1	to	3
1	to	1
1	to	2

† NIL
† RETAINED
† Despatched to

on.....

* Only to be included during operations.
† Cross out whichever is not applicable.

COMMANDERS DIARIES INSTRUCTIONS

AIM

1. The aim of a Commanders Diary is to provide data on which to base future improvements in Army training, equipment, organization and administration, and to furnish historians with a record of the activities of units and formations in operational and non-operational periods in peace and in war.

GENERAL

2. *Entries are to be made daily* on AF C 2118 (Adapted) each entry being initialled by the officer detailed to keep it.
3. Commanders Diaries will conform with the rules for drafting orders given in "Staff Duties (Australia)", Chapter 2, Section 12.

RESPONSIBILITY

During Non-operational Periods

4. A Commanders Diary is to be compiled by commanders of all formations.

During Operational Periods (1)

5. A Commanders Diary is to be compiled in duplicate by:
 - a. Commanders of all formations.
 - b. Each branch of the staff at formation headquarters commanded by a brigadier or above.
 - c. Heads of services not below the rank of lieutenant colonel.
 - d. Personal staffs and officers holding special appointments.
 - e. Unit commanders.
 - f. Commanders of a detachment of a unit when so ordered.

COMPILATION

6. Both original and duplicate copies are to consist of:
 - a. Cover (AF C 2119) (Adapted).
 - b. Index as printed on cover.
 - c. Narrative (AF C 2118) (Adapted).
 - d. Annexes as shown in the Index.
7. All details of the unit or formation (if a detachment is concerned, the name of the parent unit), period covered and enclosure numbers of the annexes are to be shown on the cover. If there has been a change of command since the last report, the date of assumption by the new commanding officer is to be included.
8. The annexes are to be assembled in the groups shown on the cover. If there are no enclosures for an annex NIL will be entered on the cover. If additional annexes are convenient for a particular headquarters, the relevant papers should be grouped as annexes starting at B.

for operations form Annex "Z", "TOP SECRET" the document. It is to be prepared and disposed of as

EVENTS

as well as map references), establishment, equipment and orders given. The day's fighting, including company movements. Commander with regard to equipment, tactics, organization

tential importance. Officers, men and equipment. Equipment captured. Employed in the time not accounted for. The type of

and to save work as much information as possible is to be included. Documents issued and received, routine returns, etc. All dates and the time of receipt or despatch is to be given.

the annexes, but need not give a precis of any of them.

DISPOSAL

13. **Original Commander's Diary.** This is to be forwarded monthly, unless otherwise ordered, by the seventh day of the succeeding month direct to AHQ.

14. **Duplicate Commander's Diary.** This must be clearly marked as a duplicate. It is to be sent separately from the original to AHQ one month after the original has been despatched but not before the former has been acknowledged.

15. When overseas, both copies of diaries are to be sent through the Army Records organization in the overseas theatre but at different times.

16. **TOP SECRET Supplementary Diaries.**

a. The documents referred to in Paragraph 9 together with a list of them made out on AF C 2118 (Adapted) must be placed in separate cover (AF C 2119) (Adapted). All details must be filled in and the cover clearly marked in red: "ANNEX Z — OFFICER ONLY". It may be convenient to group the papers by appendices.

b. Supplementary diaries must be forwarded under the normal rules for TOP SECRET correspondence, to AHQ. The inner envelope must be plainly marked:

TOP SECRET
ANNEX Z to

Commanders Diary of.....(Formation or Unit)

From.....to..... (Dates)

c. The duplicate supplementary diaries must be despatched as shown in Paragraph 14 as soon as receipt of the original has been acknowledged.

AUSTRALIAN MILITARY FORCES

OFFICE OF THE SCIENTIFIC ADVISER TO THE MILITARY BOARD

**AUSTRALIAN ARMY
OPERATIONAL RESEARCH GROUP**

ANNEX C/1

CONFIDENTIAL

AUSTRALIAN MILITARY FORCES

1 RAR FWD
FSPB CORAL

041010H Jun 68

CONFIRMATORY NOTES TO CO'S ORDERS
ISSUED 041130H JUN 68

Reference: A. 1 ATF FragO 8 to OpO 19/68.

Time zone referred to in these orders: HOTEL.

1. Situation.

a. Enemy Forces.

(1) It appears that enemy forces have pulled back to the east of AO BONDI and AO NEWPORT, under pressure of ground, air and artillery strikes. 7 NVA Div is probably regaining its combat strength from infiltration groups. There are no indications that 7 NVA Div, which possesses the capability to mount a regimental attack by night against either FSPB BALMORAL or CORAL, intend to do so in the immediate future.

(2) Enemy losses in AO SURFERS to 031200H Jun 68 are as follows:

KIA (BC) - 237 NVA
KIA (poss) - 56 enemy
PW - 12 (1 VC, 11 NVA)
Detainee - 1
Hoi Chanh - 1 NVA

Weapons - Crew Served - 35
 Individual - 94

b. Friendly Forces.

(1) No US battalion will relieve 1 ATF in FSPB CORAL.

(2) 3 RAR is to move by air from FSPB BALMORAL to NUI DAT on 5 Jun. A deception flight plan to FSPB CORAL has been requested.

(3) C Sqn 1 Armd Regt is to move to NUI DAT on 5/6 Jun.

(4) A Sqn 3 Cav Regt is to provide escorts for convoys moving between FSPB CORAL and NUI DAT, and is to secure and clear the road between FSPB CORAL and TAN UYEN until the rear party convoy is out.

c. Atts and Dets. No change except:

(1) 1 Tp C Sqn 1 Armd Regt reverted to C Sqn 1 Armd Regt command at 040800H Jun.

(2) 1 Tp A Sqn 3 Cav Regt reverts to A Sqn 3 Cav Regt command AM 6 Jun.

(3) 102 Fd Bty remains in direct support until AM 5 Jun when it flies out to NUI DAT. 161 Fd Bty then becomes direct support battery.

(4) Engrs less B Coy mini team revert to 1 Fd Sqn command at 060800H Jun.

/2.

ANNEX A TO
1 RAR OpO 6/68
DATED 12 JUN 68

EN SIT

Organisation.

1. At the present the enemies org in the area of and the areas surrounding AO BIRDSVILLE (modified) is fluid. There are a number of reports confirmed and unconfirmed of changes in the En Orbat.
2. The fol units are thought to be in the area:
 - a. 273c Regt
 - b. THU DUC Regt.

En Locs.

3. 5 VC Div is thought to be NE of SAIGON in the Northern BA BIEN/Southern War Zone D area.

Past En Activities.

4. Within AO BIRDSVILLE (modified) the en has previously used mors with good effect. Located base plate posns are listed at Appendix 1.
5. There have been a number of 122mm rkt sites used by the en in the past. These are listed at Appendix 2.
6. Attached as Appendix 3 is an excerpt of an interrogation report which deals with the tac doctrine of the en in the use of the 122mm rkt.

En Intentions.

7. It can be expected the en will continue in his efforts to infiltrate tps into SAIGON. In view of the loc of 5 Div, it is possible infiltration could occur through AO BIRDSVILLE (modified).
8. It is further possible the en will continue to attempt to utilise the rkt sites he has proved in the past.

APPENDIX 3 TO
ANNEX A TO
1 RAR OpO 6/68
DATED 12 JUN 68

EXTRACT OF INTERROGATION REPORT
ON TACTICAL EMPLOYMENT OF 122mm RKTS

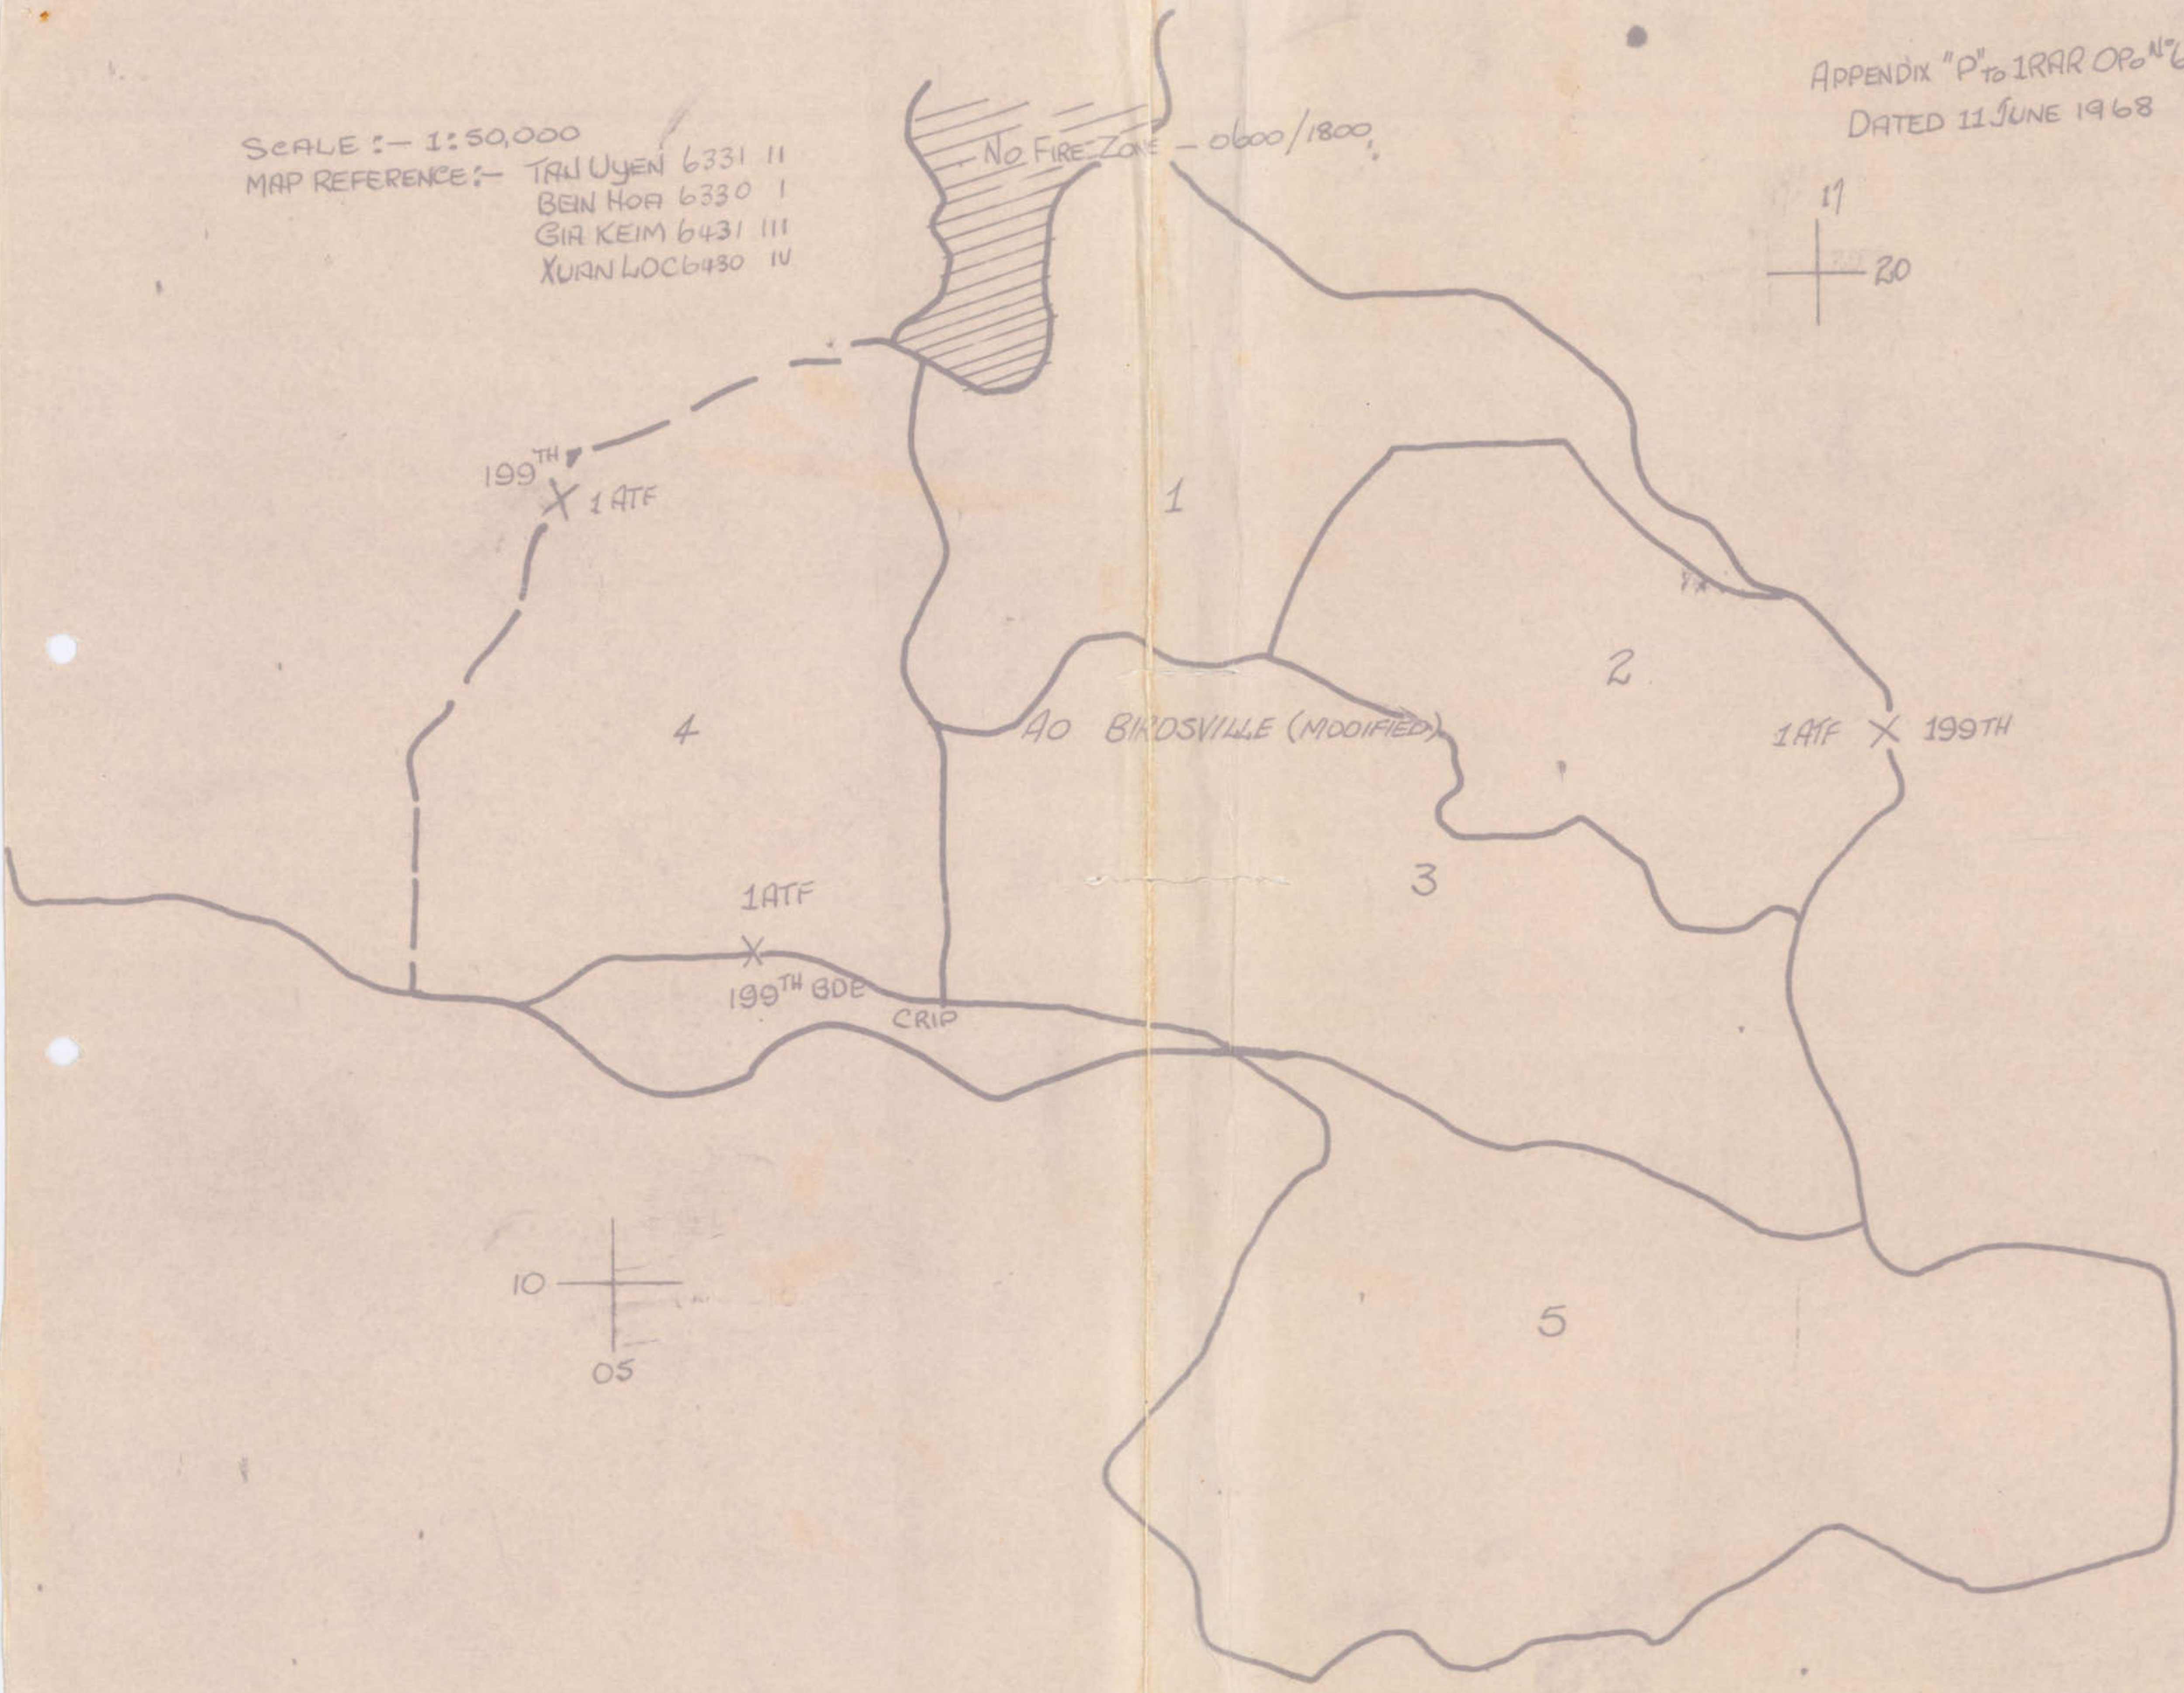

1. The launching site for 122mm rkts was selected on the basis of favourable terrain features. An open area was needed which provided the rkts with approx 100 metres of clear hard ground. Hard ground was needed to prevent the rkt launcher tripod from slipping from the back blast of the rkt when fired. The area of the launch site had to have easy accessibility to accommodate the bulkiness of the rkt and its eqpt. Rkts could not be fired from sandy areas because they did not afford the launcher a firm base. It was within the capabilities of the rkt launcher to fire from rice paddies by using the dikes which surround the paddies as a site to emplace the base plates. Source did not think it was advisable to fire the 122mm rkt from mountainous areas because of the difficulty in transporting the rkt and its launching eqpt over the terrain, but any mountainous area that provided the rkt with an area of easy accessibility and a firm firing platform could be utilized if the situation demanded. The launching site was selected by the Bn CO after the entire area surrounding the obj had been reconnoitered by the Bn recce elm. Launching sites could be loc from four km to eleven km from the obj but were usually loc approx nine km from the obj. Base defs did not extend to that distance and obsn was less likely to occur.
2. The 122mm rkt coys and crews were notified approx three hours prior to moving to the obj. The crews arrived at the launch site approx one hour prior to beginning the attack.
3. After arriving at the launching site, the launching tubes and tripods were aimed. Three holes per launcher (30 cm long by 20 cm wide by 15 cm deep) were dug for the pod plates of the launcher tripod. Each plate was inserted in one of the holes, and a metal stake was driven through a hole in the plate to secure it. H-shaped cradles were also const to be utilized as launchers. Rkts were laid across the cradles and wired into gps of five. All five rkts were fired together from the same switch.
4. The 122mm rkts were aimed by placing them on an azimuth with the obj. The azimuth was determined by using a compass. The rkts were then raised to the proper firing elevation. The correct elevation was determined by the use of a firing table. The rkts were then adjusted to the correct elevation by a level type device that measured the degree of elevation of the rocket.
5. Rkts fired from a rkt launcher were fired singularly, and rkts fired from the H-shaped cradle were fired in salvos of five. On 16 Feb 68, the 3d Bn. 208B Regt attacked TAN SON NHUT Airbase with 22 x 122mm rkts. These rkts were fired in both manners. Two sets of five rkts from the H cradle launcher were fired simultaneously with two rkts fired from the standard 122mm rkt launchers. Following the initial firing, five rkts were fired from each of the two tripod rkt launchers.
6. The 122mm rkt launchers were set up in a straight line with approx 15m separating each rkt launcher or gp of H-shaped cradles. The rkt launchers were not assembled until the unit arrived at the launching site. Approx 20 mins were needed to set up the launching site from the time the unit arrived until the time the rkts were ready to fire.
7. From 60 to 70 metres to the rear of the launching site, trenches were dug in order to afford the people firing the rkts a def posn.

Name and Type of Operation.

1. Operation TOAN THANG
- Phase 1 - Recce in force operation in AO BELIZE 3-4 May 68.
 - Phase 2 - Route denial operation in AO AYRE 5-12 May 68.
 - Phase 3 - Recce in force operation in AO BONDI 12-7 Jun 68.

Dates of Operation.

2. 030630H May 68 - 071100H Jun 68.

Location.

3. Phase 1 - AO BELIZE, centre of area YS 3290 near provincial border LONG KHANH/PHUOC TUY
Phase 2 - AO AYRE, centre of area YT 1318, NW of TRANG BOM, BIEN HOA.
Phase 3 - AO BONDI, centre of area XT 9328, north of TAN UYEN, BIEN HOA.

Command Headquarters.

4. HQ 1 RAR under command HQ 1 ATF.

Task Organisation.

5. a. Phase 1 (AO BELIZE)
- (1) Under comd from 030600H May - two combat engr teams
1 Fd Sqn

Supporting Forces

Artillery.

6. During the operation, the Battalion successfully used field, medium and heavy arty, both own and 3 RAR mortars, gunships and strike aircraft.

7. It is estimated that approximately 4000 rounds of field artillery were used on close targets.

8. Most of the gun and mortar fire was controlled by the FOs and MFCs. However, on many occasions, fire was controlled by platoons and sections, usually by sending their corrections on the company net to the FO and then back by normal gunner means. Whenever possible, either a MFC or FO accompanied a patrol.

9. Counter-mortar Fire. At least two enemy mortar positions were engaged successfully. Ptls found bodies on one and unexpended mor ammo on the other. Once the en mors had fired the initial mortreps from coys were extremely valuable. Once our own fire was put on the ground, mortreps became very difficult to produce but generally our own fire, even if not right on the en baseplate posns was enough to silence en fire. After en habits became known around FSPB CORAL suspected baseplate posns were engaged as soon as en fire was heard. This silenced the en fire.

Mors.

10. The 1 RAR Mor Pl fired approx 5000 rounds HE between 12 May - 6 Jun mainly in sp of sub unit contacts and during attacks on FSPB CORAL. In the counter-mortar role the pl proved very effective. There were no H and I tasks planned for the mors at 1 ATF, however harrassing fire was used by ni to engage likely targets selected by ground tps during their daylight activities.

11. When aval, mor APCs were continuously used, providing protection, good comms, flexibility and a firm baseplate.

Light Fire Teams.

12. As a very close fire sp weapon the gunships are extremely good. However, if gunships are used, all arty and mor fire has to check fire. The gunships do not produce the casualties that guns and mors can produce. Consequently, gunships must be sent out of the immediate area as soon as their task is complete and allow guns and mors to recommence firing. Gunships should not be used for depth targets or when the en is breaking contact by ni.

13. Considerable difficulty was experienced indicating loc of own tps by ni to gunships. During the first attack on FSPB CORAL, LFTs were directed easily initially by using a large fire as a reference point. When the fire went out, the LFTs became ineffective for 45 minutes. All coys now have different coloured ac beacon lts which are placed in a central pit by ni, to indicate own locs.

.../3.

CONFIDENTIAL

Tanks.

14. Tanks proved their worth conclusively on this op, providing very heavy intimate fire sp to inf and killing many en. RPG 2s appeared ineffective against the Centurion tank.

15. Problems which occurred and were resolved by all coys in working in jungle with armoured vehicles were:

a. Sound of tanks moving and timber falling interfered with fwd scouts hearing. Tanks moving in bounds of 50 metres overcame this problem.

b. Tanks tended to form waggon-wheel harbour posns in the rain forest which involved too much mov off the tracks already cleared. On halting the best procedure was for turrets to be turned to cover all arcs and tanks remain in the mov formation.

c. Inf were frequently endangered by falling timber or the actual mov of the tanks. An inf guiding and navigation team with radio comm to the tanks was found to overcome this problem.

APCs

16. APC/inf groups were used extensively to cover clear areas of ground. APCs enabled a ready reaction force to be on standby at all times. It was found necessary to have APC/inf married up when on standby. The fire power of the APCs was very effective in the C Coy contact of 29 May.

Intelligence.

17. See Annex A.

Mission.

- 18.
- a. Phase 1 - To recce in force into the eastern sector of AO BELIZE, AO LAWSON and the western sector of AO TAUPO.
 - b. Phase 2 - To deny the en access to ground, rkt and mor attack posns for ops against LONG BINH/BIEN HOA, in AO AYRE.
 - c. Phase 3 - To recce in force in AO BONDI, with the aim of finding and denying the en rft or withdrawal routes from War Zone D to SAIGON.

Concept of Operations.

19. Phase 1 - AO BELIZE

There had been intensive activity in the North East of PHUOC TUY and the HAT DICH area by rear services elements over the two months prior to the op. It was thought that 274 Regt could be about to return to this area. The AO allotted to 1 RAR was divided into five areas and the bn was to sweep from North to South searching each area in turn, with 2 RAR on the West and 3 RAR on the East. The first area was still being searched when 1 ATF was ordered to AO COLUMBUS II.

20. Phase 2 - AO AYRE

Int reports indicated that a further VC/NVA offensive would shortly be commencing on SAIGON/BIEN HOA/LONG BINH similar to the Tet Offensive. 1 ATF was ordered to operate in AO COLUMBUS II with the aim of denying infiltration routes to the LONG BINH/BIEN HOA area to the en. 1 RAR was to operate in AO AYRE with fire sp provided from FSPB HARRISON YT 1716. Each coy was deployed to ensure that any en mov from the North and North East could be intercepted. Coy ambushes were occupied by ni while pls actively patrolled by day. As it became clear that the en was not present in str in the AO, pl ambushes were positioned by ni.

CONFIDENTIAL

4.

21. Phase 3 - AO BONDI.

It became evident that AO COLUMBUS II was not used by the en. Reports from SAIGON indicated that the offensive in that area was petering out. The en could either withdraw his damaged forces to War Zone D for regrouping or reinforce his SAIGON forces from 7 NVA Div, thought to be partly located in the East of AO SURFERS. 1 ATF was moved by air to AO SURFERS to recce in force in AO SURFERS and ambush en gps either withdrawing from SAIGON or reinforcing SAIGON. 1 RAR was allocated AO BONDI and coys were deployed into coy AOs on arrival in the area, with fire sp provided from FSPB CORAL. Coys occupied ambush posns astride tracks on their first ni in the AO (ni 12/13 May).

22. Following the bn size attack on FSPB CORAL on the ni 12/13 May, all coys were redeployed to defend the Fire Sp Base. Coys patrolled fwd by day and returned by ni to FSPB CORAL. Initially patrols were to provide security for FSPB CORAL rather than to recce in force. With the arrival of A Sqn 1 Armd Regt on 23 May, coys began recce in force ops by day, still returning to FSPB CORAL by ni. As soon as en base camps and instls were located, air strikes were called in to destroy them. Following air activity over several days, the areas were again visited by coy gps. Invariably, the en was forced to withdraw from his battered defs. Under pressure from constant ground, arty and air activity, the en appeared to withdraw completely from AO BONDI on 1 Jun. The 1 RAR Gp had successfully denied the en all routes and instls in the AO.

Execution.

23. See Annex B.

Results.

24. a. Own casualties. 16 KIA. 63 WIA.
2 x 81 mm mors damaged. 1 x M60 damaged.
- b. En casualties. 163 en KIA, 33 en KIA (poss), 3 en WIA (poss), 4 en PW, 3 detainees. Details of en eqpt captured and destroyed is detailed in Annex A.

Lessons Learned.

25. Protection. When facing NVA or main force en, it is necessary to be well dug-in in all overnight posns. Coys must halt at least three hours before last lt to ensure proper coord of all def measures. Harboursing on nightfall does not give sufficient security against main force units working in their own base areas.

26. Target/Own Forces Indication. Problems were encountered when trying to indicate our own posns to LFTs and strike ac by ni. The only satisfactory answer is for coys to each have their own electric ac beacon which can be switched on at the bottom of a rear pit. Beacons should be different colours for each coy. In addition, it is considered vital that all sects be issued with a "strobe" light to successfully indicate posns to ac at ni. As an emergency measure, large amounts of hexamine can be burned in the bottom of a pit. Torches proved ineffective. Once the ac have picked up own loc, direction of fire is easy using bearings in degrees or by compass points and distances.

27. Accurate indication of en posns by day to LFTs was also a problem. Smoke fired from the M79 provides the best solution when the target cannot be indicated by white phosphorus rounds. At present, M79 smoke is on restd issue in 1 ATF.

.../5.

CONFIDENTIAL

CONFIDENTIAL

5.

28. Arty, LFTs and Airstrikes. Light Fire Teams provide excellent close sp neutralising fire. When fire units available are limited in relation to targets called for, such as on the ni attack on FSPB CORAL on 13 May, or when fast engagement of very close targets is 30 to 50 metres is required, LFTs are invaluable. However, the fire provided is very limited in its area effects and is not continuous. To completely neutralise the en and inflict en casualties, arty and mor fire produces better results, once the en has pulled back from our posns. If a combination of air and arty fire is used, the pilots must be fully briefed prior to commencing their strikes to enable the arty check fire to be as short as possible. A careful choice of orbit areas close to likely targets and outside of areas affected by guns and mors was found to assist greatly.
29. Fire Control. Fire control at sect level is necessary to achieve results against the en engaged while on the move or against the en during def. Fast and accurate return fire always silenced the en fire power. Small arms shooting must always be directed six inches above ground level, particularly at ni when the tendency is to fire too high. In close country, bursts of fire are essential to guarantee hits against fleeting targets.
30. Inf/Tank Cooperation. While nothing essentially new was learned by coys operating with tanks and APCs in thick rain forest, navigation, harbouring, and safety of own tps proved difficult. All coys provided a navigation/control team, usually the CSM or Coy 2IC, to work with the tp leader to overcome these problems. Marrying up at all levels was again shown to be necessary and must be carried out as early as possible by stand-by sub units.
31. Control Comms. Despite the existence of the command net, admin/air net, tac air net and arty and mor nets, comm channels were fully taxed during the two ni attacks on FSPB CORAL. Whenever possible, coys should control their own air strikes or LFT strikes to assist general control from the bn CP.
32. It was again found necessary in close country to have all supporting elms and neighbouring pls on the bn comd net when a pl ptl, away from its parent coy, was in contact. All friendly forces must be fully aware at all times of the whereabouts of all neighbouring elms.
33. LZ Control. When operating by hel to a bn LZ, all coys must be briefed on coy assembly areas adjacent to the LZ and preferably have some form of marking to identify their own area. Movement from the LZ requires close bn control. Coys must have definite routes from the LZ to their AOs.
34. Dust-off. Dust-off cooperation from the RAAF was good. However, two winches from RAAF helms broke during the op, confirming that Dust-off by winch should only occur in emergency. When at all possible, coys must clear pads for Dust-off or move to a pad at a winch site with the minimum tree height.
35. Junior Leadership. The necessity for good junior leadership was obvious in all aspects of def routine and particularly weapon cleaning and hygiene.
36. General. The value of trg received in Australia prior to arrival in VIETNAM was confirmed during this op. The only new aspects were working with tanks and LFTs and control of close arty fire by ni. These aspects should be introduced and studied as techniques prior to mov from Australia.
- Conclusion.
37. 1 RAR Gp was severely tested in its first major op and proved equal to that test. While the soldiers of 1 RAR have a respect for the en, it has been shown that he can be beaten on his home ground. This knowledge together with the experience gained on the op will be of tremendous value to the Bn in the future.

.../6.

CONFIDENTIAL

CONFIDENTIAL

6.

38. The en, although skilled in recce, well organised and heavily supported, with RPG and mors, was easily repulsed in two def battles by well coordinated air mor and arty sp and by the disciplined and aggressive def conducted by the sub units involved. This result was achieved although only limited wire obstacles had been constructed due to time and avail of wire and pickets.

Annex A to
1 RAR After Action Report 2/68

INTELLIGENCE SUMMARY

Phase 1 - AO BELIZE

1. The ground in the AO was basically flat and slightly undulating with secondary jungle. The area is crossed by trail clearing, the trails run basically North-South and East-West. The trails provide a natural access route for en and friendly movement. Some tracks were discovered during operations in the area, on an East-West axis.
2. It was expected the en in the area would be rear services. It was also possible that elms of D 445 Bn could have been operating in the area. During the 3 days of operations, no idents were made.

Phase 2 - AO AYRE

3. On 5 May, operations were commenced in AO AYRE. To the South, the AO consisted of low undulating country covered with thick low scrub. To the North of this was a broad rice paddy valley. At the time of the op, it was firm and suitable for use with wheeled and tracked vehicles. However, with rain, it would become impassable. The growth in this area consisted of clumps of bamboo and along the creek banks heavy secondary growth. To the North of the AO was a hilly area covered with moderately heavy secondary growth.
4. The likely en threat was thought to be 274 VC Regt plus Engineer and Arty Bns. Their likely action was infiltration through the AO toward SAIGON or the LONG BINH, BIEN HOA complex.
5. The infiltration of the main force units did not occur during the 6 days of the operation. However A Coy did have two contacts which resulted in 4 VC dead, later identified as members of the local district VC unit, probably members of the Tax Cell. There was no identification of main force units.

Phase 3 - AO BONDI

6. On 12 May, operations were commenced in AO BONDI. Ground in the AO was generally flat and undulating, a large area of it consisted of cleared rubber. The remainder consisted of overgrown rubber and low thick scrub.
7. Anticipated en within the AO were from 7th NVA Div HQ, thought to be in the East of the AO. It was also expected to meet elms of 84A NVA Arty Regt.
8. En reaction to the presence of 1 RAR in FSPB CORAL was rapid and violent, an attack being launched at about 0245 hrs on the morning of the 13th. The main axis of the attack was on to 102 Bty and the Mor Pl. The attacking unit was identified as 2 Bn 141 Regt.
9. A second attack was launched on the morning 16 Jun at 0230 hrs. This attack was preceded by a mor and rkt bombardment. The main attack then being launched against A Coy's posn. This contact was probably carried out by two Bns with a third carrying out battlefield recovery and removing the dead and the wounded.
10. The second attack was preceded on the fifteenth by constant probing by gps of up to squad size on the posn. There is also no doubt observation of the FSPB CORAL area had been carried out on the 14 Jun.
11. Subsequently the en attempted no further ground attacks on the posn. However, the base was subject to mortaring and rocket attacks. These attacks appeared to always originate from the same areas. The probable reason being the en had surveyed in base plate posns ensuring the accuracy of his attack.
12. On the 28 May, an attack was launched against 3 RAR at BALMORAL. At the same time, CORAL received mor and rkt fire. This was to divert arty sp from BALMORAL to counter-mor fire around CORAL.

.../2.

CONFIDENTIAL

CONFIDENTIAL

-2-

13. Attacks on FSPB CORAL took the following pattern:-
- a. Interrogation of prisoners revealed that an indirect approach is used from the base area to the FUP, to defeat air observation. Local guides are used extensively - no compasses were seen on en dead following the attacks on FSPB CORAL.
 - b. Movement of large bodies of men takes place by day. When aircraft are sighted use of camouflage foliage is made. There is good cover in the area.
 - c. On arrival at the Assy Area, usually 1000 metres from the objective the attacking force digs in; usually an individual circular hole about 2 feet deep. While the sp wps crews and main body dig in, recce and guide gps finalise routes to the FUP. Telephone wire is laid between Assy Area and FUP.
 - d. Individual pits are also dug in the FUP which could be as close as 50 metres from the defence wire.
 - e. Attacks on CORAL were preceded by rocket and mortar attack. The initial fire did not exceed 5 minutes, due probably to ammunition limitations. There was a pause of 10 minutes before the ground attack was launched. The ground attack axis did not always follow natural cover; possibly the en preferred clear arcs of fire for RPGs.
 - f. Attacks on CORAL commenced between 0200 and 0300 hrs. The attack in force was broken at about 0500 hrs. However a force of up to Coy size remained to press a renewed diversionary attack at about 0545. This was to cover final battlefield clearance teams and hamper any follow-up force.
 - g. During the attack use is made of the 12.7mm HMG in the Anti Aircraft role against LFT's in the area.
 - h. Effective use is made of the RPG 2 and RPG 7 Rocket launchers at all times. They are used as a personal wpn. Ammunition is carried by the remainder of the squad. Rockets are preferred to RPDs as the major section wpn.
 - j. Once the main body breaks the attack as much produce, wounded and dead are removed and the main body disappears to prepared hides for the remainder of the day before moving out of the area completely.
 - k. On the attack of the 16th use was made of a diversion at right angles to the main axis of attack.
 - l. During the recce phase attempts are made by the en to mark machine gun pits. In this area a single stick was used. Recce of perimeter defences was effective and the main attack on the 16th was made at the junctions of coy locs.
9. All units identified were from 7 NVA Div. A number of new infiltration groups were identified. It would appear these had been used to reinforce units after losses received in other attacks. The en did not press home his infantry attacks, probably due to lack of co-ordination in his make shift units as well as friendly defensive fire.
10. Intelligence received gave no indication of the presence of 141 Regt or 165 Regt, although the presence of 7 NVA Div HQ had been mentioned.

2338 7 Pl heard noises on the wire and engaged with grenades.
- 1 Jun 68 0730-1730 B Coy carried out recce in force with 1 Tp C Sqn in area XT 9431 and XT 9531. Other coys carried out local patrolling
- 2 Jun 68 0730-1730 C Coy with 2 Tp C Sqn and 1 Tp A Sqn carried out recce in force in XT 9629. Other coys carried out local patrolling.
1200-1400 C Coy discovered, in the area of their contact of 30 May at XT 963291, 5 NVA bodies, 1 RPG 2 launcher with rocket, 1 x AK 50 and 1 x AK 47. The area had been hit heavily by air and arty and bunkers and tunnels were caved in. The M 60 lost in the 30 May contact was recovered.
- 3 Jun 68 0750-1800 1 Pl patrolled in area XT 4529. Other coys had pl size ptls out. No contacts.
- 4 Jun 68 0700-1800 Pl sized ptls operated to the North, East, South East and North West.
1130 Orders issued for abandonment of FSPB CORAL and return to NUI DAT.
- 5 Jun 68 0700-1800 Pl sized ptls operated to the North, East, South East and North West.
- 6 Jun 68 0800-1530 Air move by CH 47 of 1 RAR less B Coy to NUI DAT.
1400 B Coy escorts rear party road convoy to BEAR CAT.
- 7 Jun 68 1000 B Coy arrives at NUI DAT

CONFIDENTIAL

A COY AFTER ACTION REPORT
3 MAY - 6 JUN 68

1. Contacts. These have been covered in detail by Pl Comd reports. Additional comments are more thought provoking than adequate conclusions in text. The enemy's intelligence system appears to be vastly over-rated; e.g. the four tax collectors killed despite the fact that we had been in the area for 48 hours and has used APC's and helms extensively. The group of 13 fired upon by 2 Pl north of CORAL can be disposed of similarly. The lone courier (?) / bushwalker (?) killed by 3 Pl just south of C Coy's contact 24 hours earlier was completely off guard.

The enemy appear unwilling to press the advantage. The Coy wire was blown in 7 different spots by bangalore on 16 May but I doubt whether more than 50 broke through. About 12 bodies were recovered inside the wire. I fully expected a 'banzai' type assault - he obviously had the number available and concentrated to put this into effect.

Six lengths of old signal cable, each about 350-400 metres long were discovered during the sweep on the morning of the 16 May. They all led to the enemy's SL in front of the Coy locality. It seems that they were laid by pathfinder groups who followed our clearing patrols in and were then used as guides for the main force.

The enemy is extremely silent in digging in. His nearest pits were only 40 metres from the Coy loc but no report was received of any digging noises.

It seems that his RPG gunners are accompanied by an ammo bearer. None were found but it is significant that of the large number of RPG gunners killed and recovered, none at all carried spare rounds.

It is quite apparent that the enemy recovers the brass, even when in close contact. Not one cartridge case was located by this Coy, despite intensive searches. This is not afterthought; the point was specifically mentioned to me by OC A Coy 7 RAR.

2. Supporting Arms. Difficulty was found in guiding tanks and APC's in close country. Our solution was to use the Coy 2IC to direct them but it was not really satisfactory. More discussion and practice on this point is required. Both tanks and APC's were found to be eager to the extreme to join in the fray and pressure had to be brought upon them to stay clear until the situation became clear. The danger of having troops crushed is a very real one.

The use of tac air sp gives us a tremendous advantage over the enemy but it can become two edged. More thought must be given to the co-ordination of arty check fire and the commencement of air strike. All too often the time gap was too long, allowing the enemy to recover his casualties and break contact.

Target indication is difficult at night and discussion with gunship pilots regarding this should take high priority. Tracer was used to great effect and coloured smoke can be detected in the light of illg flares but I believe these to be makeshift only.

3. Battle Intelligence. Most of this has been covered in para 1. It is significant to note that despite his lack of radio, the enemy is highly capable of concentrating his forces in minimum time. The forces struck by A, B and D Coys on the night of 13 May 68 were obviously called in to assist in the first assault on CORAL. Fleet footed courier is the only suggestion I can make.

None of the enemy carried packs and the paucity of documents was quite noticeable.

Whilst several of his weapons were amazingly new, the vast majority were extremely old and in poor condition. Oil would seem to be at a premium and the state of cleanliness left much to be desired.

CONFIDENTIAL

2.

4. Administration. Generally, the resupply, maintenance and evacuation system ran well but the following points were noted:
- a. Errors in transcription between 92 and 98E were frequent, despite 'Read back' by 92.
 - b. The lack of variety in Aust ration packs.
 - c. The lack of daily information on the condition and location of casualties initially. This was soon corrected by the issue of a daily casualty state to all sub units.
 - d. Shortcomings in the commodity code. A recommended amendment is being prepared now.

5. Communications. These were most satisfactory. Coy HQ carried a 'squawk box' and it proved invaluable, particularly in defence. The requirement for a Bn controlled pool of spares is high. It is noted that they are unavailable at this moment but it is a pressing point. Listening posts must have a radio and the only current source at this stage is to take it from the platoon. This is not satisfactory.

Walkie-talkie down to sections are a must in defence. Valuable time is lost using runners.

6. Conclusions, Major Lessons and Recommendations.

Without being complacent, it is quite obvious that despite our shortcomings we are more than a match for the NVA soldier. Constant vigilance is essential and has been demonstrated.

Equally as important, a cut-off time must be given in the afternoon in order that adequate digging may take place.

C.J. ADAMSON Maj
OC A Coy

Appendix 1 to
Annex C to
1 RAR After Action Report 2/68

1 PL AFTER ACTION REPORT

1. Contact 1. 1100 hrs 10 May 68, Grid Reference 126217.

A voice heard cooeeing outside Coy perimeter. Investigated by 2 Sect, 1 Pl under Lcpl WHITESIDE. A wounded VC was found about 50 metres from the Coy loc. He was offered medical assistance and terms of surrender to Australians by the Sect Comd but made no reply. He was killed by an M60 burst fired from about 15 metres. (OC's comment - see contact 1 for 2 Pl).

2. Support Arms. Not employed. Contact extremely close to Coy perimeter.
3. Battle Int. Not decided in that loc. All captured items returned to BnHQ. Enemy contacted appeared to be fairly close to death from GSW but maintained a high degree of discipline.
4. Administration. Not applicable.
5. Communications. Highly important when working so close to a Coy perimeter. Use of a runner to inform all pits of the presence of sect outside the perimeter is essential.
6. Conclusions. In view of the enemy's willingness for self sacrifice, the system of offering him terms of surrender jeopardizes the section comds safety by revealing his exact location and approximate distance to him. (OC's comment - but must be done where possible).

1. Contact 2. 0510 13 May 68, Grid Reference 946305.

All the platoon had been alerted by firing at D Coy and BnHQ locations. At the time stated a group of VC, approximately 10-12 in number, were seen moving on a N-S track. VC were alerted to our presence by flare lights reflecting off hutchies and began to disperse. They were engaged by M60 (40 rounds) M79 (approx 6 grenades) and M72.

A VC was highlighted by a close flare aiming an RPG 2 at the gun pit. He was engaged by M60 fire and disintegrated under the impact of his own weapon.

A search the next morning confirmed the location of this individual by a search blast mark and shortly after a VC with leg wounds was killed approx 100 metres from the Coy perimeter.

2. Support Arms. Not employed due to ~~prox~~ proximity to Coy perimeter.
3. Battle Int. The enemy seemed to carry a very small amount of ammo, considering he was carrying an AK47.
4. Administration. Not applicable.
5. Communications. Not applicable.
6. Conclusions. All hutchies should be erected to give a flat profile.

1. Contact 3. 1210 15 May 68, Grid Reference 947297.

Five enemy were seen moving on the edge of a woodline immediately following an airstrike approximately 500 metres N of a platoon ambush loc at 946296.

The enemy dispersed, but the final trace of movement seen was engaged by M72 fire. No result was gained.

2. Support Arms. Locstat of contact was passed but am unable to say if an artillery DF was laid on a point further south.
3. Battle Int. No information gained.
4. Administration. Not applicable.

CONFIDENTIAL

.../2.

CONFIDENTIAL

2.

5. Communications. Not applicable. All comms functioned well.
6. Conclusions. Possibly advisable to plan DF's to cover routes for movement out of an airstrike loc. As the strike is planned on positive information, artillery DF's could give positive results.
1. Contact 4. 1510 16 May 68, Grid reference 943291.
Sniper fire taken off right flank pits, by the time locations of nearby patrols were established, the situation had quietened and no further activity was reported.
2. Support Arms. Not employed.
3. Battle Int. None gained.
4. Administration. Not applicable.
5. Communications. Functioned satisfactorily.
6. Conclusions. No positive lesson gained. (OC's comment. Not so. Location of friendlies was double stressed after this incident).

CONFIDENTIAL

2 PL AFTER ACTION REPORT

1. Contacts.

Contact 1. 0615 8 May 68, Grid Reference 125217.

The Coy was harboured overnight on a track running through thick jungle. MG Nos of right fwd sect heard voices coming down track. The Coy was standing to at the time, there were no clearing patrols out. The gunner was well concealed and waited until the enemy was 5 metres from him before opening up. At the same time the sect 2IC discharged two M18 mines and then followed up with 4 rounds of splintex from the M79. The left fwd gunpit opened up and the enemy was caught in a cross-fire. The enemy was not expecting us to be there as they had wpns slung, and were talking to each other.

Results. En 3 KIA (BC) 2 WIA (Blood trails)

En did not return our fire.

Captured. 1 x AK50 - 1 x Garand
1 x M1 Carbine - 1 x PPS SMC
1 x 45 Pistol - Grenades

Docs, supplies, 3 x radios, 5 x packs.

Direction of en move. W to E.

Results own. No casualties.

Each MG initiated with min of 200 rds of 7.62 link.

2 x M18 fired, 4 x M79.

Contact 2. 1615 13 May 68, Grid Reference 948292.

The platoon was in ambush posn near a track junction. There was a large clearing to our S and SE. We were facing W. Visibility to our front was clear up to 25 metres, then patchy up to 50 metres. Left fwd pit of ambush reported movement on other side of clearing to our S. Pl Sgt investigated and counted 13 (9 male and 4 poss female) well camouflaged enemy moving in treeline 70 metres on far side of clearing travelling E to W. Order was given to hold fire until enemy intentions became clear. Enemy appeared to be collecting more camouflage and seemed to be waiting for someone. All enemy were armed. Two enemy actually moved into ambush to pick up more camouflage but were not fired upon. Clearance could not be obtained for a fire mission. After about 5 mins enemy started to move away to the SW. The left fwd pit, seeing this, opened fire with 7.62mm SLR and then GPMG M60. It was thought that two enemy were wounded. Contact lasted 30 secs, enemy did not return fire. It was thought that enemy broke into 2 gps, four enemy going to SW, nine enemy going to NW (verified later). A sweep of the area was done and a pack containing rice and tobacco was found.

Results. Enemy - unknown.

Captured - 1 pack containing 5lb rice, 2lb tobacco.

Own - no casualties.

50 rounds 7.62 link and 10 rounds 7.62 Bor were fired.

Contact 3. 0340 15 May 68, Grid Reference 940293.

Right fwd MG post heard noises to their front. Two enemy stood up about 15 metres fwd right of the pit. One of the picquets discharged an M18 mine but the mine did not cover directly the area the enemy were in. It is thought one of the enemy was wounded. A sweep of the area was done at first light and 2 sets of tracks, a canteen of water and a small pack of rice were found. The pl was not fired upon. It is most likely that the enemy was probing to find out the quality and placing of our defences.

Results. Enemy - unknown.

Captured - 1 x water canteen

1 x belt

1 x pack of rice 1lb

Own - no casualties

Ammo - 1 x M18 mine fired

1 x M26 thrown

.../2.

CONFIDENTIAL

2.

Contact 4. 1045 16 May 68, Grid reference 945297.

Pl was taking part on Coy sweep. Three sects up. Soldier in centre section came upon 1 VC lying apparently asleep on ground. Soldier challenged VC who awoke and made an attempt to fire an RPG 7 lying beside him. Soldier was forced to shoot VC for self protection.

There were several shell holes in the area so it is possible that enemy had been stunned by arty explosion during the night and was still suffering after effects.

Results. Enemy - 1 VC (NVA) KIA
Captured - 1 x RPG 7, webbing
Own - no casualties
5 x 5.56 rounds fired.

Contact 5. 1500 hrs 16 May 68, Grid reference 947298.

Pl was clearing along a track with aid of sect of APCs. Formation two up, one back. Same formation for tracks, one behind each section. Scout of right fwd section spotted 2 enemy behind a large tree 20 metres to his front. Opened fire with SLR. M60 was brought up. 2 APC's also moved up to give fire support. Left fwd sect was brought up level with right fwd sect to join sweep. One M72 was fired at enemy. One enemy fled to the east. The pl moved through area, picked up one body at tree and picked up a second body 20 metres further back. No known shots were fired at pl. After re-org was complete movement was sighted ahead and on either side of the track from the pl. Fire was brought to bear but results unknown. A lead in to an enemy ambush was suspected so the pl pulled back and discontinued the task. Possum was in the air and gave invaluable assistance by telling us the actions of the VC who fled from the tree. Before he died he placed an instantaneous hand grenade beneath his wpn and one also beneath his body. This was spotted by possum.

Results. Enemy - 2 KIA (BC), one an NVA Officer.
Captured - 1 x AK47, 1 x grenade, webbing, docus
Own - No casualties
200 x 7.62 link, 50 x 7.62 Bdr, 100 x 5.56,
1 x M72, 10 x M79 were fired plus est 500 x 50 cal.

2. Supporting Arms.

Contact 1. Artillery was used on likely enemy escape routes with unknown results.

Contact 2. No clearance for Arty; friendly forces too close. APC's were later used to sweep the area but were not under control of the pl.

Contact 3. DF fired on possible enemy escape route. Results unknown.

Contact 4. No support required.

Contact 5. APC's were used in a close fire sp roll and the 50 cal MG's proved very effective in subduing the enemy. However, they seem to prevent an immediate action drill in that soldiers appear loath to move while the 50 cal's are firing. Possum was used also in this contact and proved effective in spotting enemy movement and giving directions.

3. Battle Int.

In all cases of the pl contacts, the enemy seemed sluggish in their reactions, surprised to find us in a position where we could hit them. Unwilling to return fire, and inclined to run rather than fight.

The enemy is a great digger of holes, and in most cases, will dig a new pit rather than go back into an old one. He can dig a fighting pit with OHP in a very short time (est 2-3 hrs). Generally only a spider hole.

CONFIDENTIAL

.../3.

CONFIDENTIAL

3.

The enemy goes to great lengths to camouflage himself, and in some cases I believe he thinks this makes him invulnerable and invincible. I say this because, after crawling 40 or 50 yards, he will suddenly stand up 10 yards from a pit. The enemy was also seen moving along in cover of trees and then to come out in the open and make like a tree. One group of 13 enemy sighted were actually carrying 4-5 ft trees and whenever a helicopter flew near, they would stop and hold the tree above their heads.

No enemy warning posts were discovered by the platoon.

4. Administration. Nothing to report.
5. Communications. Field telephones were used in FSPB CORAL. Several of these phones were faulty when first used and caused inconvenience for a few days. Possibly these phones were not checked before being brought on operations.

The pl had considerable use of two Walkie-Talkie radios, however, these proved more of a hindrance than an aid. Tuning was the major problem. Switches were easily knocked in the jungle causing noises that were loud and piercing. They were also used on ambush but too much noise was made speaking into them. (OC's comment - Agree to some extent but their good points are many).

6. Conclusions, Recommendations, Lessons. The enemy encountered by this platoon appeared to be well trained, however, I do not think their heart was in the job at hand, their morale appeared to be very low. They were well armed at all times and in most cases their weapons appeared to be kept clean. (OC's comment - Note conflicting comment made by OC A Coy). When forced with superior firepower, they used no immediate action drills that were noticeable except to drop their heavy equipment and run. They were experts in the field of camouflage and quiet movement at night.

I suggest that aerial photographs taken of the enemy pits in their FUP's would provide information as to their design and strength.

I also recommend that 200 rounds is the minimum a MG should initiate a contact with. (OC's comment - Coy SOP - it may be a case of overkill but certainly prevents en from recovering cas - shock effect is high).

Targets that are upwards of 50 metre distance should be treated as area targets to be fired at with M72, M79 and GPMG M60. A lesson learnt by this pl helps to substantiate this.

In contact No 2, the soldier who opened fire on the enemy had sufficient time to prepare an M72 and put the MG into position. Instead, he opened fire with an SLR but did not have enough fire power to cover the area. If he had have used the area wpns, I feel sure we would have had a positive result.

CONFIDENTIAL

3 PL AFTER ACTION REPORTS

1. Contact 1. 1840 hrs 14 May 68, Grid reference 938294.
 - a. Description. While in FSPB CORAL, 7 Sect 3 Pl was just beginning to stand to when a burst of small arms fire opened up on them. The direction of the fire was unknown and our return fire failed to produce effects. The area was engaged with M79 fire and a close DF was brought in.
Results. Friendly - 2 WIA
Enemy - unknown.
 - b. Supporting Arms. The artillery covered the suspected area and proved to be very accurate. The enemy must have fled immediately.
 - c. Battle Int. Nothing was obtained about the enemy except he will "hit and run". Also he must use camouflage extensively as the opening fire was quite close.
 - d. Administration. The only administration involved was the dust-off, which proceeded very smoothly and quickly. Shell dressing must be carried in the correct position as this saved time and caused no panic with the medic.
 - e. Communications. We had no problems.
 - f. Recommendations. Our own defensive fire must be brought to bear immediately even if no definite enemy positions have been located.
2. Contact 2. 1740 hrs 17 May 68, Grid reference 938296.
 - a. Description. Our listening post observed the movement, from east to west, of 2 VC, approximately 500 metres to their front. They engaged with the hope that the VC would take cover, thus allowing artillery to be brought down. Artillery was fired but results are unknown.
 - b. Supporting Arms. The artillery came in quite quickly and after a while, it covered the suspected area. Owing to lack of training in voice procedure, members of the listening post took considerable time in adjusting the fire of the area where movement had been seen.
 - c. Battle Int. At such a distance, no intelligence about the enemy's mission or tactics was learnt.
 - d. Administration. No admin problems arose.
 - e. Communications. Nothing to report as all went well.
 - f. Recommendations. As any soldier could have to use the radio and call in arty fire, the coys should ensure that lectures be given on the fundamentals of voice procedure and the adjustment of arty fire. The lectures should be given by experienced members.
3. Contact 3. 1530 hrs 28 May 68, Grid reference 967313.
 - a. Description. While on a Coy patrol, 3 pl was moving out into a clearing. I had deployed the sections in a semi-circular position, on the verge of the clearing and was in the process of calling fwd the tanks to secure the clearing when the VC opened fire. It was only a short automatic burst of small arms fire about 400-500 metres to our front. I had my three gunners open up and spray the general area. The tanks came forward and using their own fall of shot, I directed their fire to the general area. Artillery was then called in. Results were unknown as we did not sweep across the road for fear of it being mined.

CONFIDENTIAL

2.

b. Supporting Arms. The tanks proved to be cumbersome and almost over-ran some of my men. As there was no return of fire, it was difficult to pin point actual enemy positions for the tanks to engage.

c. Battle Int. Again no enemy were killed or sighted so nothing was learnt about them.

d. Administration. There was no admin involved.

e. Communications. The Coy net was over crowded. Only the pl in contact plus the tanks should be on the net until the initiative was regained then the Coy could be notified.
(OC's comment - The problem is noted but in this case not easy to rectify. Scrub was thick and Coy 2IC had to direct, by radio, the direction or mov of the tanks).

f. Recommendations. Tanks must be aware of every man's position and this creates a problem if they do not. (Men must move to escape being crushed, thus exposing themselves). The most successful way to get tanks firing into the correct area, is by means of having them shoot one round direct ahead and adjust their fire from there. This depends on vegetation and the location of the enemy. Tracer is not successful in daylight.

4. Contact 4. 1430 hrs 31 May 68, Grid reference 974271.

a. Description; While on a Coy patrol, my pl had discovered freshly used foot pads in grid square 9727. We had reached the end of our leg and we went into an all round defensive position on a track junction. We heard VC voices and a single VC, weaponless, came walking up the track. He was clad in shorts and boots only. When he was 15 metres away the lead corporal shot him and the gunners also added fire. I moved an extra gun forward then moved eight sections gun forward past the dead VC to cover the track while a sweep was made. Then by fire and movement I moved both guns and the search party back. I then called in artillery.

b. Supporting Arms. The arty took too long to come because of air clearances.

c. Battle Int. While near his camp this VC was over confident and unsuspecting. Also they use tracks and fail to search the scrub near the sides of the tracks.

d. Administration. Nothing to be reported.

e. Communications. No problems here.

f. Recommendations. Listening posts must be posted even in very short rests, when on a track system. (OC's comment - this is a MUST - constant vigilance by sentries will always pay off).

Tracks must be avoided. Long range patrols will find the VC relaxed and unguarded. (OC's comment - First statement is wrong. Contact will only be made by either:

(1) moving across country and "stumbling" into base camps.

(2) ambushing tracks or using them as an axis as occurred in this case.

The VC/NVA use tracks exclusively and this one of our greatest advantages over him. We are capable of moving undetected over large distances and surprising him continuously).

CONFIDENTIAL

CONFIDENTIAL

Annex D to
1 RAR After Action Report 2/68

B COY AFTER ACTION REPORT
3 MAY - 7 JUN 68

General

1. This report covers the contacts with the en at both Coy and Pl level. The reports of the Pl contacts are attached.

Contacts.

2. The Coy was involved in two contacts with the en, the relevant details follow.

Contact 1

3.
 - a. Description. On 12 May 68, B Coy were deployed by hel into the area of FSPB CORAL with the mission of securing and ambushing XT 965279 during the ni 12/13 May. Due to a delay in the airmobile phase, the Coy headed for its objective about two hrs behind schedule; and arrived in the gen area for the ni activity at 1830 hrs. Recce of the objective and the issue of orders delayed the move in a further forty-five minutes. At 1915 hrs, 4 Pl in the lead arrived in the ambush posn at the same time as a group of en of about squad str. 4 Pl opened fire with M60, no fire was returned. No further contact was made with this party. As the en were in the immediate area with the light completely faded the Coy did not dig, in an attempt to prevent undue noise. At 0410 three VC were engaged by 6 Pl and one VC was hit. At 0515 the en fired about twelve M79 rounds into the posn killing one soldier and wounding another. Arty was called in but the firing had ceased. At first lt, the Coy dug in. At 0815 hrs the en again engaged the posn with M79. This was immediately returned by the Coy using about four M79's. The en fire stopped after only one or two rounds. No further contact was made and at 0840 hrs the Coy withdrew to FSPB CORAL.
 - b. Supporting Arms. Arty was used each time the en fired though there was eventually a restriction due to the requirements at CORAL.
 - c. Lessons Learned.
 - (1) It is vital to the security of a unit that it has adequate time to deploy and prepare its posn for last lt. In this case, the Coy arrived too late.
 - (2) It is imperative to dig in even when in close proximity of the en.
 - (3) M79s should be used immediately against en light indirect wpsns e.g. 60mm mors, M79, even though arty has been called in.
 - d. Conclusion. Had the Coy stopped earlier, it would have been better prepared to ambush and withstand harrassment. Though the objective would not perhaps have been reached, alternative objectives were aval and should have been accepted by the Coy.

Contact 2

4.
 - a. Description. The Coy was ordered to escort 2 Tp C Sqn 1 Armd Regt from FSPB CORAL to FSPB BALMORAL. Due to the later requirement to fly back, the Coy was reduced to seventy which limited the str to two pls with a reduced Coy HQ. At 0745 hrs 25 May 68, the Coy moved from CORAL with the Tp tks. At 1058 hrs, the leading Pl (6 Pl) contacted two en when the forward scout fired at them as they lay in the open. The VC escaped north but were suspected of moving toward the east or left of axis. 6 Pl were ordered to secure the left flank of the axis of advance which was in jungle with 5 Pl guarding the right and rear and the tks move central. One VC attempted to close with the column from the jungle but was hit by a sect of 6 Pl who

CONFIDENTIAL

.... / 2.

CONFIDENTIAL

-2-

then attempted to clear the area but were themselves engaged by a MG firing in depth. The tks were then deployed on the WEST flank giving left flank and covering fire to 6 Pl who were ordered to secure that flank. 6Pl advanced into the jungle to within twenty metres of the en who were in bunkers. One VC was killed by the Pl and one by the tks. 6 Pl were then subjected to fire from two or more MG's firing in depth. Covered by tks firing canister 6 Pl were then withdrawn to a posn where they commanded the left flank whilst the column by passed the posn to the EAST. Subsequently the posn was subjected to an airstrike as the Coy broke contact and continued to move to FSPB BALMORAL.

b. Supporting Arms.

(1) Arty and mors were used throughout this contact. They provided effective neutralizing fire for the aslt by 6 Pl who were able to close to within twenty metres of the en. Beforehand the VC had attempted firing as soon as our tps entered into the jungle edge.

(2) The tks proved most useful and it is felt that they could have been used more boldly in their sp of 6Pl however the effect of RPG fire on the tks was not them known and as the aim was to get the tks to BALMORAL it was considered an unnecessary risk to expose them to close atk rockets.

c. Battle Intelligence. The en reacted to the presence of the Coy force with automatic AK 47 fire, RPGs, RPDs and 60mm mors. In this case the jungle was sufficiently thinned out to allow him good fields of fire. Once Arty and mors were used all en fire ceased except for some spasmodic RPD fire.

d. Communications. As a result of the requirement to reduce a Coy strength to seventy no Coy 2IC was taken. It later occurred that the OC was arranging DUSTOFF, Python, keeping Bn informed and controlling the battle at the same time. Result was that some returns (eg Noticas) were not sent on time.

e. Lessons Learned.

(1) Inf/Tk cooperation on this and later occasions difficulty was experienced in maintaining the position of tks when moving with Inf in jungle. It is necessary that they be continually guided by the tps in front of them. Hence B Coy here use the air/admin radio to switch onto the Coy net and control the tks from immediately to their front. Though the noise of tk engines has surprisingly little effect on forward scouts when mov they do cause adverse conditions for listening by the falling and crashing of timber. It was found that by moving tks in bounds of fifty metres the noise problem was overcome and control of the movement of tks improved.

(2) Comd. Due to the difficulties mentioned in sub para 4. d. above there appears a definite requirement for a battle 2IC at all times. The FO cannot be considered as on these occasions he is naturally preoccupied. During mov of inf with Tks/APCs in thick

CONFIDENTIAL

CONFIDENTIAL

-3-

country and when close to on it was found best to use the fol system.

(a) One pl clear fwd to three hundred metres from the remainder of the Coy gp. The latter would then close up with one pl in front and one in rear of the AFVs.

(b) On reaching the leading pl, which immediately mov to the next bound, the Coy gp deployed as follows:-

(i) The AFVs, usually mov in open file, stop on reaching the second pl. The first two vehs, ideally 30 metres apart, remain facing along the axis. The remaining vehs close up, and except for the rear vehs, swing their barrels to face outwards. The infantry elms then merely mov to fill the gaps between the AFVs e.g.

(c) Should the halt become protracted this gives a good basis for a harbour posn.

(d) The advantages otherwise is that it demands the least manouvering of AFVs which can take some considerable time and make much noise if attempting to adopt a more formal form e.g. Waggon Wheel.

f. Conclusion. Prior planing between Inf and Tk can overcome most difficulties. When brought to the right posn tks are a most valuable source of direct and accurate fire and handsomely complement the fire sp of Arty and mors besides being able to provide the intimate high fire sp required by inf in these circumstances.

(R. HENNESSY)

Appendix 1 to Annex D
1 RAR After Action Report 2/68

CONTACT REPORT 4 PL
GR 964279

1. Description

En forces and own tps, both in single file, broke the jungle line at a similar time and proceeded to walk on a parallel axis through a clearing, the distance between the two opposing forces was about 30 yds. The time was approx 1920 and 4 Pl as part of B Coy were moving into the ni ambush posn. The second section opened fire first - they adopted the kneeling/lying posn having carried out an immediate ambush drill. The en, who were walking in a tight gp with rifles slung, were taken completely by surprise. However, on reflex action, they dived on the ground and were hidden by waist high undergrowth. The fire fight lasted about one minute owing to the failing light, by then almost totally dark. There was no follow up.

2. Conclusion

The en were apparently unaware of our presence in the area. However, he was obviously experienced in combat as his reactions were super quick.

3. Lessons Learnt

The leading sections reactions on seeing en forces was good. Hand signals motivated an almost instant reaction and these and more were passed throughout the Pl. However, there was no fire control after the initial burst of fire because the sect comd became directly involved in the fire fight. No area wpns, M72s, 79s, 26s were used - they would, because of the situation, have done more damage to the en than SA fire.

4. Recommendation

Although not clear from the contact report, the Pl moved into an ambush posn in the same vicinity as the contact. I think, if possible, an attempt ought to be made to move out of the area by at least 300 yds and then depending on the situation decide whether or not to carry out the original task in the new loc.

CONFIDENTIAL

Appendix 2 to Annex D
1 RAR After Action Report 2/68

CONTACT REPORT 5 PL 14 MAY 68
141250H XT 947285

1. Contact

- a. Pl was harboured with sentries out.
- b. Sentry fired on approx six bearers without spns who were protected by approx four VC.
- c. Two M60s and riflemen started firing as the VC broke from single file and fled after firing several bursts from AK 47s.
- d. VC protection party tried to outflank Pl, however, they were caught in a crossfire from M60 and M79s.
- e. Arty was brought down after which a search of the area was carried out.
- f. Results: 25 lb rice, cigarettes, bag of thongs. Marks indicating 2 VC suspected WIA (One of these confirmed in later contact and killed)

2. Sp Arms

Use of Arty - Arty rep handled, no problems. Must brief arty reps exactly where rounds must fall and where to correct to, depending on en mov.

3. En Tactics

En completely surprised. Tried to outflank Pl, however was stopped by M60 and M79 fire.

4. Resup NTR.

5. Comms.

Handset failed during contact - made use of arty net which relayed to Coy CP.

6. Lessons

- a. Sentries should carry automatic wpn and M79.
- b. Sentries must be dug in and well camouflaged.
- c. Flanks must be well protected - claymores were used and had on found our flanks these would have been of great use. Applies to flank protection during sweep after contact.

Contact report regarding VC ambushing SPI is missing!

Results 4 NVA KIA

1 Aust KIA 1 Aust WIA.

141730

XT 945288

CONFIDENTIAL

CONFIDENTIAL

CONTACT REPORT 5 PL 16 MAY 68
160830H XT 943293

1. Contact

- a. Pl engaged in sweep to look for dead VC after attack on 'CORAL'.
- b. M60 gp came across six supposedly dead VC.
- c. While deploying one of the VC, clutching a loaded RPG 2, moved.
- d. The M60 fired two short bursts into the body and the area was then cleared.
- e. Results 1 VC KIA (BC).

2. Sp Arms

No use of Sp Arms.

3. En Tactics.

En previously wounded and rather than surrender he tried to fight. Probably drugged as there were empty drug phails in the vicinity.

4. Admin. NTR

5. Comms. No problems.

6. Lesson

- a. Never take anything for granted or ~~being~~ certain when dealing with this en.
- b. Gun gp must be placed such that he able to take action instantly and all members of the gp are not looking at the same area.

CONFIDENTIAL

CONFIDENTIAL

CONTACT REPORT 5 PL 17 MAY 68
171717H XT 937284

1. Contact.

- a. Pl moving back from ptl and nearing FSPB CORAL.
- b. Rifleman noticed a green shirt on the ground in thick grass.
- c. Rifleman covered area and called gun group fwd.
- d. Gun gp noticed movt in the grass and fired in the area.
- e. A search of the area was then made.
- f. Results: 1 VC KIA (BC) - no wpn. VC previously wounded.

2. Sp Arms. No sp arms used.

3. Battle Int. NTR.

4. Admin NTR.

5. Comms. No problem.

6. Lessons.

- a. **Don't relax when nearing base etc, returning from the ptls is probably the most dangerous part of a ptl.**
- b. Even though no actual sighting of the en was made until he was dead it must be noted that anything suspicious should have fire brought to bear on it in certain circumstances.
- c. Due to the proximity of a standing patrol, the Coy CP tried to halt the firing. A general direction of the firing by the Ptl, given to Coy would have negated this command.

CONFIDENTIAL

CONFIDENTIAL

Appendix 3 to Annex D
1 RAR After Action Report 2/68

AFTER ACTION REPORT 6 PL

Contact at Grid reference 932312 at 1058 hrs. Duration of contact 122 min.

1. Description.

- a. Task - escort Tp tks North to 3 RAR at BALMORAL from CORAL FIRE SP BASE.
- b. Fwd Sect (8 sect) (mov one up) contacted two en (dressed in greens and hats with cam on their hats and rifles) at 5 yds distance with a burst from his M16, going to ground and returning fire as the en withdrew North. Mors were called in due North to cut them off. Pl re orged with no further incident. Coy moved up and began Coy re-org.
- c. 9 Sect, left flank sect Pl reorg fired on an en with AK 50 as he approached their posn (possibly checking on what was going on) and the sect received return fire. A sect sweep went in to clear the one en seen wounded - That sect then was fired on by LMG from 30 metres and one own wounded received as sect was pulled back.
- d. A Pl sweep was ordered with tk fire sp from two sects and Pl HQ moved within 20 metres of some pits from which LMG fire was received One en was shot (had been wounded before) and 1 AK 50 CIA - Pl was withdrawn and heavy Arty sp called in. Coy then had Dust-off for 1 WIA and moved out further North while A/S was called in.

2. Lessons Learnt.

Within the Pl when sweeping an en contact area when going is heavy, gun gps (with two sects up) are better controlled when closer to Pl Comd since noise drowns out orders to and from the flanks. Tks could have been manouvered to move on our flanks or in the centre for better fire control.

CONFIDENTIAL

C COY AFTER ACTION REPORT

1. C Coy 1 RAR was involved in the following contacts:

a. 14 May 68. At 942300 at 1700 hrs, 7 Pl contacted 9 VC who were fleeing westwards after contact with 'friendlies'. Result 7 VC KIA 2 VC POW. Own casualties 1 KIA, 2 WIA. In the middle of the contact the Pl was ordered to change frequencies to allow direct contact with Possum aircraft and APC's. Although necessary in this case, it was an additional difficulty to contend with. Subsequent patrols were better briefed. However where patrols are deployed in relatively close proximity it is considered desirable that they be controlled on the Bn Comd Net.

b. 16 May 68.

(1) At 0300 hrs during the attack on FSPB CORAL, a small group of enemy were engaged 15 metres from the Coy perimeter. Result 5 enemy KIA. This was probably designed to be a small, diversionary attack, as weapons recovered were 1 Bangalore torpedo, 1 RPG 2 plus rockets, 1 RPD and 3 AK47's. Little wire had been laid in front of the coy perimeter and there was no wire at the point of contact. The enemy were obviously unaware of the Coy locality which was in rubber and not observed easily by day. The lack of wire in this, by not marking the coy perimeter, was instrumental in achieving this result. Wire in many cases was too far forward of coy perimeters.

(2) A Coy sweep supported by APC's resulted in one enemy POW and one AK47. This POW may have been part of the group contacted as per b.(1). The necessity for tps to be alert, inquisitive and search thoroughly was brought out in this incident. Although the soldiers were moving only approx 15 metres apart, they failed to detect the enemy until he gave himself away by looking up when an APC approached very close to his position.

c. 27 May 68.

(1) At 1015 hrs at 968296, 9 Pl came under fire from an enemy standing patrol dug in posn. The en posn was located in the edge of a timber line overlooking a main track and an open area. Some difficulty was initially experienced by 9 Pl in returning fire as they were unsure of the location of 7 Pl, who had previously crossed the open area and were securing the same timber line.

The enemy (approx 12) withdrew when engaged with M60 and M79. No casualties were sustained and the coy deployed in a hasty defensive posn in the en loc. Following clearing ptls, 8 Pl were given a task to search due east for approx 300 metres. Shortly after their departure, the Coy was alerted by 9 Pl sentries, who sighted five enemy dressed in camouflage suits. The enemy split up and started firing into the coy posn.

An attempt by 9 Pl to clear in front of their loc met with RPG and RPD fire. The enemy were then engaged by arty and mor fire and a light fire team. 8 Pl then completed the task by sweeping back across the 9 Pl perimeter. Result 2 WIA 1 en KIA. Further weapon pits were discovered and it would appear that the coy had struck the outer defences of a larger en posn. Evac of three of the cas was effected whilst 8 Pl was clearing the southern perimeter and the light fire team covered the exposed western flank of the LP. A demolition of 2 RPG rockets which failed to detonate was not re-investigated as enemy were still suspected to be in the area and there was insufficient time to get further involved in contacts. The Coy then withdrew to RV with APC's. Arty and mor fire was called in on the en posn.

.../2.

CONFIDENTIAL

2.

(2) Major Points.

(a) The initial coy obstacle crossing could have been handled better. In retrospect, the enemy in the general area appeared to sight positions overlooking major clearings and tracks.

(b) Reorganising in an enemy position has inherent dangers, however, it was done to get the coy into a secure posn and allow further searching of the area. It was apparent that the en was prep to harrass and re-occupy his dug in posns. Our requirement is to clear to greater depth ASP, maintain max security and to dig in.

(c) Evac of wounded was successfully carried out with the cooperation of the Dustoff helicopter.

(d) 30 May 68.

i. Coy task - recce in strength. At 0840 hrs at 963290 shortly after debussing from APC's, the lead Pl (9 Pl) was engaged by a dug in en force firing RPG's and RPD's. To relieve pressure on 9 Pl, 7 Pl was ordered to move round the left flank and clear in front of 9 Pl. In attempting this, 7 Pl was heavily engaged by other en also dug in. Both Pls were receiving fire from the front and their flanks. 8 Pl was then moved fwd to link with 7 Pl, Coy HQ and 9 Pl in an attempt to get all round def. Arty and mors were used but were not particularly effective at this stage, as the range of contacts was as close as 10-15 metres. En mors started firing into the fwd edge of the area of contact but caused no casualties and were quickly silenced by our own counter mor and arty fire. The en continued to attempt to probe or harrass round the flanks for the duration of the contact. Mor, arty and a light fire team gave good support on the flanks and in depth behind the main contact. With the arrival of a tp of tanks and a tp of APC's, the coy was able to regain the initiative. The tanks destroyed 8 en posns in 7 Pl's area of contact whilst the APC's gave effective fire sp to the flanks and fwd, and assisted in extricating the wounded.

At approx 1155 hrs the coy broke contact under covering fire of tanks, APC's, mor and arty and withdrew approx 500 metres. Further arty and air strikes were directed onto the posn including one by POSSUM who reported sighting 13 en moving away from the area of contact. On 2 Jun, the coy moved back to the area of contact. The en posn was designed for at least a coy and included bunkers, tunnels, zig zag communication trenches to standing patrol posns on all four corners of the main posn.

(3) Major Points.

(a) Tanks and APC's proved particularly effective in giving close direct fire sp in what was thick scrubby country. Using the coy net the tanks were directed fwd by 8 Pl and 7 Pl comds to where they were required. RPG's appeared to bounce off the tanks. One APC took one RPG rocket but no major damage was involved. RPG's appeared ineffective because of poor fields of fire. RPG's against infantry in close country, aprat from the initial shock effect, also proved ineffective.

.../3.

CONFIDENTIAL

CONFIDENTIAL

3.

(b) Marking of targets in close country for light fire teams proved difficult. Initially, coloured smoke was used but the thrower was fired on with an RPG. To move the fire to the other flank a 'bold' correction of 400 metres was given. This was obviously not specific enough and resulted in 2 own troops WIA (remaining on duty). One solution is to use the M79 firing a smoke round. This used to be known as a 'practice' round, is available to SAS, but apparently not available to this unit.

2. Employment of Supporting Arms.

a. Tanks and APC's provided excellent offensive direct fire support in close country.

b. APC's tend to halt too close together when embussing or debussing troops. By so doing we present excellent targets to the enemy. If APC's break down troops should be debussed and deployed ASP.

c. Existing communications for infantry when mounted on APC's are inadequate due to lack of, or poor equipment.

d. As previously mentioned an alternative to hand thrown smoke grenades is required to mark locations for light fire teams. Suggest M79 firing smoke.

3. Battle Int.

a. En made good use of communication trenches for alternative fire posns. En posns appeared to overlook tracks and clearings, were well camouflaged from the air (incl tracks), were dug in with overhead protection and had communication trenches linking main posn and standing patrol posns.

b. En appeared prepared to probe and harrass round flanks and maintain contact. Two main contacts lasted 4-5 hours.

c. En RPG fire used freely certainly produced a shock effect but was ineffective in causing casualties.

4. Administration.

APC's proved quick and effective in casualty evacuation. In a heavy contact and in close country, evac by DUSTOFF can be extremely difficult and long.

5. Communications.

Only major comms breakdown occurred on coy net. This is attributable to operators not being able to hear over heavy volume of fire.

1 RAR After Action Report 2/68

D COY AFTER ACTION -REPORT
OPERATION 3 MAY - 6 JUN 68

General

1. The following after action report covers the period of operations 3 May - 6 Jun 68 as follows:
 - a. Operations in AO BELIZE 3 - 5 May 68.
 - b. Operations from FSPB HARRISON 5 - 12 May 68.
 - c. Operations from FSPB CORAL 12 May - 6 Jun 68.

Contacts and Incidents.

2. a. AO BELIZE 3 - 5 May 68.

(1) 041141H - Grid Reference 341883.

Fwd scout of 11 Pl sighted fleeting glimpse of one en moving EAST to WEST. Dressed in light brown or khaki. Engaged at 35 metres. Nil results.

Comment: Rapid and aggressive deployment failed to kill en. Pleasing aspect was positive but economical con of fire by sect cmd.

(2) 041156H - Grid Reference 344874.

Lead sect of 10 Pl engaged one en in thick primary jungle at 30 metres. Quick follow up failed to reveal any trace.

Comment: Again good fire con. Minimum of ammo used and highest bullet mark on trees was 2'6" above ground.

(3) 041228H - Grid Reference 350876.

Fwd scout 12 Pl sighted two en. Engaged en who returned two shots. Pl swept area and was fired on. Nil results.

Comment: Con of fire not good; too much ammo expended.

- b. FSPB HARRISON 5 - 12 May 68.

(1) 081030H - Grid Reference 177166.

12 Pl investigated old allied def posn. Area in filthy state with litter, eqpt, ammo and docus in area.

(2) 081200H - Grid Reference 177162.

12 Pl loc old destroyed en coy size def posn. Well constructed, camouflaged, overhead cover, crawl trenches and well def. Evidence of 122mm rkts in area.

Comment: Contrast between allied and VC posn most marked. Believe area NOT used since Op COBURG.

- c. FSPB CORAL 12 May - 6 Jun 68.

(1) 121800H - Grid Reference 939309.

Lead sect 12 Pl sighted 10 en on side of track at 25 metre range. Fired, killing one en, remainder returned SA fire incl RPG 2, then withdrew leaving 1 x AK 47 and webbing. Arty fire was brought to bear on withdrawal route at 600 metres range.

.../2.

CONFIDENTIAL

CONFIDENTIAL

2.

One own tps wounded in head by arty shrapnel whilst in prone posn. En identified as NVA. One VC sighted wearing black uniform.

Comment: The en did not fire until we opened contact. Possibly confused by our uniform and head gear. The gp appeared to be using a local VC as a guide.

(2) 130225H - Grid Reference 939309.

Three en walked in front of 11 Pl in ambush. 12 Pl fired killing one en dressed in black and capturing one AK 47. The en withdrew and immediately from their rear, 3 x RPG 7 rkts were fired into 11 Pl posn killing one and wounding 11 own tps. 12 Pl reported a large gp of en of unknown size were to the rear of the "scout" gp. The cas were successfully evac by "Dustoff".

Comment: En were using local guide to lead them towards FSPB CORAL. Scout gp used by en.

(3) 130545H - Grid Reference 939309.

Six en passed 40 metres in front of 12 Pl moving WEST to EAST. Engaged by rfn killing one NVA capturing 1 x AK 47 and 1 x RPD MG and small amount of Cambodian money.

Comment: En were returning along same route after withdrawing from FSPB CORAL.

(4) 130924H - Grid Reference 939310.

12 Pl sighted 5 en moving across their front at 200 metre range. 12 Pl engaged the en who went to ground in bunkers. 12 Pl moved to intercept the en and came under automatic SA fire. Coy attack with LFT and arty sp cleared the area with 3 NVA KIA, numerous blood trails left and capturing 3 x AK 47 docus and grenades. Posn was capable of holding pl size force. En were not prep to surrender.

Comment: LFT provided only neutralizing fire and was not as effective as expected.

(5) 141200H - Grid Reference 924307.

12 Pl ambushed by 3 en who opened engagement with RPG 2. Pl was backtracking along own track to take up ambush posn. One own tps KIA, 4 WIA. Cas eventually evac after difficulty experienced with Dustoff winch.

Comment: Old lesson unfortunately relearnt. Laying of immediate ambush rear when on move could well pay results.

(6) 141400H - Grid Reference 923297.

10 Pl discovered camp complex along creek.

(7) 141750H - Grid Reference 923297.

Sect of 11 Pl sighted 2 local VC wearing black. Fired at 30 metres with nil result.

(8) 160240H - Grid Reference 930294.

En RPG, mor and SA fire despite tree bursts, only one soldier was slightly wounded. All pers were in fighting pits which gave adequate if not complete cover. M72 proved to be very effective against en MG and rkt posns.

.../3.

CONFIDENTIAL

CONFIDENTIAL

3.

(9) 230945H - Grid Reference 927301.

One en dressed in green appeared out of bushes alongside track. Machine gunner fired from the waist posn with nil results.

(10) 261227H - Grid Reference 940312.

Coy was conducting recce in force in thick primary jungle sp by one tp of tks. Leading sect of 10 Pl sighted and killed one NVA walking along path near bunker complex. En immediately returned SA and RPG fire from concealed bunker system at 25 metre range. Tanks were called fwd and proceeded to clear area with consistent APC BC and MG fire. One tank received 3 x RPG 2 direct hits with no noticeable effect on the tanks. A total of 14 bunkers were destroyed and 7 NVA bodies counted. Six bunkers were not searched due to lack of time and they were either burning from the flame throwers or had been crushed in by the tanks. The coy withdrew still in contact under the cover of accurate and close arty and mor fire. There were no cas own tps.

Comment: The armd sp was of great value and no doubt saved cas amongst own tps. They are an excellent wpn against bunkers and the en is apparently not yet familiar with our Inf/Armd tactics. Our tps were more than favourably impressed with the tanks. The flame thrower proved to be an excellent wpn to assist in the destruction of a bunker.

En Tactics.

3. a. Contact Drills.

The en initiates many contacts and ambushes with RPG 2 fire achieving considerable shock effect. Even in the open and against tanks, they fire high, possibly to achieve airburst effect or to neutralize the crew cmd.

Comment: The use of the M72 in a similar or counter role has proved to be highly effective. An M72 is carried by the second scout as an auxiliary wpn.

b. Follow up Tactics.

The en does follow up our ptls and ambushes our trails.

Comment: (1) Immediate ambush rear may achieve results.

(2) The "book" is right.

(3) They also follow their own trails.

c. "Close Hug" Tactics.

They lie up close to FEBA in dead ground between grenade and mor/arty range.

d. Def Layout.

Their bunker systems are well sited with one bunker covered by two which in turn are covered by three or four. The bunkers are solidly constructed, well camouflaged, clean and concealed, often with escape tunnels at the rear. Their toilets are well constructed and are often outside the perimeter, giving early wng of their presence.

Comment: (1) They must have read Inf Trg Vol IV!!

(2) It's easy to be "sucked" in and to be suddenly engaged from the flanks as well as the front.

.../4.

CONFIDENTIAL

(3) What do they do with their spoil?

e. Ambush Sites.

A number of ambush sites were discovered astride tracks. The majority of pits were sited close to the track on both sides to cover the most likely approach. There was surprisingly little obvious flank or rear protection.

f. Claymores.

A number of claymores were turned around or had wires cut. The problem was overcome by burying the cables, camouflaging the mine and by shouting "Claymore" when firing, whereupon all heads were lowered below the parapet. In addition, white tape shows up effectively on a starlight scope and indicates if a mine has been turned.

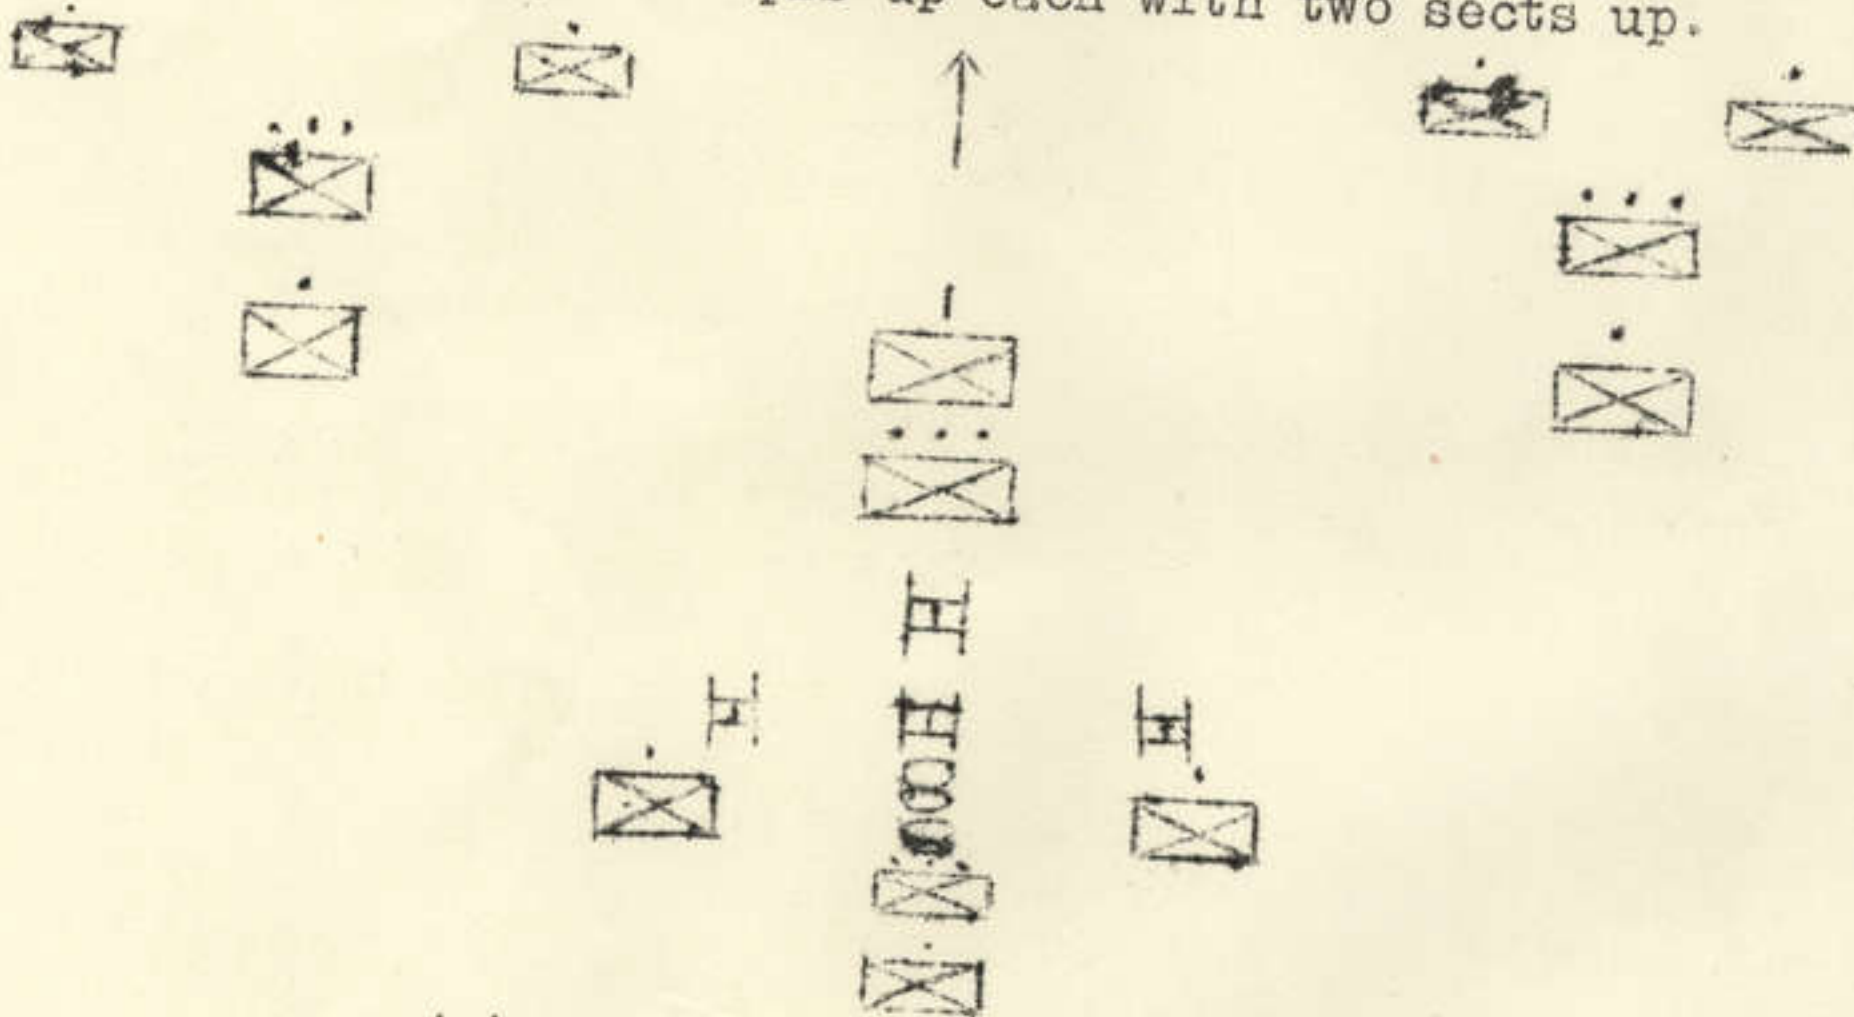

Employment of Sp Arms

4. a. Inf/Tk Cooperation in Jungle.

(1) Navigation: No real problem but tank compass similar to ac compass would assist in maintaining direction. The tp comd kept fmn with rear of sp sect. Change of direction imposes a delay while the tks manouvre.

(2) Fmn: The tks moved in rear of Coy HQ and sp sect, thereby leaving the fwd Pl free to search the ground. The two types of fmn successfully employed are shown below.

(a) Two pls up each with two sects up.

(b) Two pls up each with one sect up.

(3) Control. No difficulties were experienced. All tks were on the coy internal net using their B 47 radio. The tp comd normally only came on the air with the remainder on listening watch. With the good comms, there was no requirement for a tk LO with the coy comd. No control difficulties were experienced when the tks moved fwd and pl comd spoke direct to the tk concerned.

CONFIDENTIAL

5.

(4) Tgt indication: The Pl Comd or Sgt talked the tk onto the tgt or used an M79 to mark. Often the crew comd could see the tgt before the ground tps. The "reference your barrel" was the most frequent method used. No problem was encountered in describing the fwd line of own tps.

(5) Use of Tks against Bunkers. Once the initial contact was made, the tks immediately moved fwd and once clear of own tps, they cleared the way ahead with canister, APC BC and MG fire. The tks keep moving fwd blasting with canister and the Infantry follow up clearing any uncrushed bunkers with grenades and flame throwers, canister and the mere presence of this had a devastating effect on the en. Canister cleared the front and we ensured flank and rear protection was maintained. The tks gave excellent protection to the infantry against SA fire.

(6) Noise. The noise level was very low and even when the tks were as close as 25 metres, it was exceedingly difficult to ascertain their posn, how many there were and which way they were travelling. The fwd scouts did not consider the noise to be a problem. The problem lay in keeping the crews quiet in a def/harbour posn.

(7) Comm. No difficulties were encountered provided radio op remembered to keep the AN PRC 25 set function on "ON" and not on "squellch". The tks were used on a number of occasions to relay msg to sect. The tk telephone was not used at any stage. Fd sig were also effective particularly to the drivers.

(8) Admin. The tks were a valuable source of additional water and they carried reserve ammo and eqpt.

(9) Marrying up/Prop. Essential but facilitated by route recce by air and joint planning.

b. Light Fire Team.

A light fire team was used in conjunction with a coy atk. The fire was purely suppressive but effectively neutralizing. The MFC was used to con the team while the FO con the arty/mor fire. Satisfactory identification of own tps was achieved by use of smoke.

Battle Int.

5.

a. Routine.

The en apparently spends most of his time in a def posn in his bunker either building/improving or sleeping by day. They maintain maximum silence by day and apparently cook their meals the ni before it is consumed. Activity appears to commence at about 1630 hrs onwards.

b. Listening Posts/Early Wng.

It appears that a major complex has listening posts of up to squad str loc at a number of pts 1500 - 2000 metres out. The squad appears to have its own listening post a further 30-50 metres and on the most likely approach.

c. Markers.

(1) GPMG. Our own pits were marked on two occasions. Both times the markers were approx 100 metres out. The first marker was a 2'6" stake upright in the ground directly in front of the GPMG. The second marker was two parallel sticks 18" long placed lying on the ground pointing towards the gun.

.../6.

CONFIDENTIAL

CONFIDENTIAL

6.

(2) Mines. They appeared to indicate their own mines by breaking three shrubs, saplings or small branches and having the three broken ends converging towards the mine.

(3) Wng shots. Three shots fired at a regular pattern appear to have some wng significance.

Additional Lessons Relearnt.

6. a. Tracer.

(1) A double edged wpn. The tracer was removed from belts used on tripod mounted GPMG on fixed lines to facilitate concealment.

(2) Loading tracer as the second last round in both SLR and M16 magazines proved to be a sound practice to indicate expenditure.

b. GPMG.

The continual cleaning of GPMG and spit polishing of link ammo coupled with crew cooperation resulted in a far less number of stoppages.

c. M79.

The M79 loaded with canister round is very effective at short ranges (less than 25 metres) in thick country.

d. Navigation.

(1) Accurate pacing plus correct compass bearings coupled with Data sheets equates to accurate and precise navigation verified by marked arty msns.

(2) Checking the loc of LZ on final approach is recommended.

Major Weaknesses.

7. a. Def Routine.

P1 and Sect comds needed to be reminded of the detailed routine and conduct of the formal def.

b. Fire Control.

Using too much ammo and not using fire to best effect. Keeping the M16 change lever off "automatic" assists.
