Find three images online to see how the principles and elements of design have been used to achieve the result.

**For example:**
- **Image 1. A house façade**
- **Image 2. A living area**
- **Image 3. A kitchen**

Refer to the elements and principles of design and select two of each (two elements and two principles) and identify where these have been used within each of your images.

By doing this exercise, you will be able to better understand some of these design terms, as well as assist you in understanding how they can be used within your renovation, by seeing that all of the items which make a space successful and pleasing to the eye are actually following a set of guidelines.

You may for example see how the **Element of “Line”** has been used on a façade, with the horizontal lines in the garage door helping to make a house appear wider than it is,

**OR**

You may see how the **Principle of “Progression”** has been used, with three different sized chopping boards, placed one in front of the other, leaning against the splashback in the kitchen for styling.
