(Exase heading not required)

Place Date Hour	Summary of Events and Information	Remarks and references to Appendices
eule, January. Sergues Ex. 1919. Roulers.	Luring this month the Company went into rest for the first time since arriving in France; however this was not for long, as assistance with Rumning and Mechanical Staff was asked for by the R.O.D. K.E.Depot, Bergues Exchange. The men as asked for were despatched to Bergues, where excellent work was done, the Train trews, owing to their knowledge of "Nord" rumning, being mostly employed working trains over the French idnes from Bergues Exchange and Dunkirk. Good work was also done by the Mechanical Staff, one instance of the work accomplished being stollows: Engine No 709, (T.olass type, N.S.W.Goot Railways) had been marked as being beyond repair by the R.O.D. R.E. Mechanical Staff at Bergues, owing to extensive imminume boiler defects; this engine was examined by the Sergeant Boiler Maker on taking up duties at Bergues, and in four days had repairs completed, and engine ready for traffic. Single line prevails on Section, Gordon House-Roulers and Roulers-Meenin Branch, the line from Roulers to Courtrai is double track; the lines generally are in good upkeep and condition. The traffic passing over the Section is normal, and consists of British and French Supply Trains and civilian traffic arriving at that station, the number of trucks handled for one day being 120, this consisted mainly of coal. Seven engines were taken over from the list Company, these engines are aminly employed as shunting engines and working local traffic. The Loco Depot was established at Inglemunster, this station, owing to the water supply, edg most suitable for watering and washing out, and also for coaling purposes. Water is also obtainable at Roulers, and is pumped through the medium of "Mereweather" pumps to water column. With the exception of the two deaths as mentioned, the general health of the Company has been good.  Good work is being done by the Train Crews loaned to the R.O.D.R.E. Depot at Outreau, large dumps are being moved from back to forward minumes areas, the crews being chiefly employed working trains from Boulogne to Mon	n
