

ABOUT THE SCHOOL OF INDUSTRY AND ECONOMY (SIE)

SIE provides professional and graduate Cyber Age education services.

We align learning with the needs of the Economy and its Industries.

Skill facts, principles and practices (problem analysis and solving) are learned and applied through online courses at SIE.

A survey of and/or practicing the use of Cyber methods and tools for driving innovation and productivity in the Cyber Age are part of most courses.

Further specific/customized 'Blended Learning' services are available for optimizing alignment of skill development with specific Industries and Organizations.

Our blended learning customization is an agile process of dynamically blending relevant learning with on the job skills needed in Industry, by matching and re-matching online, classroom, on-the-job practices and learning, and training within Industries and Organizations.

Please contact us at admin@sienz.org for customizing blended learning specific to your needs.
