SkinGlow Program Treatment Information Sheet

What is the SkinGlow program?

Your laser, LED light, and hyaluronic acid treatments are staggered for best results.

The laser gets rid of large pores, excess redness, fine lines and wrinkles, with the LED therapy rejuvenating skin cells, and the hyaluronic acid blend the final touch to stimulate collagen and elastin.

Hyaluronic acid injections can compensate for the natural loss of hyaluronic acid in the skin that occurs as we age, but it does more than that – it actually rejuvenates your skin as long as it remains present.

Effective SkinGlow treatments

- Radiofrequency
- LED
- Redensity-1 hyaluronic acid blend

SkinGlow solutions work to:

- Smooth skin
- Hydrate skin from underneath the surface
- Refine pores and scars
- Improve skin tone significantly
- Act as an anti-ageing treatment and preventative

How soon will I see results?

The SkinGlow treatment program is conducted over three months, with the treatments staggered over this period for optimal results.
