

ARENA Update

The ARENA availability module has been updated with the aim to collect higher quality data

When your aircraft is made available:

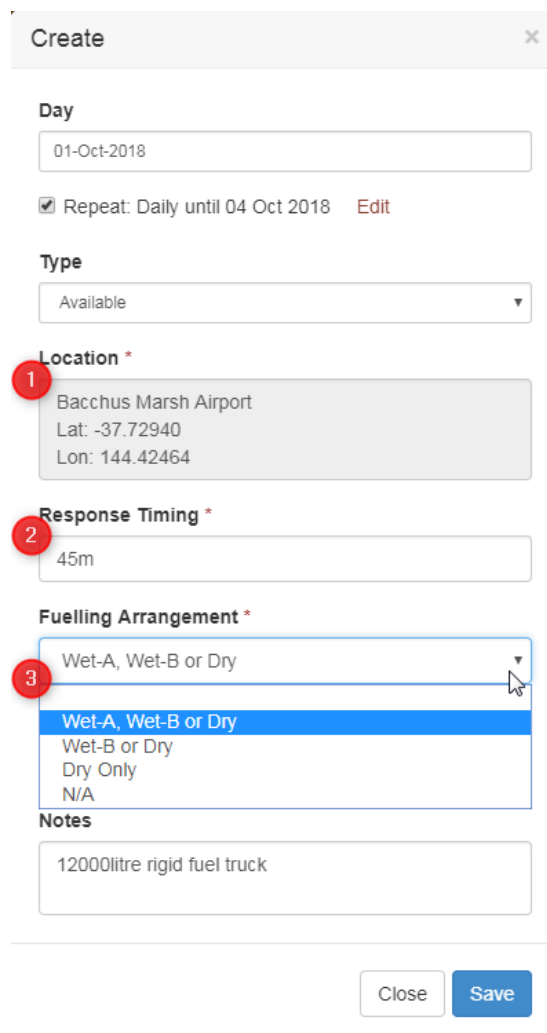

1. The **Location** field is now mandatory
2. The **Response Timing** field is now mandatory
3. There is a new mandatory **Fuelling Arrangement** field

In the **Fuelling Arrangement** field, set the highest level of refuelling you are making available with your aircraft.

- **N/A** not applicable eg electric drones
- **Dry** no refuelling, Agency supplies and pays for fuels
- **Wet-B** Operator pays for fuel, no mobile fuel truck
- **Wet-A** Operator pays for fuel, **fuel truck available**

When making a fuel truck available under Wet-A fuelling arrangement use the Notes field to include details of your fuel truck.

When your aircraft is dispatched to a fire or incident please remember to confirm with the dispatching agency what fuelling arrangements you are being dispatched under and what pricing applies.
