3rd March, 16

To the D.M.S. in Egypt,
Headquarters, Cairo.

Referring to your letter of the 29th ult., 157/21/19,
I have to report that the 1st Aust. Dermatological Hospital
took over the Barracks occupied by the D.B.I. Hospital. I
therefore do not know much about their treatment.

Santal oil by the mouth and self-irrigation was the
treatment for gonorrhoea.

Galyl was used for syphilis. Soft chancres were
were dressed with Black Wash and Iodoform.

Wm. D. Inglis Major.
C.O., 1st A.D. Hospital, A.I.F.
