## Instructions:

- Before adding the glass media into the filter tank, conduct a visual check of the laterals to ensure they have been connected properly and are secured.
- Check for any damaged or loose laterals and correct or replace accordingly.
- To eliminate any tension on the laterals when adding the media, half fill the filter tank with water to provide a cushioning effect when the filter media is poured into the tank.
- Ensure the correct amount of glass media is added to the filter tank.
