About the Data Supplement

The FY2021 Sustainability Data Supplement (‘the Data Supplement’) includes detailed information to support the disclosures made in our FY2021 Sustainability Report (our sixth annual Sustainability Report, ‘the Report’) and our first Climate Action Report, released in September 2021.

Information presented in the Data Supplement pertains to the sustainability performance of the consolidated entity (‘BlueScope’ or ‘the Group’), consisting of BlueScope Steel Limited (‘the Company’) and its controlled entities for the year ended 30 June 2021.

Unless otherwise stated, environmental data is reported utilising an equity share approach, production and safety metrics reported on a financial control basis and people data is reported on a head count basis. All financial information is reported in Australian Dollars unless otherwise stated.

BlueScope endeavours to ensure the data in the FY2021 Sustainability Reporting suite and the Supplement is as accurate and up to date as possible to enable stakeholders to understand our performance and compare it to prior periods. Where appropriate, historical data has been restated to present data on a consistent and comparable basis and an explanation is provided. We have not sought external assurance over disclosures in this Report.

Our FY2021 Sustainability Reporting suite is available on our website.

The Report has been prepared in accordance with the Global Reporting Initiative (GRI) Standards at a Core level. We provide climate-related disclosures in alignment with the Recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). We have also identified our reporting metrics that are consistent with the Sustainability Accounting Standards Board (SASB) Industry Standard for Iron and Steel Producers and the UN Sustainable Development Goals.

The following page outlines how our sustainability outcomes and material topics (defined on page 15 of the Report) are aligned to the disclosure frameworks described above.
## Our sustainability outcomes, topics and disclosure frameworks

<table>
<thead>
<tr>

### TOPIC CATEGORIES

- **Material**
  Identified as most material by internal and external stakeholders, significantly impacts the environment, society or economy, reflects our business priorities and critical aspects of our sustainability performance. We have reported our performance for these topics against an applicable GRI Standard.

- **Important and emerging**
  Identified frequently by either internal or external stakeholders or have a localised impact on the environment, society or economy. We have disclosed our management approach and selected performance data for these topics.

**Other**

Identified infrequently by either internal or external stakeholders or have a potential/declining impact on the environment, society or economy. We have not specifically addressed these topics in this Report.
Stakeholder engagement

BlueScope works hard to develop and maintain relationships with the principal stakeholders identified in Our Bond: our customers, our shareholders, our people and our communities. In addition, government and regulatory bodies, suppliers, and joint venture partners have an interest in the performance of our business. Our websites provide stakeholders with a wealth of information relating to all aspects of our business. The primary interests of each stakeholder group were identified through our materiality process and discussions with the BlueScope personnel who engage regularly with them. In the table below, we have identified stakeholder interests and the methods through which we engage with them.

<table>
<thead>
<tr>
<th>Stakeholder</th>
<th>Interests</th>
<th>Principal engagement methods</th>

<td></td>
</tr>
<tr>
<td>Steel manufacturing fresh water intensity</td>
<td>1.48</td>
<td>1.33</td>
<td>1.32</td>
<td>Continued improvement in fresh water intensity since FY2018. Historical data restated to ensure consistent application of steelmaking intensity boundaries following the creation of our 2030 non-steelmaking emissions intensity reduction targets.</td>
</tr>
</tbody>
</table>

1 The FY2018 Scope 2 GHG emissions figure noted in our Climate Action Report published on 1 September 2021 was incorrectly transcribed. The Sustainability Report and Sustainability Data Supplement include the corrected data.

2 Our ability to achieve net zero GHG emissions by 2050 will be highly dependent on five key enablers, refer to Glossary for further details.

BlueScope supports the United Nations (UN) Sustainable Development Goals (SDGs), a call for global action that aligns with our efforts to drive sustainable business outcomes. Throughout our FY2021 Sustainability Reporting suite we provide many examples of how our business and our people contribute to the achievement of the SDGs, with some key highlights detailed in the table below.

<table>
<thead>
<tr>
<th>Goal</th>
<th>How we contributed in FY2021</th>
<th>Reference</th>
</tr>
</thead>
</table>
| 3: GOOD HEALTH AND WELL-BEING | » Continued focus on maintaining COVID-safe workplaces and supporting our teams.  
» Over 1000 BlueScope leaders globally, including our Board and ELT, participated in expert-led HSE leadership workshops.  
» Began integrating our new HSE human-centred approach across all business units, including Learning Teams and our “Better Questions, Stronger Solutions” initiative.  
» Over 400 HSE risk control improvement projects completed globally.  
» Transitioned to balanced health and safety reporting indicators for strengthened capability, risk management and severity. | FY2021 Sustainability Report  
» Page 23; Safety, health and wellbeing |
| 5: GENDER EQUALITY | » Maintained our gender balance ratio for our Board and ELT above our 40 per cent target.  
» Became a signatory to 40:40 Vision, an investor-led gender initiative, targeting 40 per cent representation of male and females at the Board and Executive Leadership Teams. BlueScope have also extended this target to its broader executive category.  
» Continued increase in gender balance across all categories.  
» Integrated Inclusion and Diversity in business activities and defined Inclusive Culture focus areas. | FY2021 Sustainability Report  
» Page 28; Culture and capability |
| 6: CLEAN WATER AND SANITATION | » BlueScope’s total water consumption increased by 6 per cent in FY2021. All of the net increase in total water consumption since FY2019 came from recycled water sources.  
» Recycled water consumption doubled since FY2018, driven mostly by our Port Kembla Steelworks. 39 per cent of BlueScope’s total water consumption from external sources now being supplied from recycled water sources.  
» BlueScope further reduced the fresh water intensity at steelmaking facilities to 1.32 kL/tonne of raw steel, down from 1.33 in FY2020.  
» Water-related impacts considered in BlueScope’s strategic climate change activities including scenario analysis and physical risk assessment. | FY2021 Sustainability Report  
» Page 39; Water stewardship |
## Goal

<table>
<thead>
<tr>
<th>How we contributed in FY2021</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>» Reduced our steelmaking GHG emissions intensity by 1.8 per cent against our FY2018 base year. Over the same period, GHG emissions intensity across our midstream non-steelmaking sites has reduced by 6.3 per cent.(^2)</td>
<td>Climate Action Report FY2021 Sustainability Report » Page 35; Climate change and energy</td>
</tr>
<tr>
<td>» We have realised more than 25,000 tCO(_2)-e per year in GHG emissions reductions through energy efficiency and climate-related projects, avoiding more than 14,000 MWh per year in purchased electricity, around 58,000 GJ per year of natural gas and around 41,000 litres of diesel.</td>
<td></td>
</tr>
<tr>
<td>» Three-year average ROIC of 17.3 per cent and cash flow of $813M.</td>
<td>FY2021 Sustainability Report » Page 17; Business strength and resilience</td>
</tr>
<tr>
<td>» Initial five-year climate investment program of up to $150M.</td>
<td>» Page 28; Culture and capability</td>
</tr>
<tr>
<td>» Strong balance sheet with $798M net cash at 30 June 2021.</td>
<td>» Page 43; Supply chain sustainability</td>
</tr>
<tr>
<td>» Increased annual dividend level, targeting 50 cents per share per annum.(^3)</td>
<td>» Page 60; Economic contribution</td>
</tr>
<tr>
<td>» Announced buy-back of up to $500M.</td>
<td></td>
</tr>
<tr>
<td>» North Star expansion progressing well under COVID safe conditions.</td>
<td></td>
</tr>
<tr>
<td>» Globally launched Our Purpose and our updated Our Code of Conduct, How We Work.</td>
<td></td>
</tr>
<tr>
<td>» Exceeded our target to complete 220 Priority supplier assessments by 30 June 2021.</td>
<td></td>
</tr>
<tr>
<td>» Increasing use of third party onsite assessments. Seven assessments completed in FY2021, expanding to 15 per cent of Priority suppliers over the next two years.</td>
<td></td>
</tr>
<tr>
<td>» Refreshed supplier segmentation model includes over 1000 suppliers (90 per cent of spend by Business Unit, up from 80 per cent previously).</td>
<td></td>
</tr>
<tr>
<td>» $730M tax payments contributed globally, $238M of which is directly borne.</td>
<td></td>
</tr>
<tr>
<td>» $12.9 billion of direct economic value generated, with almost 90 per cent contributed back to our communities through payments to suppliers, employees, governments and other stakeholders.</td>
<td></td>
</tr>
<tr>
<td>» Delivered digital and manufacturing excellence projects to create productivity improvements and reduce product loss.</td>
<td>FY2021 Sustainability Report » Page 20; Transformation</td>
</tr>
<tr>
<td>» Developed new methods to identify, track and share projects that deliver productivity improvements.</td>
<td>» Page 50; Sustainable products</td>
</tr>
<tr>
<td>» Expanded our digital capabilities to deliver our strategic ambitions.</td>
<td></td>
</tr>
<tr>
<td>» In Australia, BlueScope is a Founding Partner of the Materials and Embodied Carbon Leaders Alliance (MECLA) and the Australian Building 4.0 CRC.</td>
<td></td>
</tr>
</tbody>
</table>

\(^2\) Tata BlueScope Steel's Jamshedpur site has not been included in the reported data for this metric.

\(^3\) This will be subject to the Company's financial performance, business conditions, growth opportunities, capex and working capital requirements and the Board's determination at the relevant time.
Goal | How we contributed in FY2021 | Reference
---|---|---
12 Responsible Construction and Innovation | BlueScope products and solutions are well positioned to respond to key macro trends that are driving building and construction to higher quality, light weight sustainable products. | FY2021 Sustainability Report » Page 50; Sustainable products » Page 49; Environmental management
 | BlueScope advanced coating technologies and rigorous testing regime continue to extend useful product life across a range of products. | 
 | Continued commitment to supporting customers and transparency of BlueScope sustainability credentials via Environmental Product Declarations and ecolabels. | 
 | BlueScope continues to play a key role in the transition to a circular economy with 46 per cent of raw steel production originating from recovered and recycled scrap steel, and 98 per cent materials efficiency across our steelmaking assets. | 
 | This year we diverted more than 180,000 tonnes of material away from landfill or treatment, via internal and external reuse and recycling. | 

13 Climate Action | Set a 2050 net zero GHG emissions goal across our operations. | Climate Action Report FY2021 Sustainability Report » Page 35; Climate change and energy
 | Climate scenario analysis refreshed, including a 1.5°C scenario. | 
 | Developed our indicative decarbonisation pathway. | 
 | Initial allocation of up to $150M for climate projects and initiatives over the next 5 years. | 
 | Appointed a Chief Executive Climate Change and established a corporate climate team. | 
 | Continued to link climate performance to executive remuneration. | 
 | First Climate Action Report published. | 

16 Place, Justice and Stewarding Institutions | Refreshed Our Code of Conduct, How We Work, was launched this year and sets out our expectations for employees and those we do business with, including those on human rights. How we Work is published in 12 languages and has been communicated across our global business, accompanied by manager toolkits and employee training packs. | FY2021 Sustainability Report » Page 64; Compliance and ethical conduct » Page 29; Culture and capability – Our Leaders promote Our Code of Conduct, How We Work

17 Partnerships for the Goals | There are a number of instances throughout the Report where we recognise the importance of partnership and collaboration along the steel value chain. These include our support for key organisations and initiatives such as worldsteel, ResponsibleSteel™, Building 4.0 CRC, BlueScope's Renewable Manufacturing Zone at Port Kembla and various climate partnerships. We also recognise the importance of our work with suppliers for responsible sourcing, with customers to understand their needs for sustainable product solutions and our engagement with, and support for, local communities where we operate. | FY2021 Sustainability Report » Page 43; Supply chain sustainability » Page 35; Climate change and energy » Page 50; Sustainable products » Page 56; Strong communities

---

4 Our ability to achieve net zero GHG emissions by 2050 will be highly dependent on five key enablers, refer to Glossary for further details.

**Biodiversity**

304-1 Operational sites owned, leased, managed in, or adjacent to, protected areas and areas of high biodiversity value outside protected areas

A number of our sites are situated in close proximity to areas of cultural or ecological significance. Various controls and management processes are in place to ensure the preservation and enhancement of these protected areas.

**Environmental compliance**

307-1 Non-compliance with environmental laws and regulations

In FY2021 we notified the relevant authorities of 16 incidents resulting in environmental non-compliance. See page 48 of the Sustainability Report.

Further details are provided in BlueScope’s FY2021 Directors’ Report, available on our website.
<table>
<thead>
<tr>
<th>Metric/terms</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Production definitions</strong></td>
<td></td>
</tr>
<tr>
<td>Raw (or crude) steel (t)</td>
<td>Steel in its first solid (or usable) form measured at each caster at our steel production facilities and reported in tonnes (t).</td>
</tr>
<tr>
<td>Despatch tonnes (t)</td>
<td>Invoiced despatches of steel and steel products, including intercompany transfers, reported in tonnes (t).</td>
</tr>
<tr>
<td>Tonnes (t)</td>
<td>Unit of measurement equivalent to 1,000 kilograms, or 1.1023 short tons (US tons). In the US it may be referred to as a “metric ton”.</td>
</tr>
<tr>
<td><strong>Health and Safety</strong></td>
<td></td>
</tr>
<tr>
<td>Lost Time Injury (LTI)</td>
<td>A work-related fatality, injury or occupational disease or illness that results in the loss of one or more complete shifts any time after the day or shift on which the injury or illness occurred. A Medical Practitioner (if available) must certify the injured person as unable to perform any duties for an injury to be classified as a lost time injury.</td>
</tr>
<tr>
<td>Lost time injury frequency rate (LTIFR)</td>
<td>Number of Lost Time Injuries per million hours worked (Employee and contractor).</td>
</tr>
<tr>
<td>Medical treatment injury (MTI)</td>
<td>A work-related injury or occupational disease or illness to an employee or contractor requiring treatment by a Medical Practitioner (Doctor, GP, Medical Specialist, etc), with the treatment classified as of an invasive nature (e.g. beyond the scope of first aider). Total medical treatment injuries are inclusive of fatalities and lost time injuries.</td>
</tr>
<tr>
<td>Total recordable injury (TRI)</td>
<td>TRI is equivalent to MTI and includes Fatalities, Lost Time Injuries, Medical Treatment Injuries and work restrictions of more than seven days.</td>
</tr>
<tr>
<td>Total Recordable Injury frequency rate (TRIFR)</td>
<td>Number of Total Recordable Injuries per million hours worked (Employee and contractor).</td>
</tr>
<tr>
<td>Hours worked</td>
<td>Hours worked refers to the total number of actual hours where employees and contractors are present as a condition of their employment and are carrying out activities related to their employment duties.</td>
</tr>
<tr>
<td><strong>People</strong></td>
<td></td>
</tr>
<tr>
<td>Contractor</td>
<td>An individual, company or other legal entity who carries out work or performs services pursuant to a Contract for Service. Contractor statistics and performance data are included within BlueScope’s reported statistics when the contractor is performing work undertaken under BlueScope’s Health and Safety Management System/s. Where a contractor is performing work under their own Health and Safety Management System, the statistics and performance data will not be included in BlueScope’s reported statistics.</td>
</tr>
</tbody>
</table>
### Metric/terms

<table>
<thead>
<tr>
<th>Metric/terms</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employee</td>
<td>A person in full time, part-time or fixed term employment at a BlueScope business, reported on a head count basis. Where: ▸ <strong>Full-time employment</strong> is defined as an employee who works a regular or standard number of hours of at least 38 hours per week. ▸ <strong>Part-time employment</strong> is defined as an employee who works less than full-time hours per week. Usually works regular hours per week. ▸ <strong>Fixed term employment</strong> is defined as an employee who is employed for fixed length of time greater than 3 months duration, on a contract with an end date. Casu<strong>als</strong> are defined as employees who are not working regular hours each week/month. Casu<strong>als</strong> does not include persons working as third-party contractors (refer to 'contractors').</td>
</tr>
<tr>
<td>Operator and trade employees</td>
<td>Employees working in production operator and trade roles such as labourer, boilermaker, machinery worker, machinist, welder, sheet metal worker technicians, line leaders and drivers. They are sometimes referred to as 'shopfloor employees'. These are manual labourers who do not have a professional qualification. Engineers with a formal qualification are not included in the operator and trade employee statistics.</td>
</tr>
<tr>
<td>Metric/terms</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>2030 Steelmaking Target</strong></td>
<td>Target of 12 per cent reduction of GHG emissions intensity by 2030 across BlueScope's steelmaking activities at Port Kembla, Glenbrook and North Star. Performance against this target is measured against a 2018 baseline. Steelmaking emissions intensity is calculated based on Scope 1 and Scope 2 GHG emissions per tonne of raw steel at our steelmaking facilities, reported in tonnes of carbon dioxide equivalent (tCO$_2$e) per tonne (t) of raw steel (tCO$_2$e/t). Where facilities produce iron which is then exported for use in another facility, the iron production is converted to an equivalent steel tonnes for the purpose of steelmaking emissions intensity metric calculations.</td>
</tr>
<tr>
<td><strong>2030 Non-Steelmaking Target</strong></td>
<td>Target of 30 per cent reduction of GHG emissions intensity by 2030 across BlueScope's midstream non-steelmaking activities which includes our cold rolled, coated, painted, long and hollow products. This target does not apply to our downstream activities which include roll-forming, pre-engineered building and other downstream activities. Performance against this target will be measured against a 2018 baseline. Non-steelmaking emissions intensity is calculated based on Scope 1 and 2 GHG emissions per tonne of despatched steel at our midstream sites, reported in tonnes of carbon dioxide equivalent (tCO$_2$e) per tonne (t) of despatched steel (tCO$_2$e/t).</td>
</tr>
<tr>
<td><strong>Basic Oxygen Furnace (BOF)</strong></td>
<td>Basic oxygen furnace (BOF) steelmaking is the next step that follows the blast furnace process, where molten iron is made. Blowing oxygen through the iron, through a top lance and/or bottom tuyeres, lowers the carbon content of the molten bath and changes it into low-carbon steel. The process is known as basic because fluxes of burnt lime or dolomite, which are chemical bases, are added to promote the removal of impurities and protect the lining of the converter.</td>
</tr>
<tr>
<td><strong>Electric Arc Furnace (EAF)</strong></td>
<td>An Electric Arc Furnace (EAF) is a steelmaking furnace, in which steel scrap or other iron sources are heated and melted by heat from electric arcs. The viability of EAFs is influenced by several factors, including access to adequate quantities of quality steel scrap, the cost, reliability and emissions intensity of local electricity supply and government policy settings.</td>
</tr>
<tr>
<td><strong>Greenhouse gas emissions (tCO$_2$e)</strong></td>
<td>Total greenhouse gas emissions (GHG) arising from our operations, on an equity share basis in line with the GHG Protocol and reported in tonnes of carbon dioxide equivalent (tCO$_2$e). The gases included are the six classes of gases listed in the Conference of the Parties (COP) to the United Nations Framework Convention on Climate Change (UNFCCC): carbon dioxide (CO$_2$); methane (CH$_4$); nitrous oxide (N$_2$O); Hydrofluorocarbons (HFCs); Perfluorocarbons (PFCs); and Sulphur Hexafluoride (SF$_6$).</td>
</tr>
<tr>
<td><strong>Carbon offset unit</strong></td>
<td>A carbon offset unit represents one tonne of CO$_2$-equivalent emissions avoided or removed by a specific emissions reduction project. Carbon offsets provide recognition of an action taken to produce a reduction, avoidance, removal or sequestration of greenhouse gases.</td>
</tr>
<tr>
<td><strong>Reductant</strong></td>
<td>An element or compound that loses or &quot;donates&quot; an electron to an electron recipient. Both carbon and hydrogen can act as a reductant in removing oxygen from iron ore.</td>
</tr>
<tr>
<td><strong>Scope 1 greenhouse gas emissions</strong></td>
<td>Direct GHG emissions that occur from sources that are owned or controlled by the Company reported in tonnes of carbon dioxide equivalent (tCO$_2$e).</td>
</tr>
<tr>
<td>Metric/terms</td>
<td>Definition</td>
</tr>
<tr>
<td>-----------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Scope 2 greenhouse gas emissions (or Scope 2 emissions)</strong></td>
<td>Indirect GHG emissions from the generation of purchased electricity or steam consumed by sources that are owned or controlled by the Company and reported in tonnes of carbon dioxide equivalent (tCO₂-e).</td>
</tr>
<tr>
<td><strong>Scope 3 greenhouse gas emissions (or Scope 3 emissions)</strong></td>
<td>Indirect GHG emissions that are a consequence of the activities of the Company but occur from sources not owned or controlled by the Company and reported in tonnes of carbon dioxide equivalent (tCO₂-e).</td>
</tr>
<tr>
<td><strong>Energy consumed (GJ)</strong></td>
<td>Energy associated with the combustion of fuels, the use of electricity and other energy sources such as additives, fluxes, compressed air and steam. Where applicable, the energy consumed at site excludes exported energy sources (for example, export coke from coke making facilities).</td>
</tr>
<tr>
<td><strong>Energy intensity (GJ/t)</strong></td>
<td>Energy consumed per tonne of raw steel at our steelmaking facilities, reported in gigajoules per tonne of raw steel produced (GJ/t).</td>
</tr>
<tr>
<td><strong>Water</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Water withdrawn and used (kL)</strong></td>
<td>Fresh water, reused/recycled water and saltwater withdrawn and used and reported in kilolitres (kL).</td>
</tr>
<tr>
<td><strong>Fresh water withdrawn and used (kL)</strong></td>
<td>This represents water demand on available freshwater resources and includes all water sources that are readily available to others in the community and reported in kilolitres (kL). Fresh water resources include municipal water supplies (i.e. domestic water supply), river water, dam water (filtered and unfiltered) and bore water.</td>
</tr>
<tr>
<td><strong>Reused/ Recycled water (kL)</strong></td>
<td>Water supplies collected and, where required, treated to facilitate reuse. This includes water withdrawn from external recycled water pipelines, water treated onsite, and storm/rainwater harvested/collected on site and used and reported in kilolitres (kL).</td>
</tr>
<tr>
<td><strong>Fresh water intensity (kL/t)</strong></td>
<td>Fresh water withdrawn and used per tonne of raw steel at our steelmaking facilities, reported in kilolitres per tonne of raw steel produced (kL/t). Excludes recycled water.</td>
</tr>
<tr>
<td><strong>Co-products and waste</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Scrap steel (t)</strong></td>
<td>Recovered and recycled scrap steel used in the steelmaking process. Includes raw steel production feedstock from home/externally generated scrap, pre-consumer scrap/industrial scrap and post-consumer/end of life scrap.</td>
</tr>
<tr>
<td><strong>Co-products (or by-products)</strong></td>
<td>Materials that are produced in parallel to, or as a consequence of, the production of a primary product and which also have a potential value and reported in tonnes (t). The main solid co-products produced during iron and crude steel production are slags (90 per cent by mass), dusts and sludges. Alongside solid co-products, process gases from coke ovens, blast furnaces and basic oxygen steelmaking furnaces are also important steelmaking co-products. Internally generated scrap steel (pre-consumer scrap) is not included as a co-product.</td>
</tr>
<tr>
<td>Metric/terms</td>
<td>Definition</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Waste produced (t)</td>
<td>The disposal of wastes to a recognised, controlled landfill facility, or the disposal of wastes through incineration where the waste has not been explicitly sold or used as a fuel for another process. Material that has not yet been disposed in a landfill facility or incinerated is not classified as waste until either of these criteria have been met.</td>
</tr>
<tr>
<td>Waste reused/recycled (t)</td>
<td>Waste materials that cannot be reprocessed through our own onsite operations, they can be reused or recycled through an external process. The two sub-classifications are:</td>
</tr>
<tr>
<td></td>
<td>(i) <strong>Recycled domestic/packaging waste</strong>: recycling of paper and cardboard, and other all packaging materials inclusive of steel, aluminium and the various coded plastic containers, i.e. the equivalent to domestic solid waste separated for the purposes of recycling.</td>
</tr>
<tr>
<td></td>
<td>(ii) <strong>Recycled process waste</strong>: non-packaging materials that are reused or recycled externally through alternative processes, and includes materials such as concrete, refractories, lamps, metals, sludges, scale, oils and spent pickle liquor, and where not able to be used onsite, scrap steel.</td>
</tr>
<tr>
<td>Material efficiency (%)</td>
<td>An indicator developed by worldsteel to illustrate the relative efficiency of steel production facilities. Calculated as dividing the tonnes of raw steel and co-products produced by the tonnes of raw steel, co-products and waste produced. Where 'co-products produced' is the total volume of slag produced and 'waste produced' is equivalent to waste landfilled or incinerated from our steelmaking sites.</td>
</tr>
<tr>
<td><strong>Air emissions</strong></td>
<td></td>
</tr>
<tr>
<td>Air emissions (t/annum)</td>
<td>Air emissions refer to oxides of nitrogen (NOx), sulphur oxides (SOx), and fine particulate matter (PM10), each separately reported in tonnes per annum (t/annum).</td>
</tr>
<tr>
<td>Oxides of nitrogen (NOx)</td>
<td>Oxides of Nitrogen (NOx) that are released into the atmosphere that occur from sources that are owned or controlled by the Company, reported per annum in tonnes of NO\textsubscript{2}. Total NOx is the sum of the total Nitric Oxide (NO) and Nitrogen Dioxide (NO\textsubscript{2}) emissions, expressed as NO\textsubscript{2}.</td>
</tr>
<tr>
<td>Sulphur oxides (SOx)</td>
<td>Sulphur Oxides (SOx) that are released into the atmosphere that occur from sources that are owned or controlled by the Company, reported per annum in tonnes of SO\textsubscript{2}. Total SOx is the sum of the total Sulphur Dioxide (SO\textsubscript{2}) and Sulphur Trioxide (SO\textsubscript{3}) emissions. Expressed as SO\textsubscript{2}.</td>
</tr>
<tr>
<td>Fine particulate matter</td>
<td>Fine Particulate Matter below 10 micrometres in diameter (PM10) that are released into the atmosphere that occur from sources that are owned or controlled by the Company, reported per annum in tonnes of PM10. Fine particulate matter is defined as particulate matter emissions below 10 micrometres in diameter (PM10).</td>
</tr>
<tr>
<td><strong>Environmental compliance</strong></td>
<td></td>
</tr>
<tr>
<td>Environmental regulatory non-compliance</td>
<td>Breach of an environmental legal requirement. A non-compliance may be identified through internal or external processes.</td>
</tr>
</tbody>
</table>
