by 1600 hrs on 8 Sep had reached posns 3 miles North and 3¾ miles NNE of MALAHANG airfield. The following day the coastal column of our tps crossed the BUSU RIVER. Heavy rain on 10 Sep prevented further tps from making the crossing but our forces maintained their bridge-head in the face of enemy counter-attack on the left flank.

Further Allied tps were landed at the mouth of the BUSU on the night of 10/11 Sep. Organised enemy resistance was encountered by the tps West of the BUSO but relief was given to these tps by our inland column moving West.

(HQ Second Aust Army Int Rev No 73).

On 17 Sep fwd units of Eastern force reached LAE. Fwd elements of Allied tps which completed landing at NADZAB on 17 Sep reached the track 3 mls ENE of YALU without contacting enemy. Allied patrols are now operating in the BOANA area.

(HQ 1 Aust Div Daily News Bulletin No 17).

Ramu Valley.

It is reported that there were no enemy tps at DUMPU and KAIGULIN on 3 Sep.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

NW AREA.

Enemy air activity in NW Sector was directed against MERAUKE, TANAHMERAH and MAPPI in DUTCH NEW GUINEA.

MANOKWARI and BABO were the targets for Allied bombers in DUTCH NEW GUINEA.

(HQ Second Aust Army Int Rev No 73).

4. ENEMY TACTICS METHODS AND HABITS.

EXTRACTS FROM A JAPANESE OPERATIONAL BULIETIN. SECURITY.

Instructions as to flanking and enveloping movements: A BUTAI advanc alone along a roadway, upon encountering the enemy, should avoid a direct meeting and attempt instead to disrupt the enemy by boldly carrying out flanking and enveloping movements.

BUTAI with jungle experience emphasize that there is no jungle through which a passage cannot be cut.

It is essential for each TAI to carry as many cutting tools as possibl Machetes of the type commonly used by natives are very effective for this work.

Method of giving orders in jungle areas: Experiences of certain veteran BUTAI indicate that raising the voice during hostilities in the jungle attracts enemy fire. The best method of issuing orders is to use a small whistle giving a birdlike sound.

(HQ Second Aust Army Int Rev No 73).

6. ENEMY ARMAMENT & EQUIPMENT.

JAP REVOLVER. SECURITY.

Att as Appendix "B" is a photoprint giving details of the JAP 9 mm (.335") revolver.

(1 Aust Div Int Summary No 90).

JAP BOOBY TRAPS. SECURITY.

Att as Appendix "C" are details of various types of JAP booby traps. (See also 9 Aust Inf Bde Int Summary No 25.)

JAP LAND MINE - TYPE 93. SECURITY.

This mine weighs 3 lbs and contains about 2 lbs of Picric Acid. It is circular, 6¾ inches diameter, with slightly domed top and flat bottom, its height being about 1¾ inches.

Two brass strips, each with two brass "D's" are soldered on diametrical opposite sides of the mine. Drag ropes are attached to the "D's" enabling the mine to be used as a "walking mine". When it is attache to a light rope, it can be hurled by an operator a distance of 15 feet into the path of an approaching tank. Several mines are sometimes strung on a rope 150 ft long and drawn across the path of approaching tanks or vehs by 2 operators. The mine is painted a dull brown colour with a ⅜ inch wide red band round the central plug.

A brass cylinder with attached washer fits over the brass safety cap and rests on top of the steel plug, the washer fitting under the leathe washer of the brass plug. This is an additional safety device and has a lug indicator with the Japanese ideograph for "safe" on it

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

How the Mine Functions.

With the safety devices removed, any load on the cover of the mine causes the knurled brass plug to press down on the striker. If the pressure is sufficient (estimated about 250 lbs) the shear pin is sheared. This frees the striker which, under pressure of the spring, strikes the detonator cap which initiates the detonating system.

To Neutralise the Mine.

(a) Examine the area around the mine for traps.
(b) Without moving the mine or exerting any pressure on the cover unscrew the knurled brass plug.
(c) If a brass safety cap is available screw it firmly into the top of the striker, similarly if a brass cylinder with attached washer is available, place it over the brass safety cam and screw on the knurled brass plug.

To Disarm the Mine.

(a) Unscrew the knurled brass plug.
(b) Unscrew the whole fuze assembly from the brass of the mine.

General.

The date on the cover of the mine examined was 16.9 (September 1941). A Japanese inscription printed on the paper wrapping of the explosive block gives the type and number of the mine and the date April 1939.

(M.G.O. Equipment Memorandum No 5).

See also Supp to Second Aust Army Review No 63. Drawing is att as Appendix "D".

7. JAP AIRCRAFT. SECRET.

The fifth of a series of appendices containing infm on enemy A/C is att. The plane is the JAP TYPE I M/B "BETTY".

PROBABLE T O RF/P GLEN.

The following infm is extracted from an Air Combat Int Report, SOPAC Force of the U.S. Pacific Fleet:

"On 17 Aug the 1-17, one of the largest class of Japanese subs was sunk off NOUMEA. Six POWs were recovered, and from them considerable definite infm has been secured concerning the type of A/C carried by the sub.

The A/C was described as a twin float monoplane with a radial engine very similar in appearance to T O RF/P JAKE, although considerably smaller. It was a two place instead of a three place A/C. In size, it was described as small but not a midget A/C.

The A/C waspainted a pale blue-green, and had red roundels near the wing tips, possibly top and bottom and possibly also on the fuselage aft of the trailing edge of the wing. Instead of a greenhouse, the A/C had windshields in front of the two cockpits. The only armament carried was one free gun (a 7.7 or 6.6 mm) mounted in the rear cockpit. The A/C had radio and was equipped for photography. While it could carry bombs, no bombs for it were carried on the submarine and it did not go on any bombing missions. The A/C is believed to have had a range of 500 to 700 miles, assuming an average speed of 120 to 140 knots, as the longest trip made lasted about 5 hours.

The A/C was carried in a water-tight hangar, just forward of the submarine's conning tower. Hangar doors opened forward. The wing was removed when the A/C was taken aboard. Possibly both floats and the propeller were also removed when it was put into the deck hangar for housing, and the rudder and tail dismantled.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

"The launching was from a catapult, located midway between the hangar and the bow of the submarine and not covered by any housing when the submarine was submerged. The catapult was believed to be actuated by compressed air. When the plane returned after a flight, it landed on the water near the submarine and was hoisted aboard by a small crane or derrick. Hoisting the A/C aboard, moving it into the deck hangar and making ready to submerge took between 20 minutes and half an hour.

In addition to the regular crew of pilot and rear seat man, 3 or 4 aviation mechanics were attached to the submarine. Their sole duties were handling the A/C and keeping it ready to fly. Neither they nor the A/C crew were involved in the submarine's ops.

(HQ Second Aust Army Int Rev No 73)

16. SECURITY AND CENSORSHIP.

SECURITY - THE WRITING ON THE WALL.

In the days before the war there always appeared to be a small section of the community who derived some enjoyment from inscribing their names in public places.

Pencilled on the white-washed walls of conveniences, scratched into the paintwork of park seats, cut into the bark of trees, were thousands of names. Whitewash and paint would be renewed, only to bring forth a fresh crop of inscriptions.

With the advent of war, many of these people became members of the Armed Forces and continued their peculiar hobby, with the usual addition of regimental number, unit and date.

This practice tended to become a headache for Unit Security Offrs, for the movement of whole bdes and even divs could be traced across AUSTRALIA by a study of these inscriptions, which were always easily visible to civilians.

In one case a div moved to a new location and five days later a number of menu cards were collected from cafes in the nearby town and examined by Security pers. From these cards alone a complete order of battle was built up, which incl most of the unit locations.

Some months later an inspection of a small QUEENSLAND town used as a staging area revealed the movement of a large portion of 7 Div and Corps tps to the BRISBANE Area.

Under NEW GUINEA conditions the scribblers have less scope. Screens are substituted for whitewashed walls and the bark of coconut trees is unsuitable for carving.

However, it still persists in base areas where civilian buildings remain, and a crashed A/C in a fwd area was found to bear on its metal skin a number of names together with unit designations.

Owing to the increased attention given to Security trg, the general standard has improved and camp sites are no longer marked with the unit title.

The question of thoughtless pers writing their names and units in public places may not seem very important, but it is the odd case that can easily neutralise the security of any op. The undesirability of this practice should get a mention in any Security lecture given to the tps.

It has been noticed that although the Japs tps do not appear to be security-minded, they do not leave such a record of their unit movements. We should therefore eliminate this entirely unnecessary breach of security.

(HQ Second Aust Army Int Rev No 73.)

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

CENSORSHIP.

Envelopes have been sighted in censorship bearing the location address of field units. These envelopes have been franked and bear the Unit Censor Stamp which reveals that some offrs have failed to read the face of the envelopes in addition to contents thereof.

Such omissions greatly negative the value of franking.

(HQ Second Aust Army Int Rev No 73).

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

APPENDIX A.

9 AUST INF BDE INT SUMMARY NO 26.

COMBINED OPERATIONS IN RETROSPECT.

The following notes are taken from a translation of a captured Jap document detailing the lessons they learned from the combined ops which resulted in the capture of WAKE ISLAND.

JOINT ACTION OF ALL FORCES IN THE INVASION OF AN ISLAND.

(a) General tactics for seizing a strategic island

(i) A plan of attack identical or similar to one previously employed must not be used. If it is, we are likely to sacrifice the essential element of surprise and the enemy will probably be able to anticipate our actions, so that the result of an attack on the enemy posns will be only to incur heavy losses.

(ii) The plan of attack should not be rigidly laid down in adv, but latitude should be given for subsequent modification dependent upon the progress of the ops. Any opportunities which emerge must instantly be seized and exploited.

(iii) The issue of victory lies in the constant maintenance of the offensive spirit. The great success of this op was due, in the final analysis, to the fact that throughout the op the offensive spirit was continuously displayed and all ranks fought without regard for their own lives.

Only carefully picked tps who have had a specialised trg should be employed in these ops.

(iv) In an opposed landing timely diversions and feint landing should be employed. These diversions must be carefully co-ordinated with the main plan of attack, or else they will hinder rather than help. For instance, at WAKE ISLAND the feint attack preceded the main assault and consequently had the effect only of putting the garrison on the alert rather than of diverting their forces. For the same reason it is necessary to have a comprehensive comm network, so that all forces can be quickly informed of any change of plan.

If the landing beaches are very restricted so that there is no possibility of carrying out a diversionary assault, then it is necessary to land in overwhelming force, or to carry out a most thorough preliminary bombardment and to give strong covering fire during the actual landing.

(b) Leadership during the invasion of a strategic island

(i) It is most important to secure unified command in such an op. Only in this way is it possible to control the many different units participating in a combined op and to ensure that unanticipated difficulties are successfully overcome.

(ii) The leaders must set an example of courage and spirit which will inspire all ranks. It was very noticeable at WAKE ISLAND that the fine example and courageous fighting of junior offrs encouraged the whole force.

(c) Landing on a strongly defended strategic island

(i) Preparations

The execution of an op of this type must, as far as possible, be simplified by the most detailed preparations, particularly owing to the fact that it is difficult to maintain control over tps at night when they easily become scattered. For this reason also it is advisable to use picked tps.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

The following factors should be considered :-

The organisation and eqpt of the tps involved must be such that they can fight independently.

It should be remembered that if it is impossible to overcome the enemy's main btys during the night, then it may be impossible to provide fire sp from ships during the day.

If an island has fringing reefs then it is better to carry out a landing at low tide.

(ii) Control and speed of the Landing Boats

The leading boat must approach at half speed or low speed until the isnald can be definitely seen from the large landing lighters. To lead the boats in close formation to within the range of the enemy's derence guns is bound to be extremely dangerous. In landing ops in the dark however, and on the long swells around an island in the ocean, if the boats deploy as far out as four thousand metres from shore, the lighters will find it extremely difficult to hold their course and almost impossible to reach shore at a designated point. In the WAKE op, although four lighters were led to within three to four thousand metres of the shore, none of them arrived at the appointed place or time. Furthermore, two lighters, which accompanied a patrol boat, lost sight of her on the way because she increased speed. It is necessary for the leading boat to have a low-powered signal light on its stern for signalling to the rest of the boats.

The normal speed for the patrol boats, namely 12 knots, should be the speed employed for the ship to shore movement. At this speed the aiming of defensive fire is most difficult for the enemy. It is essential to unload very quickly as soon as the beach is reached, and everything should therefore be ready prepared in the bow of the boat.

At WAKE ISLAND the boats approached at standard speed to about one thousand metres from shore, that is, until the sandy beach was discernable, then speeded up for about two hundred metres, resumed standard speed, and beached very gently, feeling but two dull shocks. Furthermore, although a patrol boat was in the beam of the enemy's searchlights and was receiving fire before reaching shore, the handling of the searchlights was unskilled, the anti-aircraft guns all over-shot, and the machine gun bullets struck near the boat's stern. From this it can be seen that aiming was very difficult.

Remember that it is easy to mistake the landing point at night.

(d) The Fight after Landing

It is essential to maintain the element of surprise. Long range rifle shooting is, therefore, undesirable as it reveals your posns and puts the defenders on the alert. The weapons to be used in this form of attack are grenades and grenade dischargers, both of which are particularly effective against dug-in posns. It is possible, with good trg, to use these weapons against an enemy posn which has been entirely surrounded without endangering our own tps.

(e) Co-operation of Ships and Aircraft

The destruction of land batteries or airfields by bombardment from ships' guns is most difficult. It is also difficult for A/C to destroy gun emplacements and to carry out detailed recce of enemy posns.

Co-operation between air and land forces is both very desirable and most effective and is especially valuable if we are weak in arty, while the enemy is strong in both arty and tanks.

(f) Signals

During the course of landing it is important to keep signal eqpt dry.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

In the WAKE ISLAND op, either because the eqpt got wet or was damaged, comms broke doen and as a result it was most difficult to maintain control.

The methods of comm should be as simple as possible and arrangements must be made beforchand for alternative means, so that comms can be maintained regardless of the situation.

(HQ Second Aust Army Int Rew No 73).

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Max Speed: 288 miles per hour at 13,500'

Rate of Climb:

Service Ceiling: 30,000-ft
38,000-ft (absolute)

RANGE:

	Range in Statute Miles	Cruising Speed	Bombs (Max)	Fuel Imp. Gal.	Fuel U.S.Gal.
Max. Cruise	1450	220	1760-lbs or 1 x 1760-lbs torpedo	627	755
Normal	1800	180		627	756
Max. Fuel	2760	180	nil	1123	1353

Radio: W/T carried; R/T carried. Radio compass carried.

Armour: Nil

Armament: 1 x 7.7 mm MG in nose.
1 x 7.7 mm MG in top turret.
1 x 7.7 mm MG in each side blister.
1 x 20 mm cannon in tail.

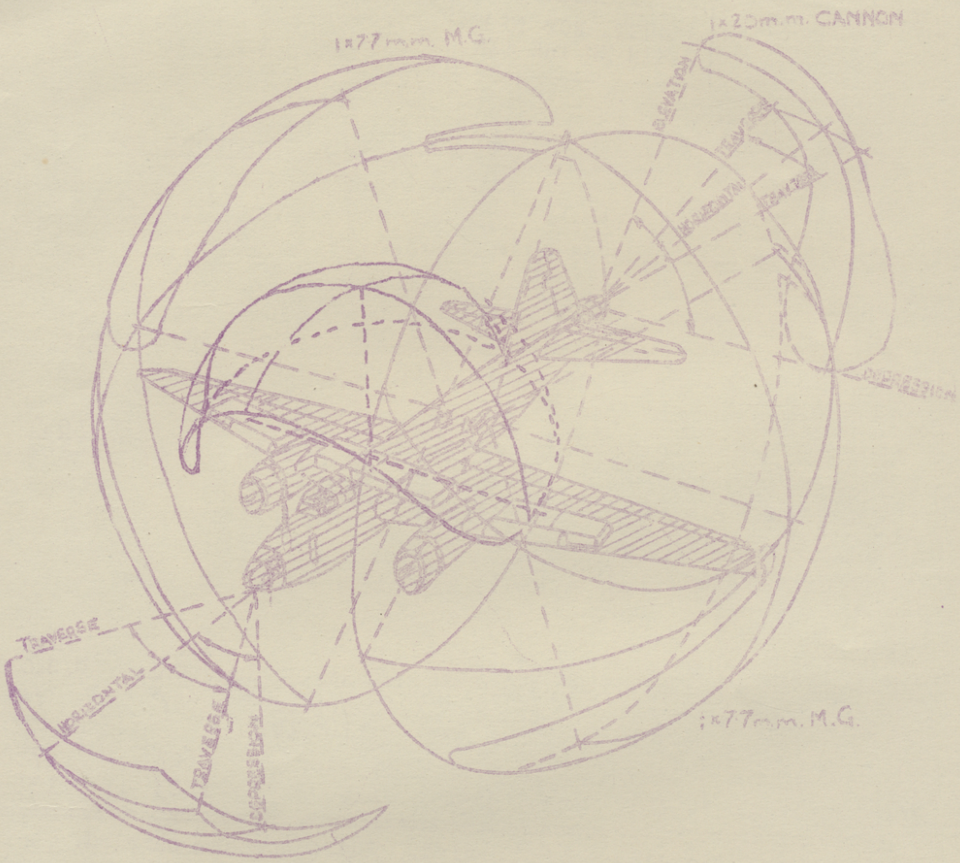

Late reports indicate a belly gun, possibly two, firing from what seems to be a chute. These are 7.7 mm and appear to be fixed, firing into blind spot beneath the tail.

Ammunition: 90 rounds for 20 mm cannon.
300 rounds for each 7.7 mm MG.

Vulnerability: Eight fuel tanks in wings and fuselage, 4 between engine nacelles and two outboard of engine nacelles. They are of the self-sealing variety per medium of rubber pads held in place by gridded pressure plates, and have not proven effective.

Intelligence Summary No. 39
APPENDIX 'C'

9 AUST INF BDE INT SUMMARY No. 26
Appendix
FIRST AUST. ARMY
INTELLIGENCE SUMMARY No63
APPX C

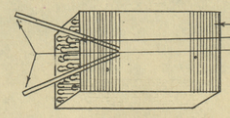

JAPANESE BOOBY TRAPS

DEVICE USING BOTTLE
Rubber bag.
Mixture of potassium chlorate and .... (T.N. unreadable)
Air space
Benzine or kerosene
Sulphuric acid.
(Effect- If bottle is picked up and shaken or tipped over sulphuric acid coming in contact with mixture in cork would cause small explosion and ignition of benzine.
Use - Booby trap for incendiary effect.)

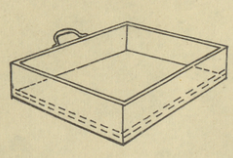

DEVICE USING PING PONG BALL.
Cotton soaked with KAMEREON.
Seal after filling with glycerine.
Glycerine.
(Effect - (1) KAMEREON (Nitric acid probably) may attack ball and on contact with glycerine cause a fire.
(2) If device is troden on or broken glycerine and kamereon will come in contact)

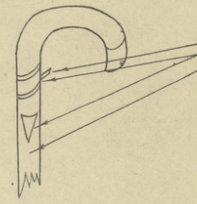

DEVICE USING MATCHBOX
Yellow paper cover
Match sticks
Twisted yellow paper
(Probably incendiary device which ignites when twisted paper pulled or matchbox opened.)

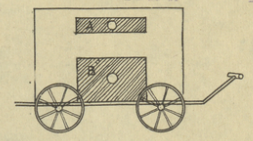

1 AUSTDIV
Intelligence Summary No. 90
APPENDIX 'B'

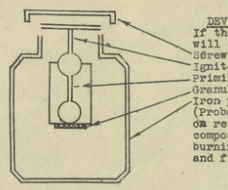

DOUBLE BOTTOMED TRUNK
Device in which booby traps can be placed. (Oil cans and other items can be used.)

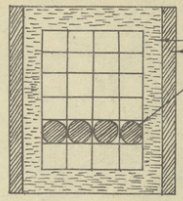

PISTOL DISGUISED AS CANE
Trigger (easily concealed by metallic band)
Mechanism.
Explosive chamber
If not looked at closely will be mistaken for a cane.
(1. May be kept by a prisoner and used as a pistol against his captors later to effect his escape.
2. May be ordinary souvenir booby trap.)

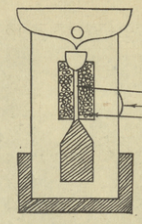

DEVICE CONCEALED IN FIREWOOD CART
(A) Inductive explosive.
(B) Sympathetic explosive.
(A) Probably primer charge fired by ordinary electric detonator. Wired up so that it can be fired from a distance when enemy captures position.
(B) Main charge.

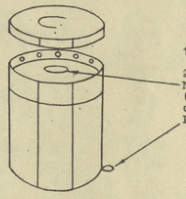

DEVICE USING STEEL CYLINDER
If the hemp rope ignitor is pulled will explode within 10 to 30 minutes.
Screw cover
Ignitor made of hemp rope
Priming charge
Granulated powder
Iron plate
(Probably factory made device left behind on retreat. Cover screwed and match composition igniter starts delay train burning. Cylinder filled with explosive and fires when enemy has taken up position.)

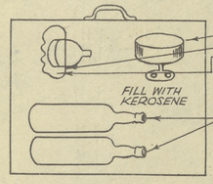

DEVICE USING CANDY BOX
Cylinder shaped dynamite.
Scrap iron
Induction detonators.
(Probably ordinary charge fired by electric detonator. Placed in biscuit tin for purposes of disguise.
Firing may be by trip wire electric circuit or by plunger type firing from safe distance.)

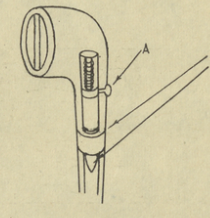

DEVICE USING FLASH LIGHT
When switch is pressed, explosive is ignited.
(Switch completes circuit thro electric detonator.)
Explosive
Switch
Bicycle ball bearing. (probused to give shrapnel.)

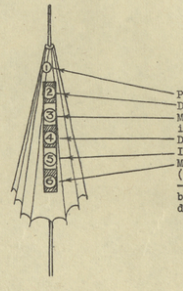

DEVICE USING EMPTY TOBACCO TIN.
1. The top of container is filled with nails and scrap iron.
2. Explodes on ignition.
Nails and scrap iron (shrapnel effect)
(Tin filled with explosive and fired by ordinary detonator and fuse.)
Powder train.

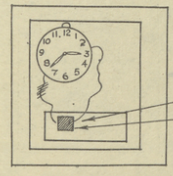

DEVICE USING TRUNK
Clock
Glycerine
Manganese oxide - potassium chlorate.
Explosive
The bottles will fall and cause ignition from the unwinding of the screw on the clock.
(Incendiary and (explosive) device.
Bottles may contain acid and clock used to pull corks at certain time.
Acid, glycerine and oxidising agent when mixed would create explosion and fire.)

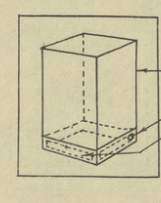

DEVICE USING PIPE
Threaded joint.
Explosive
Can be mistaken for fountain pen at first glance.
(Unscrewing stem of pipe on removal of A probably releases striker pin which fires percussion cap and explosive.)

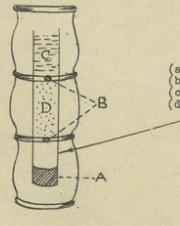

DEVICE USING PARASOL
Phial containing sulphuric acid
Detonating fluid
Mixture of detonating and ignition fluid
Detonating fluid
Ignition fluid
Mixture of heat producing acid
(Explosive and incendiary device -when parasol opened probably breaks acid phial which ignites detonating and ignition mixtures)

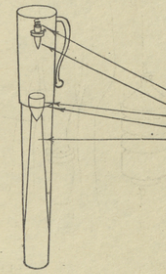

DEVICE USING DRY CELLS
(Ordinary type of electric time bomb.)
Explosive
Detonator

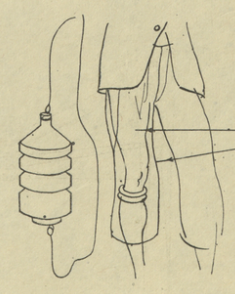

DEVICE USING A TOFU OR KEROSENE TIN.
Kerosene tin
Hole for inserting detonator.
Explosive made of cast iron.

DEVICE USING BAMBOO CYLINDER
(a) Kerosene
(b) Cotton filler
(c) Glycerine
(d) KAMEREON
Seal after filling with kerosene
(Probably incendiary device which ignites after a certain time.
i.e. When (c) & (d) mix sufficiently)

DEVICE USING PISTOL DISGUISED AS FOUNTAIN PEN
Firing Spring.
Firing pin.
Explosive.
Threaded joint.
Made of iron.
(ordinary booby trap device - attempt to screw off pen top releases spring loaded firing pin. Body of pen contains detonator and explosive.)

Thigh
Trousers.
(Probably moving leg of body would set off booby trap of same standard friction igniter type.)

9 AUST INF BDE INTELLIGENCE SUMMARY NO 27

(Based on infm received up to 2359 hrs 28 SEP 1943).

1. This summary is issued for distribution down to coys or equivalent of 9 Aust Inf Bde.

2. (a) Infm marked "SECRET" will be regarded by offrs as such, and WILL NOT be communicated to any non-commissioned rank, other than key personnel such as Int Personnel.

(b) Infm marked "SECURITY" will be passed on to all ranks at the same time warning them each time that infm is "CONFIDENTIAL" and will NOT be talked about to other than Army personnel.

(c) "GENERAL" infm will be passed on freely to all ranks.

3. Comd 9 Aust Inf Bde directs that coy comd (or equivalent) will ensure that infm under heading "SECURITY" and "GENERAL" is conveyed to all ranks and that a short controlled discussion is held concerning same.

4. Map of SWPA, issued to coys(or equivalent) is to be used in conjunction herewith. The latitude and longitude of place names which are not well known are given in the summary, to enable easy identification.

5. Queries will be referred to unit int secs who will supply answers as promptly as possible.

Demonstration coy trg, Educational lectures, discussions of SWPA situation, MT & carr maintenance.

2. OPERATIONS (based on infm received at HQ Second Aust Army up to 1800 hrs 20 Sep 43).

AUSTRALIA.

A possible enemy submarine was sighted 370 miles North by East of BRISBANE on 15 Sep.

12/15 enemy bombers made a night raid on an airfield in the DARWIN Area on 16 Sep causing slight damage but no casualties. On the same night 2 enemy A/C ineffectively bombed ONSLOW (WA) Area. A second enemy night raid in the DARWIN airfields area on 19 Sep by 9 enemy A/C, was ineffective.

SOLOMONS.

Fighting continues on ARUNDEL ISLAND, the enemy garrison being located in BAMBOE village between two advancing American forces. A patrol on GANONGGA ISLAND captured large amounts of enemy stores and amn on 13/14 Sep.

Enemy air attacks on Allied posns at GUADALCANAL, MUNDA, RUSSEL IS and VELLA LAVELLA were mainly of a harrassing nature causing minor damage and casualties. One heavy enemy attack by 40/60 A/C on MUNDA and VELLA LAVELLA caused some damage and casualties. 1 enemy A/C was shot down during these raids.

Heavy Allied attacks were made on the BUIN FAISI Area during the week. Allied A/C in 954 sorties caused widespread damage at KAHILI and BALLALE airfields and shipping in the area. During these raids 16 grounded enemy A/C were destroyed or damaged and 70 intercepting fighters were shot down. Enemy posns on KOLOMBANGARA and VELLA LAVELLA and VILA and BUKA airfields were also attacked.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

NEW IRELAND - NEW BRITAIN.

Little movement into the SWPA from the North has been reported. Such movement consisted of 3 destroyers and 5 freighter transports 71 miles NW by North of MUSSAU ISLAND on 16 Sep, course South by East. Around NEW BRITAIN, enemy barge activity only was reported.

NEW GUINEA.

Salamaua.

On 12 Sep our forces occupied the port, peninsula and town of SALAMAUA. The remaining enemy garrison fled North in an endeavour to link up with the Jap forces at LAE.

Following an unopposed landing North of the BUANG RIVER Mouth, our forces moved overland, occupied MARKHAM POINT and LABU 1, and ther appear to have driven the remaining enemy into the LABU Swamp Area.

Lae.

Overcoming enemy resistance, our Western Force entered LAE township 1240 hrs 16 Sep. On 18 Sep tps from our Eastern Force relieved our Western Force which moved to the vic of MAC'S CAMP (2 miles North of NADZAB); with forward elements North of CAMP DIDDY patrolling towards BOANA. Other units were in the YALU Area.

On 18 Sep forward elements of the Eastern Force entered LAE, after overcoming strong opposition at NEW YANGA, and at a river crossing 3½ miles NNE of the Mouth of the BUSU.

Part of the Jap force at LAE probably evacuated by barge to FINSCHHAFEN, and others have escaped overland towards SIO.

Sightings of enemy and contacts have been made with small enemy parties along the BUMBU RIVER. These enemy parties are probably rearguard elements to prevent contact by our forces with the Jap main body of escapees who possibly used the BUMBU RIVER route.

Ramu Valley.

In the RAMU VALLEY, Jap patrol activity has centred chiefly around KAIAPIT, DUMPU and BOANA.

Natives' reports mention enemy movement from the RAI coast and Upper MARKHAM to the KAIAPIT Area; also the presence of enemy tps at DUMPU. Other reports state that the Japs occupy the villages of NARAWAPUN and BAMPINGYETAN near KAIAPIT, where work on an airstrip is proceeding.

4. ENEMY TACTICS METHODS AND HABITS -JAP FLAG SIGNALS. SECURITY.

Attention is drawn to the Jap use of white flags as described in the following extracts from "Battalian Hand Flag Signal Regulations".

6. Preparations completed - Alternate short strokes of red and white flags up and then down.

7. Sudden attack - Wave a white flag over the head several times.

8. Encirclement - Show a white flag in such a way as to portray encirclement.

9. Advance - Spread out a white flag raising it high in the direction of advance.

10. Cease - Raise a white flag and lower it immediately.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

13. Commence firing - With a white flag describe a circle above the head.

(HQ Second Aust Army Int Rev No 74).

JAPANESE LAND MINES. SECURITY.

Enemy mines have been discovered near GWAIBALOM in the KOMIATUM Area. Index discs of half an inch diameter have also been found nearby and from the evidence available it would appear that they may be placed on trees to indicate the posns of the mines.

(HQ Second Aust Army Int Rev No 74).

7. ENEMY ARMAMENT AND EQUIPMENT.

POSSIBLE FLOATING BOMB. SECURITY.

Reports have been received from Allied A/C of the sighting on 5 Sep of six yellow cylindrical objects on the water approximately 34 miles South of GASMATA.

The objects were one foot in diameter and protruded one foot out of the water. They were apparently anchored and spread at irregular intervals for a distance of approximately six miles.

Comment: 9 Aust Inf Bde Int Summaries Nos 22 and 24 contained reference to a floating "yellow box" which exploded on the approach of an A/C. Although the cylindrical types are considerably smaller than the boxes, they are probably similar in construction and purpose.

(HQ Second Aust Army Int Rev No 74).

JAPANESE AIRCRAFT. SECRET.

The sixth of a series of appendices containing infm on enemy A/C is attached. The plane is the Jap TYPE 97 4E F/B HAVIS.

JAPANESE 20 mm AA - TK A GUN TYPE "98". SECURITY.

General.

This weapon is air cooled, gas operated, embodying the general principles of the Oerlikon.

Barrel.

The barrel is fastened to the body by means of an interrupted thread bushing, which is positioned and locked in place by screws. Fitted to the muzzle is a recoil reducer similar in design to that used on the Boyes Tk A Rifle.

The recoil of the piece is approximately 2 inches and is constant, but may be regulated by means of adjusting screws.

Magazine and Feed.

Bren type
Capacity 20 rounds.

Gun Carriage.

Is of the dual purpose type and may be easily converted for whatever role required.

When gun is in firing posn an outrigger is attached to equilibrator housing. The flase axle is then rotated to the rear approximately 180° thus raising the wheels off the ground. Wheels can then be removed from the axle, by means of a spring release catch. Carriage is levelled by jacks attached to the outrigger and the trails thus giving a three point suspension and false traverse of 360°

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

Elevating gear consists of two helical segment gears and pinions.

The equilibrator is of the adjustable spring cable type.

CHARACTERISTICS.

GUN:-

Calibre	- 20 mm
Length of Barrel	- 4'9⅛"
Length of Rifling	- 4'1½"
Type of Rifling	- Uniform RH approximately 2 turns 8 lands
Diameter of Chamber (at Breech)	- 1.21/32"
Elevation	- 85° approximately
Traverse	- 360° shoulder controlled.

CARRIAGE:-

Overall length of gun and carriage (in travelling position)	- 9 feet
Total weight of gun and carriage	- 837 lbs
Weight of carriage	- 635 lbs

16. SECURITY AND CENSORSHIP.

SECURITY.

AUSTRALIAN FD SECURITY IN ATTACK - NG - AUG 43.

The following paragraphs extracted from FSS reports from NEW GUINEA emphasize the high value of FS work in attack and illustrate the energetic gallantry of our own FS men.

DOCUMENTS.

During recent ops around KOMIATUM, BOBDUBI, THE COCONUTS and LAVERS KNOLL large quantities of enemy documents were collected by Field Security pers who went forward with Bn Coys. Units were most co-operative - the Commander of one Bn issued instns that all documents were to be handed immediately to FS NCO. Pers of another Bn assisted in the cleaning up of KOMIATUM RIDGE.

The largest individual collection in one day was made by a FS L/Cpl who collected over 25 lbs weight of documents incl maps, op orders, and other valuable documents at OLD VICKERS POSITION, BOBDUBI RIDGE. This was done during and immediately after the attack. The L/Cpl was twice attacked at close quarters and had to kill three of the enemy before the completion of his task.

Some delay and damage to packages occurred in getting this mass of documents back to Bde and Div HQ, but every effort was made to get back obviously important documents, such as maps of the SALAMAUA defence posns, immediately after discovery.

PRISONERS OF WAR.

After the occupation of LAVERS KNOLL, five Japs were trapped in a pillbox, and efforts were made by F S pers to capture them

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

alive, but, during the initial attempt, two of the FSS Section were wounded by grenades. Finally, with the assistance of Bn tps, the pillbox was blown up, and two of the enemy remaining alive were taken back for medical attention and interrogation.

Attempts to take other prisoners were frustrated by the language difficulty and the unwillingness of Japs to surrender unwounded. Arrangements are being made for Section members to be taught a few simple words of Japanese to enable them to call on individual enemy to surrender. It is hoped that more prisoners may be obtained at a later stage of the ops.

MATERIAL.

Large quantities of enemy weapons, amn and eqpt were captured, especially at KOMIATUM RIDGE, but, owing to the impossibility of obtaining native carriers, most of it has NOT yet been recovered. It was gathered and stored against the weather, as far as possible, to await collection at a later date.

The difficulty of transport has been a constant problem in the handling of captured enemy material in this campaign.

GENERAL.

During the ops 12 members of the section were in action at various times with inf coys and forward of coy HQ. In order to cover the front, and with permission of Div and Bde HQ, NO pers were retained at Div HQ. Only pers not in action were those who had to be left to guard stores which became scattered at various points during transfers of HQ and the switching of Ls of C.

(HQ Second Aust Army Int Rev No 74).

JAP COUNTER INTELLIGENCE. SECURITY.

Evidence of the measures taken by the Japs to counter the activities of our various Int organizations is revealed by the following extracts from documents recently captured in the S W P A.

(i) "As infm from prisoners is most reliable, the taking of prisoners is very profitable from the int angle. The enemy is inept at hand to hand fighting, and if we act with daring, the taking of prisoners should be comparatively easy. Each BUTAI, especially front line BUTAI (and above all, outposts and patrols), should make use of decoy attacks, raids, traps, etc. If wounding is unavoidable, aim at the thigh. If a fatal wound is given, every care taken. Positive and energetic measures and encouragement by the offrs are necessary to improve the situation with regard to taking of prisoners. Immediately after a battle, no opportunity of taking prisoners should be lost".

The moral is obvious.

(ii) "1. Do not record the names, conditions or strength of our BUTAI on maps, because plans and the movements of our Army may be discovered.

2. Any printed orders (documents) to be avoided below Bn.

3. Printed orders, int records etc should be burned after completion and not held in custody.

4. Coy and lower organisations will not maintain battle reports and field diaries in custody but submit them to the proper authority.

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

The enemy have a clever intelligence system and various methods of discovering plans and movements, so each TAI must adopt all necessary secrecy."

(HQ Second Aust Army Int Rev No 74).

VISITORS.

There are persons who cannot keep infm to themselves, and the further they go into op areas, the more they are liable to talk, and to write letters containing military infm of extreme value to the enemy.

Unless they happen to be subversive, and gain contact with the enemy, the extent of the damage they can do in a forward area is limited owing to the fact that comms are controlled, but once back in a rear area they are not so closely bound by censorship, and in addition their chatter can reach a large civilian audience.

The time factor of air travel must always be considered. Infm can be released all over the world in a few days by a visitor who manages to travel by air. One can travel from NEW GUINEA to the Mainland in a few hours, and to AMERICA or EUROPE in a few days. Thus infm can readily get back to the enemy without through the most roundabout channels whilst it is still fresh.

Visitors to forward areas will all have some credentials - they may be members of the forces, our own or Allied, of high or low ranks, War Correspondents, Public Officials, civilians in the employ of the Forces or C C C pers, but nevertheless the formation authorising the visit should in all cases advise the formation or unit to be visited stating where possible the reason for such a visit.

Visitors, must of course, be assisted in every way to carry out their tasks, but should be discouraged or even prevented from exceeding it and visiting places or seeing things that do not concern them. This particularly applies to persons who are not members of the Forces.

Should a visitor arrive prior to advice of his movements then he should be treated with certain suspicion until such time as he is checked through higher authority.

It is well to remember that credentials are not always what they should be, and if any doubt exists, it is always safest to signal or telephone for confirmation.

The following is quoted as an example of the care needed in this regard :-

Recently a civilian, in the employ of the Forces arrived at MERAUKE. His credentials appeared to be in order, but no advice was received by Force HQ from First Aust Army in regard to his arrival. Force HQ signalled First Aust Army, and although his credentials, as supplied by the Force concerned, were in order, it was found on checking with the Commonwealth Security Service that he was completely undesirable.

(HQ Second Aust Army Int Rev No 74).

AUSTRALIAN WAR MEMORIAL AWM2020.71.8483

'M A V I S'

Type 97, 4E, F/B.

Originally Manufactured by: Kawanishi

Crew: Seven

Engines: 4 Kinsei "43", 14 cylinder, twin-row, air-cooled radials, 900 horsepower each at 13,000 ft. (Supercharged type)

Dimensions: Wing Span 131'0" Length 82'0" Height 20'7".

Weights:	Empty	Full Military Load	Overload
	25,000 lbs.	44,100 lbs.	50,000 lbs.

Maximum Speed: 160 miles per hour at 13,000 ft.

Rate of Climb:

Service Ceiling: 28,000 ft with normal load
31,000 ft empty.

R A N G E.

	Range in Statute Miles	Cruising Speed	Bombs	Fuel Imp Gal	Fuel U.S.Gal
Normal	1900	127	Nil	1450	1747
Max Bombs	1750	110	3500 lbs. or 2 x 1760 lb torpedoes	1450	1747
Max Fuel	2200	110	1200 lbs.	1950	2350
Max Fuel	2400	110	nil	1950	2350

Radio: Probably long range W/T and R/T on medium and high frequency. Radio compass installed.

Armour: Nil.

Armament: 1 x 7.7 mm MG in nose 2 x 7.7 mm MGs lateral 1 to each blister.
1 x 7.7 MMG dorsal hatch
1 x 20 mm Cannon tail turret

Ammunition: 300 rds per 7.7 mm gun
60 rds per 20 mm cannon

Vulnerability: Tanks are not self-sealing. Hull can be punctured by a climbing attack from underneath with very little opposition. Engines and centre section of wing extremely vulnerable to fire.

Remarks:

Tactical Data: Does not manoeuvre well.
