What is in this leaflet

This leaflet answers some common questions about Chloromycetin Eye Drops and Eye Ointment. It does not contain all the available information. It does not take the place of talking to your doctor or pharmacist.

All medicines have risks and benefits. Your doctor or pharmacist has weighed the risks of you using Chloromycetin against the benefits they expect it will have for you.

If you have any concerns about using this medicine, ask your doctor or pharmacist.

Keep this leaflet with the medicine. You may need to read it again.

What Chloromycetin is used for

Chloromycetin Eye Drops and Ointment are topical antibiotic preparations for the treatment of bacterial conjunctivitis. Bacterial conjunctivitis is a highly contagious bacterial infection involving the mucous membrane of the surface of the eye. The common symptoms are the presence of a sticky yellow-white discharge with mucus and pus, a gritty sensation in the eye, irritation and redness of the eye and watery eyes. The infection usually starts in one eye and then spreads to the other. Chloromycetin belongs to a group of medicines called antibiotics.

It works by stopping the growth of the bacteria causing your infection.

Ask your doctor or pharmacist if you have any questions about why this medicine has been prescribed for you.

Your doctor or pharmacist may have prescribed it for another reason.

Chloromycetin is not addictive.

Before you use it

Tell your doctor, optometrist or pharmacist if the following conditions apply to you:

- you have allergies to any other medicines, foods preservatives or dyes.
- you or your family have blood disorders (e.g. anaemia) or problems with bone marrow.
- you have an injury to the cornea.

Eye preparations may stop the healing of the wound.

- you wear contact lenses. Contact lenses should not be worn during the course of Chloromycetin treatment. If you wear hard or soft disposable contact lenses, you can start using them again after completing the course of treatment. If wearing soft contact lenses, you should wait 24 hours after completing a course of treatment before starting to use them again.

Tell your doctor, optometrist or pharmacist if you are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed.

Your doctor, optometrist or pharmacist will advise you of the risks and benefits of using Chloromycetin in pregnancy or while breastfeeding.

When you must not use it

Do not use Chloromycetin if you have an allergy to:

- chloramphenicol
- any of the ingredients listed at the end of this leaflet
- any other similar medicines.

Symptoms of an allergic reaction may include shortness of breath, wheezing or difficulty breathing; swelling of the face, lips, tongue or other parts of the body; rash, itching or hives on the skin.

Do not use Chloromycetin if you wear contact lenses except on medical advice.

Do not give Chloromycetin to children under 2 years of age, unless on medical advice.

Do not use Chloromycetin after the expiry date printed on the pack or if the packaging is torn or shows signs of tampering.

If it has expired or is damaged, return it to your pharmacist for disposal.

If you are not sure whether you should start using this medicine, talk to your doctor or pharmacist.
If you have bought this medicine without a prescription and without prior consultation from a doctor or optometrist, it is important to check the following list. Speak to your doctor or optometrist if any apply before you start to use Chloromycetin:

• you are allergic to any other antibiotic eye drops or ointments.
• you are using other eye drops or eye ointments.
• you have pain within your eye (rather than just feeling sore or gritty).
• swelling around the eye.
• blurred vision or sensitivity to light.
• limited eye movement.
• abnormal pupil (the black circle in the centre of the eye looks cloudy).
• there is copious yellow-green purulent discharge that accumulates after being wiped away.
• you have injured your eye or there is a foreign body in the eye.
• you have been welding without eye protection immediately before your eye symptoms appeared.
• you have glaucoma.
• you have dry eye syndrome.
• you have had similar symptoms in the past.
• you have had eye surgery or laser treatment in the past six months.
• you have recently travelled overseas.
• you are allergic to any other medicines or any foods, dyes or preservatives.
• you have had surgery (including dental surgery) using a general anaesthetic.
• you feel unwell.
• you have any other medical condition.

If you have not told your doctor or optometrist about any of the above, tell him/her before you start using Chloromycetin.

Taking or using other medicines

Tell your doctor or pharmacist if you are taking or using any other medicines, including any that you get without a prescription from your pharmacy, supermarket or health food shop.

Chloromycetin Eye Drops or Ointment and some other medicines may interfere with each other. These include other eye drops and ointments.

These medicines may be affected by Chloromycetin or may affect how well it works. You may need different amounts of your medicines, or you may need to use different medicines.

Your doctor and pharmacist have more information on medicines to be careful with or avoid while using Chloromycetin.

Chloromycetin Eye Ointment

Apply 1.5 cm of ointment every 3 hours.

How to use them

Wash your hands. Tilt your head back and pull the lower lid away from your eye to make a space. For the Eye Drops, drop the medicine into this space. For the Eye Ointment, squeeze the ointment into this space. Let go of your eyelid and gently close your eyes. Try not to blink. Keep your eyes closed for 1 or 2 minutes to allow the medicine to come into contact with the infection.

When using the Eye Drops, apply gentle pressure to the inner corner of the eye (the tear duct) for approximately 1 minute immediately after placing the drops in the eye. This will reduce the amount of medicine absorbed into the bloodstream or other parts of the body.

To keep the medicine as germ free as possible, do not touch the tip of the bottle or tube to any surface including the eye. After using Chloromycetin Eye Ointment wipe the tip of the tube with a clean tissue.

How to use

Chloromycetin

Follow all directions given to you by your doctor or pharmacist carefully.

They may differ from the information contained in this leaflet.

If you do not understand the instructions on the label, ask your doctor or pharmacist for help.

Do not give Chloromycetin to children under 2 years of age, unless on medical advice.

How much to use

The dose of Chloromycetin may be different for different people. Your doctor or pharmacist will tell you the right amount to use.

Chloromycetin Eye Drops

Place one or two drops in the affected eye(s) every 2 to 6 hours for 2 to 3 days. The interval between doses may then be increased.

When to use them

If the Eye Drops and Ointment are used together for day and night treatment, use the drops during the day and the ointment at night before bed.

Use Chloromycetin Eye Drops or Ointment at about the same time each day.

Using it at the same time each day will help you remember when to use it.

It does not matter if you use this medicine before or after food.

How long to use them

Normally treatment is continued for at least 2 days after the eye appears normal. Do not use for more than 5 days in total except on medical advice.
If the condition worsens or does not get better after 2 days, seek immediate medical advice.

If you forget to use them

If it is almost time for your next dose, skip the dose you missed and instil your next dose when you are meant to.

Otherwise, instil a dose as soon as you remember, and then go back to using your medicine as you would normally.

Do not use a double dose to make up for the dose that you missed. This may increase the chance of you getting an unwanted side effect.

If you are not sure what to do, ask your doctor or pharmacist. If you have trouble remembering to use your medicine, ask your pharmacist for some hints.

If you take too much (overdose)

Rinse your eye with large amounts of water for at least 15 minutes if pain, swelling, excessive tears or an uncomfortable sensitivity to the light is experienced after application of Chloromycetin Eye Drops or Ointment. Contact your doctor or pharmacist if symptoms are still present after thoroughly rinsing your eye.

Immediately telephone your doctor or the Poisons Information Centre (telephone 13 11 26) or go to Accident and Emergency at the nearest hospital if you think an infant or young child may have accidentally swallowed Chloromycetin Eye Drops or Ointment.

Do this even if there are no signs of discomfort or poisoning. The child may need urgent medical attention.

Contact your doctor or the Poisons Information Centre (telephone 13 11 26) if you or another adult accidentally swallows Chloromycetin Eye Drops or Ointment. It is a good idea to do this even if there are no signs of discomfort or poisoning.

While you are using Chloromycetin

Things you must do

Use Chloromycetin Eye Drops or Ointment exactly as your doctor or pharmacist has prescribed.

If the symptoms of your infection do not improve within a few days, or if they become worse, tell your doctor or pharmacist.

Stop using Chloromycetin and tell your doctor or pharmacist if irritation occurs or you experience an allergic reaction.

If you are about to be started on any new medicine, remind your doctor and pharmacist that you are using Chloromycetin Eye Drops or Ointment.

Tell any other doctors, dentists, and pharmacists who treat you that you are using Chloromycetin.

Things you must not do

Do not use Chloromycetin for longer than your doctor or pharmacist has prescribed.

Do not use Chloromycetin Eye Drops or Ointment to treat any other complaints unless your doctor or pharmacist tells you to.

Do not give your medicine to anyone else, even if they have the same condition as you.

Do not stop using your medicine or lower the dosage without checking with your doctor or pharmacist. If you do not complete the full course prescribed by your doctor or pharmacist, the infection may not be completely cured. The bacteria may grow again and your symptoms may return.

Things to be careful of

Be careful driving or operating machinery until you know how Chloromycetin affects you. This medicine generally does not cause any problems with your ability to drive a car or operate machinery. However, as with many other medicines, Chloromycetin may cause tiredness in some people. If you are affected, do not drive, operate machinery or do anything else that could be dangerous.

Side effects

Tell your doctor or pharmacist as soon as possible if you do not feel well during or after using Chloromycetin Eye Drops or Ointment. Chloromycetin helps most people with eye infections but it may have unwanted side effects in a few people.

All medicines can have side effects. Sometimes they are serious, most of the time they are not. You may need medical attention if you get some of the side effects.

Ask your doctor or pharmacist to answer any questions you may have.

Do not be alarmed by the following lists of side effects. You may not experience any of them.

Tell your doctor or pharmacist if you notice any of the following and it worries you:

- temporary itching, burning or stinging eyes
The above side effects are usually mild and short-lived.

**Tell your doctor or pharmacist as soon as possible if you notice any of the following:**

- eye soreness, redness or swelling that was not present before treatment or that worsens after treatment
- skin rash, itching or swelling
- fever
- unusual tiredness, weakness, bleeding or bruising more easily than normal

The above list includes very serious side effects, which may require medical attention. Serious side effects are rare.

**If any of the following happen, tell your doctor immediately or go to Accident and Emergency at your nearest hospital:**

- allergic reactions including fever, rash, swelling of the face, lips, mouth or sore throat that may cause difficulty in swallowing or breathing, shortness of breath, swelling of the hands, feet or ankles.

The above list includes serious side effects. You may need urgent medical attention or hospitalisation. Other side effects not listed above may also occur in some people.

**Tell your doctor or pharmacist if you notice anything that is making you feel unwell during or after treatment with Chloromycetin.**
