Executive summary

Council's Environmental Sustainability Strategy and Action Plan 2020-2027, the Strategy sets out how we plan to achieve our City's vision to 'balance our cherished environments with our need for great spaces to live and visit, smart transport options and a thriving economy; which adapt and strive to be fair for all' (LMCC 2017:7).

In Lake Macquarie City we acknowledge that environmental sustainability is important to our community. Like many others, Lake Macquarie faces the ongoing challenges of protecting and enhancing our natural landscapes while supporting the development of a sustainable, resilient city and communities – maximising the wellbeing of the City's residents whilst reducing the City's ecological footprint.

We are presented with a multitude of serious and on-going environmental challenges: greenhouse gas emissions; air and noise pollution; species extinction and biodiversity loss; water pollution and scarcity; the drain on natural resources; deforestation; soil degradation; and the adverse effects of climate change. To address these challenges, we engage in a diverse range of

activities. Our mission is to provide services and facilities to promote a sustainable lifestyle and, in keeping with the vision held by Council and the community, create a City where the environment will be protected and enhanced, and where scenic, ecological, recreational and commercial values and opportunities are promoted and protected.

As a sustainable and resilient City, we will further enhance our connected communities to support the health, wellbeing, social opportunities and shared decision-making of our residents. With aims to reduce their vulnerability to economic shocks, social disconnection and natural disasters and hazards.

Real progress to reduce our energy consumption, improve our air quality, and protect and conserve our natural environment requires a determined, long-term effort, with co-operation between a wide range of stakeholders. This demands an ambitious response, practical steps and informed evidence-based policy to identify solutions to enable positive and lasting change for both our environment and the lives of all.

As a local council, we acknowledge we have a responsibility and a duty to act. The measures outlined in this Strategy illustrate Council's commitment and determination to take meaningful action and provide a clear and concise management action plan, to embed into Council operations and to influence the operations of key stakeholders and partners.

The management action plan, Appendix 1 of the Strategy, provides an integrated and targeted approach, which will be reviewed and updated annually to ensure its relevance and maintain an implementation focus. The management action plan identifies a delivery and reporting governance framework together with key Council services that contribute to the Strategy's administration of transformational actions across four strategic themes.

We are defined by how we behave and what we do, so this must be driven by clear values and behaviours that communicate our commitment to environmental sustainability as articulated in our Sustainability Policy. This Strategy further establishes Council's vital

role as key stakeholder to create a city committed to the localisation of the global United Nations Sustainable Development Goals (SDGs).

The *2030 Agenda for Sustainable Development* (UN 2015) adopted in September 2015 by 193 United Nations member states and ratified by the Australian Government describes 17 SDGs of which 13 goals, consistent with the City's Vision and Community Values, have been utilised in the development of this Strategy.

'The coming years will be a vital period to save the planet and to achieve sustainable, inclusive human development.'

(UN 2019)

- Antonio Guterres
Secretary-General of the United Nations

Sustainable Development Goals and associated targets offer a complex, aspiring and holistic global framework applied by governments, organisations and businesses worldwide.

The SDGs provide a framework for the integration of environmental, social, economic and governance aspects of sustainability into local government responsibilities. This Strategy's management actions are mapped across these pillars and the relevant SDGs in recognition of their importance in driving local sustainable and inclusive development.

Ultimately, the SDGs are a fundamental element as to who we are globally and what we plan to do locally and Lake Macquarie City Council is committed to playing a central role to realise them.

All of us have a role to play to tackle the environmental problems of the modern world. Not only do we owe it to today's residents but we also owe it to the next generations.

Localising priorities – percentage of our actions mapped to the four pillars of sustainability and associated SDGs

Note: - management actions can contribute to one or more of the Sustainability Pillars

OVERVIEW

Purpose

Lake Macquarie City Council is committed to building a better City and has long supported the principles of sustainable development, particularly the protection of biodiversity, intergenerational equity in relation to service delivery and public assets, and the integration of environmental, social and economic considerations in decision-making. We engage in a diverse range of activities and our aim is to provide services and facilities to promote a sustainable lifestyle and, in keeping with the City Vision and set of Community Values, guide future planning.

The Lake Macquarie City Environmental Sustainability Strategy and Action Plan 2020-2027 (the Strategy) provides a framework for sustainability planning, decision-making and action to achieve improved environmental sustainability for Lake Macquarie City. The Strategy supports and builds upon the initial strategy, the 2011-2018 Environmental Sustainability Action Plan, and following review in 2014, the 2014-2023 Environmental Sustainability Action Plan (see Appendix 2 for a snapshot of achievements from 2014-2023 Environmental Sustainability Action Plan).

To continue to effect change and enable desired outcomes to be realised, the Strategy provides the framework for action, with a clear and concise implementation plan embedding strategic directions into Council operations.

Council strives to become a leading local government globally by incorporating all four pillars of sustainability (environmental, social, economic and governance) into core business activities. Its aims and priorities are implemented strategically through Council's: Imagine Lake Mac, Our Plan to 2050 and beyond; and Local Strategic Planning Statement to provide land use planning direction for the City. Delivering an adaptable approach to sustainably manage growth and development for prosperity into the future.

The Lake Macquarie City Community Strategic Plan 2017-2027 outlines how Council will work with the community to address challenges and identify major priorities to 2027. Further detail on Council's programs are contained in Council's four-year Delivery Program and Annual Operational Plan.

Our vision, our values

Lake Mac's City Vision and Community Values, developed by the community in 2016, guide our planning and provide direction for how the City responds to change and growth. The Vision and Values reflect the priorities of our residents and shape policies and plans prepared by Council, including this Strategy.

Our Vision

Lake Macquarie is a City with a lake at its heart encircled by distinctive towns and villages.

We balance our cherished environments with our need for great spaces to live and visit, smart transport options and a thriving economy; which adapt and strive to be fair for all.

(LMCC 2019:13)

Our Values

Unique landscape

A place where the natural environment (bushland, coast, lake and mountains) is protected and enhanced; where our existing urban centres are the focus of our growth, maintaining their unique characteristics.

Lifestyle and wellbeing

A place that encourages safe, active and social opportunities.

Mobility and accessibility

Effective transport systems that provide choices to conveniently move people, goods and services.

Diverse economy

Which is resilient and adaptable to change, making the best use of the unique advantages of our location and lifestyle.

Connected communities

That support and care for all and provide a sense of belonging.

Creativity

Working together with creative process and outcomes that bring together history, culture, knowledge and expertise that support new technologies and ways of thinking.

Shared decision-making

Lake Macquarie communities continue shared responsibility for governance.

Alignment of Strategy themes with Community Strategic Plan 2017–2027 values

OUR ROLE

IN DRIVING ENVIRONMENTAL SUSTAINABILITY

Our challenge

Local government, as the level of government closest to the community, acknowledges environmental management as a core function. A fundamental aspect of an environmental sustainability strategy is to identify opportunities to achieve positive outcomes through action, partnerships and advocacy and to develop a holistic approach to strive for and achieve all future goals.

The Environmental Sustainability Strategy is Council’s strategic response to address community expectation and face important challenges of the future, including:

- Biodiversity conservation
- Efficient use of energy and water
- Climate change (mitigation and adaptation)
- Waste management
- Sustainable growth

The benefits to developing this Strategy include:

- Aligning with Council’s Sustainability Policy
- Consolidating actions to achieve Council’s environmental resilience and sustainability priorities
- Providing a medium-term action plan aligned with the City’s Community Strategic Plan
- Mainstreaming environmental sustainability across Council
- Implementing aspects of Council’s Local Strategic Planning Statement
- Providing a location where Council’s environmental actions are documented and tracked to inform annual reporting, including the State of the Environment report.
- Incorporating global United Nations Sustainable Development Goals into planning processes

Our values and behaviours

How we achieve our City Vision and Community Values is as important as the vision and values themselves. We are defined by how we behave and what we do, so this must be driven by clear values and behaviours that communicate our commitment to environmental sustainability as articulated in our overarching Sustainability Policy. Under this policy Council commits to making an equitable contribution to all aspects of sustainability (environmental, social, economic and sustainable governance) for Council and the City.

SUSTAINABILITY POLICY

Scope

The Local Government Act 1993 mandates a requirement for council decision making to consider sound financial management, investment in responsible and sustainable infrastructure, principles of ecologically sustainable development and social justice principles. Accordingly, the scope of this policy pertains to all persons conducting or undertaking business on behalf of Council.

Objectives

The objectives of this policy are to establish a common commitment to the four pillars of sustainability and to ensure that decision-making considers the needs of current and future generations of Lake Macquarie City.

Policy Statement

Lake Macquarie City Council is committed to making an equitable contribution to all aspects of sustainability for the organisation and the City. For us, being sustainable means:

Economic sustainability: we will help to build prosperity for the people of Lake Macquarie City by encouraging economic growth and sustainable development. We will ensure cost-effective delivery of works and services, as well as appropriate maintenance and renewal of our asset base within the framework of present and future financial sustainability.

Environmental sustainability: we will use resources wisely and help to enhance the quality of our natural landscapes. When making decisions we will seek to achieve positive outcomes for our local environment and make an equitable contribution to improving regional, national and global environments.

Social sustainability: we will help to build an inclusive, resilient and connected community that embraces innovation and creativity, and values our heritage. When making decisions and actions that affect the broad community we will undertake inclusive community engagement.

Sustainable governance: we will demonstrate transparency, fairness, ethical practices and accountability. We will encourage and promote effective public, public-private and civil society partnerships.

Applicability

We will demonstrate leadership by undertaking decision-making through the integrated framework of the Sustainable Development Goals that delivers a whole of Council approach to sustainable policy, infrastructure and services. We will share responsibility for our performance with all who work for and with us, and regularly report on our progress.

This Strategy establishes our role for environmental sustainability for the City and the incorporation of the global United Nations Sustainable Development Goals (SDGs) into planning processes.

The *2030 Agenda for Sustainable Development* adopted in September 2015 by 193 United Nations member states and ratified by the Federal Government of Australia describes 17 SDGs of which 13 goals, consistent with Council's Vision and Community Values, have been utilised in the development of this Strategy.

The SDGs and associated targets (which offer a complex, aspiring and holistic global framework) build on the four pillars of sustainability (environmental, social, economic, and governance) and our Strategy's management actions link to the pillars and relevant SDGs to recognise their importance in driving local, sustainable and inclusive development.

Our targets

The targets have been developed, following a review of best practice approaches, to drive and measure our progress toward the goals stated in each theme. The targets considered factors such as available research, existing evidence-based approaches, data availability and the extent that Council can influence the actions required to move toward the realisation of these goals.

Community and stakeholder consultation was undertaken on both the strategic themes and the targets. Further consultation provided specific actions to guide our effort and describe detailed measurable indicators that make a meaningful contribution toward the theme goals.

The targets presented focus on factors for:

 **Enhancing our natural landscapes**

 **Supporting resilient communities**

 **Creating a sustainable city and communities**

 **Responsible consumption and production**

Unless otherwise stated, targets are for the period 2008-2027 (a baseline of 2007-2008, being four years prior to the initial 2011-2018 Environmental Sustainability Action Plan)

Targets for 2027

STRATEGIC THEME 1

Protecting and enhancing our natural landscapes

The targets presented focus on factors that have been shown to be key for maintaining ecosystem function, such as connectivity, protection of habitat of high conservation value and ecosystem health and land use practices that support high water quality in the aquatic environment

- 1.1 Maintain at least 57.5% native vegetation cover in the City
- 1.2 Improve the condition of 30% of public land with high conservation value compared to 2007 baseline
- 1.3 No net loss in connectivity of ecological communities from 2007 baseline
- 1.4 5% increase in area of the City (land and water) with conservation status compared to 2007 baseline
- 1.5 20% increase in lake and waterway health compared to 2007 baseline
- 1.6 Achieve a '100% Water Cycle City' state (using the Water Sensitive Cities Benchmarking Assessment)
- 1.7 90% of residents place a high value on the health of the natural environment (beaches, lake and bushland) of Lake Macquarie

STRATEGIC THEME 2

Supporting resilient communities

The targets presented focus on factors that help the community and Council, in relation to its own assets, understand the risks from natural hazards and the influence climate change is expected to have on the frequency and severity of these events and its specific contribution to sea level rise and how we prepare for these risks so adverse outcomes can be minimised.

- 2.1 Natural disaster risk reduction strategies in place for 100% of the City's extreme and high risks
- 2.2 Climate change risk reduction strategies in place for 100% of the City's extreme and high risks
- 2.3 100% of known contaminated public land assessed for risk to human health and prioritised for risk mitigation measures
- 2.4 Air quality emissions in the City meet the National Environment Protection (Ambient Air Quality) Measure
- 2.5 70% of residents believe they have the information and resources needed to prepare, respond and recover from adverse events

STRATEGIC THEME 3

Creating a sustainable city and communities

The targets presented focus on factors: that maximise the efficient use of energy and reduce reliance on non-renewable energy sources (with reducing greenhouse gas emission as a well-recognised indicator); that drive efficient use of water and encourage diversification of suitable supply options; and that guide land use and transport planning to support development of a high quality built environment.

- 3.1 57% reduction in City-wide per capita and total Council greenhouse gas emissions from 2007 baseline
- 3.2 12% reduction in City-wide per capita and total Council drinking water consumption from 2007 baseline
- 3.3 Increase active transport (walking and other) to 15% of total trips (Transport for NSW Household Travel Survey - Data by LGA)
- 3.4 80% of residents report taking positive actions to source renewable energy and/or conserve water and/or undertake active transport trips

STRATEGIC THEME 4

Responsible consumption and production

The targets presented focus on factors: that maximise the value placed on finite resources by encouraging separation of once unrecovered resources, into useful components, and development of markets for their beneficial reuse; and recognise that resources include the land, water and energy needed to create our goods and services, as captured in the concept of the ecological footprint.

- 4.1 30% reduction in the per capita ecological footprint of the City from 2007 baseline
- 4.2 To divert 75% of waste from properties serviced by Council (residential and commercial) away from landfill
- 4.3 To divert 90% of construction and demolition waste generated and managed by Council operations away from landfill
- 4.4 100% of Council tender specifications include recycled products, where a functionally and economically viable alternative to new materials is available
- 4.5 Increase the number of businesses in the region involved in Circular Economy manufacturing, design, reuse, repair and recycling of materials by 20% from 2019 baseline
- 4.6 90% of residents believe it is important for residents of Lake Macquarie to reduce their resource consumption

STRATEGIC THEMES AND KEY COMMITMENTS

STRATEGIC THEME 1

Protecting and enhancing our natural landscapes

OBJECTIVE

We aim to sustain and enhance our City's natural ecosystems, which include our lake, waterways, bushland, wetlands and open coast. These places provide essential services and contribute to our amenity, health, identity and lifestyle.

Working to achieve the environmental sustainability targets will help us protect and enhance the City's natural landscapes by:

- Ensuring ecosystems are connected
- Protecting habitat of high conservation value
- Encouraging land use practices that support high water quality in the aquatic environment.

KEY SDGS:

STRATEGIC THEME 2

Supporting resilient communities

OBJECTIVE

We aim to prepare, respond and recover from adverse events. These events may be natural disasters, economic shocks or social disconnection. We work together to build our social cohesion, resourcefulness and self-sufficiency, so that when confronted with adversity we are able to adapt, recover and be better prepared.

Working to achieve the environmental sustainability targets will help us support resilient communities by:

- Addressing the risks to health, safety and infrastructure from natural hazards and pollution events
- Addressing the influence climate change is expected to have on the frequency and severity of natural hazards.

KEY SDGS:

STRATEGIC THEME 3

Creating a sustainable city and communities

OBJECTIVE

We aim to improve our living conditions, by creating a city that is safe, attractive and inclusive. Our City is a model of environmental sustainable development. It has diverse housing, employment and services, connects people to open spaces and is easy to get around. Working to achieve the environmental sustainability targets will help us in creating a sustainable city and communities by:

- Maximising the efficient use of energy and reducing greenhouse gas emissions
- Maximising the efficient use of water and diversifying suitable supply options such as harvested stormwater
- Implementing sustainable transport options including low emission vehicles, walking and cycling
- Guiding land use planning to support development of a high-quality built environment.

KEY SDGS:

STRATEGIC THEME 4

Responsible consumption and production

OBJECTIVE

We aim to establish a local economy where natural resources are valued and consumed within the limits in which they are created. We make and buy products that are durable and reusable, with minimal waste. Where waste is generated, it is used as a resource in the creation of new products.

Working to achieve the environmental sustainability targets will help us create an even more liveable city by:

- Encouraging separation of once unrecovered resources into useful components and development of markets for their beneficial reuse; and
- Recognising that resources include the land, water and energy needed to create our goods and services, as captured in the concept of the ecological footprint.

KEY SDGS:

Glossary

Acronyms and abbreviations

MWh	megawatt hour
MWp	megawatt peak
SDG	Sustainable Development Goal
UN	United Nations

Other terms

conservation status	formally, 'conservation status' refers to a worldwide listing and ranking by the International Union for Conservation of Nature (IUCN). Broadly for the context of this Strategy, 'conservation status' deals with species and/or population at a local scale to maintain conservation of biological diversity and ecological integrity and to strategically prioritise conservation planning.
ecological footprint	the ecological footprint is a resource accounting tool, as calculated by the Global Footprint Network, that measures the impact of human activities and their demand on nature. It provides an understanding of the amount of biologically productive land and water area required to sustain humanity (consumption patterns, the economy and absorption of generated waste) and provides a quantitative account to assist decision-making for a sustainable future.
greenfield development	an urban development slated for previously undeveloped (greenfield) land in a city or rural area.
infill development	the process of developing vacant or under-used parcels of land within existing urban areas, that are already largely developed.
megawatt peak (MWp)	in the energy industry, the output of a solar electricity module is measured in megawatts peak (MWp) or kilowatts peak (kWp). In the case of photovoltaic modules and systems, the value refers to the rated standardised output (measured under test conditions - 25° Celsius module temperature and irradiance of 1000 watts per square metre). 1MWp = 1000kWp
National Environment Protection (Ambient Air Quality) Measure	the National Environment Protection (Ambient Air Quality) Measure (AAQ NEPM) was established in 1998 under the National Environment Protection Act 1994 (Commonwealth) (NEPC Act) – designed to provide a nationally consistent framework for monitoring and reporting on six common ambient air pollutants. The pollutants include carbon monoxide, lead, nitrogen dioxide, ozone, sulphur dioxide and particulate matter (PM ¹⁰ and PM ^{2.5}).

Appendices

Appendix 1

Strategy Action Plan established actions 2020-2027

The following Action Plan sets out a vision across four strategic themes:

 **Protecting and enhancing
our natural landscapes**

 **Supporting resilient
communities**

 **Creating a sustainable
city and communities**

 **Responsible consumption
and production**

Protecting and enhancing our natural landscapes - City

We aim to sustain and enhance our City's natural ecosystems, which include our lake, waterways, bushland, wetlands and open coast. These places provide essential services and contribute to our amenity, health, identity and lifestyle.

♥ Supporting resilient communities - City

We aim to prepare, respond and recover from adverse events. These events may be natural disasters, economic shock or social disconnection. We work together to build our social cohesion, resourcefulness and self-sufficiency, so that when confronted with adversity we are able to adapt, recover and be better prepared.

STRATEGIC THEME 2

♥ Supporting resilient communities - Council

Issue	Proposed management approach or response	ESSAP 2020-2027 Management Action reference	Timeframe	Management Action	Alignment with other relevant Policy, Plan, Strategy
City resilience	Risk assessment	RC19 (Council)	⊕	Regular review, audit and analysis of department risk registers.	(Draft) Enterprise Risk Management Framework (version 2 - 2018)
Climate change	Risk assessment	RC20 (Council)	⊕	Through local adaptation planning process, identify vulnerability of existing recreational facilities to sea level rise and maintain access to recreation facilities.	Waterway Flooding and Tidal Inundation – Council Policy 2012 (version 3 - 2016)
Contaminated land	Risk management	RC21 (Council)	⊕	Ensure that any contaminated excavated material from Council project or maintenance work sites is managed according to Environment Protection Authority requirements.	Managing Contaminated or Potentially Contaminated Land 2012 – Council Policy (version 7 - 2018)
Natural hazards resilience	Risk management	RC22 (Council)	⊕	Implement continuous improvements to the Property Flooding Information Summary web tool.	Digital Economy Strategy 2016-2020
Natural hazards resilience	Risk management	RC23 (Council)	⊕	Implement continuous improvements to the City-wide flood and early warning systems and emergency plans.	Lake Macquarie Environmental Security Assessment 2010 Climate Change Risk Assessment Adaptation Report (June 2010) EMPLAN 2017
City Resilience	On-ground works	RC24 (Council)	⊕	Implement works or other strategies to improve the process for the renewal of road pavement assets.	Asset Management 2011 – Council Policy (version 4 – 2017)
Climate change	Risk management	RC25 (Council)	⊕	Implement actions in the Marks Point and Belmont South Local Adaptation Plan.	Marks Point and Belmont South LAP (March 2016)
Contaminated land	Risk management	RC26 (Council)	⊕	Implement and continually improve Council's contaminated land policy and procedures.	Managing Contaminated or Potentially Contaminated Land 2012 – Council Policy (version 7 - 2018)
Contaminated land	Risk management	RC27 (Council)	⊕	Implement Council specific recommendations from the Lead Expert Working Group Report on Managing Residual Lead Contamination in North Lake Macquarie.	Managing Contaminated or Potentially Contaminated Land 2012 – Council Policy (version 7 - 2018)

Primary Responsible Department	Primary Internal Team	Due Date	ESS 2027 Target	Monitoring or Evaluation method	Key United Nations Sustainable Development Goal (SDG)	Integration with the four Pillars of Sustainability
People, Culture and Risk	Risk Management Team	30/06/2023	2.1 2.2	• Scheduled audits (aligning with Work Health Safety Audit Plan 2018-2020).		   
Environmental Systems	Environmental Strategy	30/06/2023	2.1 2.2	• Sea level rise policy, guidelines and new flood levels incorporated for planning and designing all new Council infrastructure. • Undertake local adaptation planning.	 	
City Works	City Construction	30/06/2023	2.3	• Appropriate licences current. • Contaminated Land Register entry.	  	 
Environmental Systems	Environmental Strategy	30/06/2023	2.1 2.2 2.5	• Improved links in tool to the Lake Macquarie Development Control Plan (DCP). • Floor level data integrated. • Definitions amended to improve clarity. • Mapping interface incorporated (to illustrate the predicted one per cent flood extent) in relation to property boundaries and existing buildings. • User satisfaction survey (capture of community feedback on Tool).	  	 
Environmental Systems	Environmental Strategy	30/06/2023	2.1	• State of the Environment reporting. • Early Warning Network user evaluation survey. • Flood warning system monitoring score - performance score (per cent data capture).	  	 
Asset Management	AM - Infrastructure Assets	30/06/2025	2.1 2.2	• Road pavement renewal plan developed. • Post road pavement review undertaken - incorporating testing for suitability of the bitumen binder type (and ascertain if type used assists in lowering water permeability/saturation to the road pavement as may be caused by sea level rise).	  	 
Environmental Systems	Environmental Strategy	30/06/2025	2.2	• Priority actions implemented.	  	 
Environmental Systems	Environmental Strategy	30/06/2025	2.3	• Policy review. • Total number of sites registered. • Number of sites registered with notation 1 - 6.	  	  
Environmental Systems	Environmental Strategy	30/06/2025	2.3	• Number of recommendations implemented.	  	   

Issue	Proposed management approach or response	ESSAP 2020-2027 Management Action reference	Timeframe	Management Action	Alignment with other relevant Policy, Plan, Strategy

Creating a sustainable city and communities - City

We aim to improve our living conditions, by creating a city that is safe, attractive and inclusive. Our City is a model of environmental sustainable development. It has diverse housing, employment and services, connects people to open spaces and is easy to get around.

Responsible consumption and production - City

We aim to establish a local economy where natural resources are valued and consumed within the limits in which they are created. We make and buy products that are durable and reusable, with minimal waste. Where waste is generated, it is used as a resource in the creation of new products.

	Environmental Systems	Asset Optimisation	30/06/2025	4.2 4.4	<ul style="list-style-type: none">• Material Flow Analysis tool maintained and updated.• Percentage of tender specifications including recycled materials.• Design guidelines reviewed.• Number of material trials.						

Appendix 2

Snapshot of Achievements

2014-2015 to 2017-2018

Snapshot of achieved progress across themes - within the four year working life (2014-2015 to 2017-2018) of ESAP 2014-2023

ENERGY

REDUCTION IN GREENHOUSE GAS EMISSIONS

(below 2007-2008 baseline levels)

↓ **30%**
(Council)

↓ **6.08%**
(City - per capita)

SOLAR RENEWABLE ENERGY INSTALLED CAPACITY

196.1 MWh (Council)

45.31 MWp (City)
(2017-2018 capacity)

WASTE

UPTAKE OF COUNCIL COMMERCIAL RECYCLING SERVICES

↑ **7.52%**

(increase on 2007-2008 baseline levels)

DECREASE IN WASTE TO LANDFILL

↓ **31.6%**

(City - kg per capita reduction)
(below 2007-2008 baseline level)

NATURAL ENVIRONMENT

ON-GROUND WORKS

(from 2014-2015 to 2017-2018 financial year)

Area of land rehabilitated	109.62ha
Wetland improvement	99.76ha
SQID - pollutant trapping area	43.34ha
Streambank rehabilitation	1,365m

COASTAL ZONE MANAGEMENT PLAN IMPLEMENTATION

Providing for a more balanced focus on both lake and coastline with Council's CZMP plan certified by the NSW Minister for Planning and Environment in August 2016, under the NSW Coastal Protection Act 1979

CLIMATE CHANGE ADAPTATION

LOCAL AREA ADAPTATION PLANNING

Marks Point and Belmont South
adopted

Pelican and Blacksmiths
(80% complete)

Swansea
(commenced)

WATER AND LAND

CITY POTABLE WATER CONSUMPTION

↑ **0.59%**

(0.57kL/capita increase on 2007-2008 baseline)
(2017-2018 potable water use per capita - 97.62kL)
(2007-2008 baseline - 97.05kL/capita)
(2023 target: 5% per capita reduction versus 2007-2008 baseline)

COUNCIL WATER CONSUMPTION

↑ **11.65%**

(46,375kL) (2017-2018 climate corrected outcome)
(2023 target: 12% reduction on 2007-2008 baseline)

TRANSPORT

CONSTRUCTION OF OFF-ROAD SHARED PATHWAY

↑ **15.59km**
(35.91%)

(from 2014-2015 to 2017-2018 financial year)
(2017-2018: total length off-road shared pathway 59km)

NATURAL HAZARDS

LAKE MACQUARIE CITY-WIDE FLOOD WARNING SYSTEM

99.7%
performance score

(per cent data capture for flood warning system monitoring and equipment)

MAINTENANCE OF ASSET PROTECTION ZONES

183

APZs across the City
(over 60 hectares maintained annually)

ENVIRONMENTAL HEALTH

CONTAMINATED LAND

Implementation of Council's Contaminated Land Database

AIR POLLUTION EMISSIONS

No net increase in per capita air pollution emissions within the City

Establishment of Air Quality Reference Group
