

## Power meter box – Avoiding damage during installation

### Possible causes

1. When connecting to the battery, the Power meter box Wind turbine side wire was in short circuit condition.
2. When connecting to the battery, battery wire "+" and "-" had reversed connection.

### How to avoid

1. First make sure that all of connections are correct and wires are secured in terminal strip.
2. Ensure no wrong connection or short circuit.
3. If ok, connect to the battery.

Following the above steps will prevent burn-out of the power meter box or controller.
