

**Daniel Ryding**  
Head of Development

If Daniel left the room – what would someone say about him?

“

A driven yet approachable professional who is well-respected by his team. He leads with selflessness for the good of his team and the company.

”

Daniel started at InfoTrack in 2013 as a developer with a background in robotic engineering. Having worked for an engineering company for 9 years, he was looking for a change of pace and decided to pursue his interests in software and programming. From the start of his career with InfoTrack, his passion, commitment and ability to learn were evident and he quickly worked his way up as a manager and became Head of Development in 2017.

During his time at InfoTrack, Daniel has been instrumental in developing the company's innovative eConveyancing solution, including eCOS and SignIT. He has also provided significant value in the creation and ongoing updates of the data visualisation tool REVEAL.

As Head of Development, Daniel leads his team in writing new products and continuing to develop and improve upon existing services. They work closely with the Product and Innovation Teams to lead the direction of the company and ensure that InfoTrack provides clients with the most intuitive and efficient technology to enhance their day-to-day working lives.

Daniel loves working at InfoTrack because every day brings him the opportunity to make a positive change for the business, its people and its clients. He has the freedom to make change for the good without roadblocks or politics and can clearly see the progress and achievements that come from his team's hard work. For Daniel, culture is key to life at InfoTrack and he works hard to continue to cultivate that 'small start-up' feeling in his team, no matter what size it grows to!

In his spare time, Daniel can be found at the gym, at the beach or travelling on another adventure with his fiancé.
