

KERRON™

Levetiracetam film-coated tablets and oral solution

Consumer Medicine Information

What is in this leaflet

This leaflet answers some common questions about KERRON.

It does not contain all the available information. It does not take the place of talking to your doctor or pharmacist.

All medicines have risks and benefits. Your doctor has weighed the risks of you taking KERRON against the benefits they expect it will have for you.

If you have any concerns about taking this medicine, ask your doctor or pharmacist.

Keep this leaflet with the medicine.

You may need to read it again.

What KERRON is used for

KERRON is used to control epilepsy.

Epilepsy is a condition where you have repeated seizures. There are many different types of seizures, ranging from mild to severe.

This medicine belongs to a group of medicines called antiepileptics.

These medicines are thought to work by controlling brain chemicals which send signals to nerves so that seizures do not happen.

KERRON may be used alone, or in combination with other medicines, to treat your condition.

Your doctor may have prescribed this medicine in addition to your current therapy.

Ask your doctor if you have any questions about why this medicine has been prescribed for you.

There is no evidence that this medicine is addictive.

This medicine is available only with a doctor's prescription.

The safety and effectiveness of KERRON has not been established in patients less than 4 years of age.

Do not take this medicine if the solution is not clear, if the tablets do not look quite right or the packaging is torn or shows signs of tampering.

If this medicine has expired or is damaged, return it to your pharmacist for disposal.

If you are not sure whether you should start taking this medicine, talk to your doctor or pharmacist.

Before you start to take it:

Tell your doctor or pharmacist if you have allergies to:

- any other medicines, especially barbiturates (such as phenobarbitone) or any other antiepileptic medicines (such as carbamazepine, lamotrigine or valproate); or
- any other substances, such as foods, preservatives or dyes.

Tell your doctor if you have or have had any medical conditions, especially the following:

- kidney problems; or
- liver problems.

Tell your doctor if you are pregnant or intend to become pregnant.

KERRON may affect your developing baby if you take it during pregnancy. However, it is very important to control your seizures while you are pregnant. Your doctor will outline and weigh up all the risks and benefits of taking KERRON during pregnancy to help decide whether or not you should take it.

Tell your doctor if you are breastfeeding or plan to breast-feed.

The active ingredient in KERRON passes into breast milk and there is

a possibility that your baby may be affected. Your doctor will discuss the risks and benefits of using KERRON if you are breastfeeding.

If you have not told your doctor or pharmacist about any of the above, tell them before you start taking KERRON.

Taking other medicines:

Tell your doctor or pharmacist if you are taking any other medicines, including any that you buy without a prescription from your pharmacy, supermarket or health food shop.

KERRON does not interact with the oral contraceptive pill.

However, you may be given KERRON together with other antiepileptic medicines that do interact and may affect the effectiveness of your contraceptive. Your doctor may advise you to use an additional method of contraception if you take KERRON with other antiepileptic medicines.

How to take KERRON

How much to take:

Follow all directions given to you by your doctor carefully.

They may differ from the information contained in this leaflet.

Your doctor will tell you how much KERRON you will need to take each day. This may depend on your age, your condition and whether or not you are taking any other medicines.

For patients 12 years of age and older, the dosage is generally between 1000 mg and 3000 mg each day, taken in two doses.

For the oral solution, 1000 mg equates to 10 mL and 3000 mg equates to 30 mL.

For children 4 to 11 years of age the doctor will calculate the dosage based on the child's weight and tell

you how much to give. The medicine is to be given twice daily.

Your doctor may start you on a low dose of KERRON first.

Your doctor will slowly increase the amount of medicine until you are taking enough to control your epilepsy and you are not having seizures.

If you do not understand the instructions on the pack, ask your doctor or pharmacist for help.

How to take it:

Film-coated tablets:

Swallow the tablets whole with a glass of water.

Oral solution:

Use the syringe provided in the cardboard box to measure the exact quantity of oral solution prescribed by your doctor.

KERRON oral solution may be diluted in a glass of water or baby's bottle.

Open the bottle, press the cap and turn it anticlockwise (figure 1).

Separate the adaptor from the syringe (figure 2). Insert the adaptor into the bottle neck (figure 3). Ensure it is firmly attached.

Take the syringe and put it in the adaptor opening (figure 4). Turn the bottle upside down (figure 5).

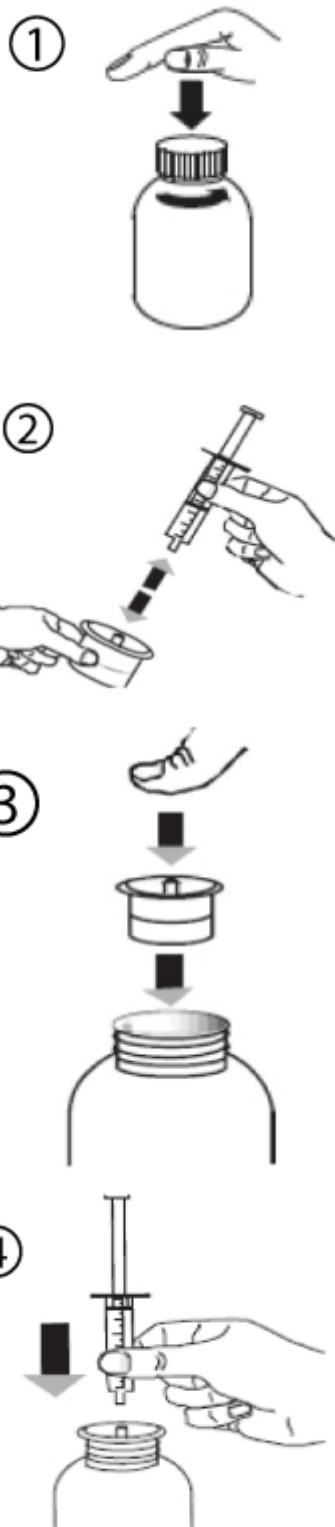

Fill the syringe with a small amount of solution by pulling the piston down (figure 5A), then push the piston upward in order to remove any possible bubble (figure 5B). Pull the piston down to the graduation mark corresponding to the quantity in millilitres (ml) prescribed by your doctor (figure 5C).

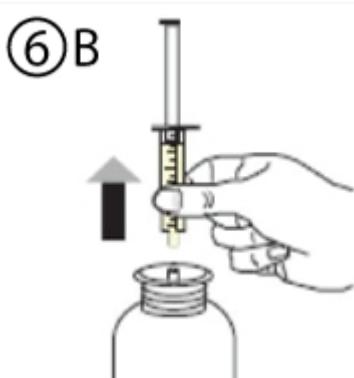

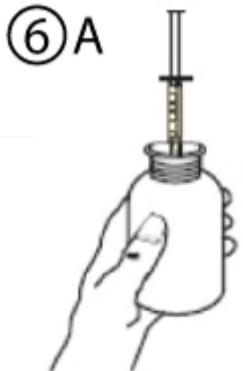

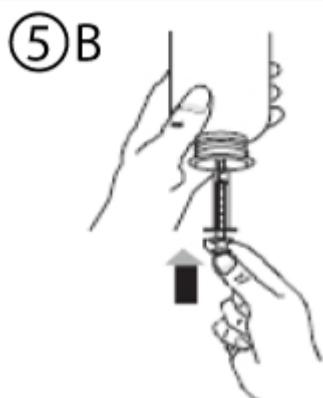

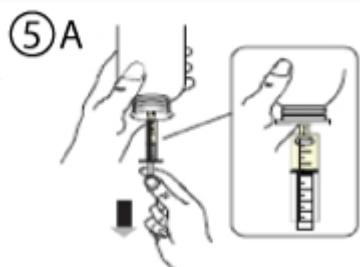

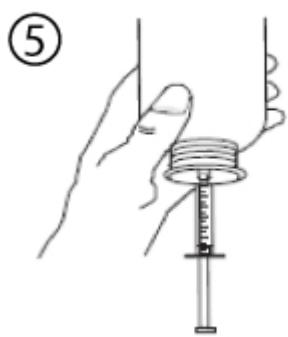

Turn the bottle the right way up (figure 6A). Remove the syringe from the adaptor (figure 6B).

Empty the contents of the syringe in a glass of water or baby's bottle by pushing the piston to the bottom of the syringe (figure 7).

Drink the whole contents of the glass/baby's bottle. Close the bottle

with the plastic screw cap. Wash the syringe with water only (figure 8).

When to take it:

Take KERRON twice a day, once in the morning and once at night.

Take it at about the same time each day.

Taking your medicine at the same time each day will have the best effect. It will also help you remember when to take it.

It does not matter if you take this medicine before or after food.

If you forget to take it:

Contact your doctor if you have missed one or more doses.

Do not take a double dose to make up for the dose that you missed.

This may increase the chance of you getting an unwanted side effect.

If you are not sure what to do, ask your doctor or pharmacist.

If you have trouble remembering to take your medicine, ask your pharmacist for some hints.

How long to take it

Most antiepileptic medicines take time to work, so do not be discouraged if you do not feel better straight away.

Continue taking your medicine for as long as your doctor tells you to.

This medicine helps control your condition, but does not cure it.

Therefore you must take your medicine every day, even if you feel well.

Do not stop taking KERRON, or change the dosage, without checking with your doctor. Do not let yourself run out of medicine over the weekend or on holidays.
Stopping KERRON suddenly may cause unwanted side effects or make your condition worse. Your doctor will slowly reduce your dose before you can stop taking it completely.

If you take too much (overdose):

Immediately telephone your doctor or the Poisons Information Centre (telephone 13 11 26) for advice, or go to Accident and Emergency at the nearest

hospital, if you think that you or anyone else may have taken too much KERRON. Do this even if there are no signs of discomfort or poisoning.

You may need urgent medical attention.

Symptoms of an overdose may include feeling drowsy.

While you are taking KERRON

Things you must do:

Tell your doctor immediately if you notice an increase in seizures.

Tell your doctor immediately if you have symptoms of depression or thoughts of harming yourself.

Tell any other doctors, dentists, and pharmacists who are treating you that you are taking this medicine.

If you are about to be started on any new medicine, tell your doctor, dentist or pharmacist that you are taking KERRON.

Before you have any surgery or emergency treatment, tell your doctor or dentist that you are taking KERRON.

Tell your doctor if you feel KERRON is not helping your condition.

Your doctor may need to change your medicine.

Tell your doctor if, for any reason, you have not taken this medicine exactly as prescribed.

Otherwise, your doctor may change your treatment unnecessarily.

If you become pregnant while taking this medicine, tell your doctor.

Be sure to keep all of your doctor's appointments so that your progress can be checked.

Your doctor will check your progress and may want to take some tests from time to time. This helps to prevent unwanted side effects.

Things you must not do:

Do not give KERRON to anyone else, even if their symptoms seem similar to yours or they have the same condition as you.

Do not give the oral solution to anyone with a fructose intolerance.

It may cause a serious side effect.

Do not take KERRON to treat any other complaints unless your doctor tells you to.

Things to be careful of:

Be careful driving or operating machinery until you know how this medicine affects you.

Children should be careful doing things like riding bicycles or climbing trees.

As with other antiepileptic medicines, KERRON may cause dizziness or drowsiness in some people. This is more frequent at the beginning of treatment or after an increase in the dose.

If you are feeling dizzy or drowsy do not drive, operate machinery, or do anything else that could be dangerous. Children should not ride a bike, climb trees or do anything else that could be dangerous if they are feeling dizzy or drowsy.

Be careful when drinking alcohol while taking this medicine.

Combining KERRON and alcohol can make you more drowsy. Your doctor may suggest you avoid alcohol while you are being treated with KERRON.

may need medical attention if you get some of the side effects.

Do not be alarmed by the following list of side effects. You may not experience any of them.

Ask your doctor or pharmacist to answer any questions you may have.

If you get any side effects, do not stop taking KERRON without first talking to your doctor or pharmacist.

Tell your doctor or pharmacist if you notice any of the following and they worry you:

- dizziness;
- feeling weak;
- headache;
- common cold;
- upset stomach;
- diarrhoea; or
- feeling tired, drowsy or sleepy.

The above list includes the more common side effects of your medicine. They are usually mild and short-lived.

Tell your doctor as soon as possible if you notice any of the following:

- mood changes such as depression, nervousness, aggression, anger, anxiety, confusion, hallucination, irritability;
- feelings of depression;
- upper respiratory tract infections; or
- weight loss.

The above list includes serious side effects that may require medical attention.

If any of the following happen, tell your doctor immediately or go to Accident and Emergency at your nearest hospital:

- thoughts of harming yourself;
- more frequent or more severe seizures;
- shortness of breath;
- wheezing or difficulty breathing;

- swelling of the face, lips, mouth, throat or tongue or other parts of the body; or
- rash, itching or hives on the skin.

The above list includes very serious side effects. You may need urgent medical attention or hospitalisation.

Tell your doctor if you notice anything else that is making you feel unwell.

Other side effects not listed above may happen in some people.

After taking KERRON

Storage

Film-coated tablets:

Keep your KERRON tablets in the pack until it is time to take them.

If you take the tablets out of the pack they will not keep well.

Keep your tablets in a cool dry place where the temperature stays below 25°C.

Oral solution:

Keep KERRON oral solution in its original bottle until it is time to take it.

If you take the solution out of the bottle it may not keep well.

Keep your oral solution in a cool place where the temperature stays below 25°C and protect from light.

After opening the bottle, the oral solution must be used within 7 months.

You should write the date of opening the bottle on the bottle label, and the discard date.

Do not store KERRON or any other medicine in the bathroom or near a sink. Do not leave it on a window sill or in the car on hot days.

Heat and dampness can destroy some medicines.

Keep it where children cannot reach it.

A locked cupboard at least one-and-a-half metres above the ground is a good place to store medicines.

Disposal

If your doctor tells you to stop taking this medicine or the expiry date has passed, ask your pharmacist what to do with any medicine that is left over.

Ingredients

Active ingredient:
Levetiracetam.

Other ingredients in KERRON tablets include:

- maize starch;
- colloidal anhydrous silica;
- povidone;
- magnesium stearate;
- purified talc;
- 250 mg tablet also contains opadry lue OY-S-30913;
- 500 mg tablet also contains opadry yellow 05F82840;
- 750 mg tablet also contains opadry orange OY-S-33016; and
- 1000 mg tablet also contains opadry white Y-1-7000

Other ingredients in KERRON oral solution include:

- sodium citrate;
- citric acid monohydrate;
- methyl hydroxybenzoate;
- propyl hydroxybenzoate;
- propylene glycol;
- glycerol;
- maltitol solution;
- acesulfame potassium;
- mafco magnasweet 110;
- grape flavor 50147 C; and
- purified water.
