HOT WEATHER GUIDELINES

During the summer months Netball Victoria commonly receives requests from affiliates looking for guidance on things like:

- When should our games be modified or cancelled?
- Should our training be modified or cancelled?
- When is it safe to play netball or be physically active in the heat?

To help organisations, coaches and other individuals when conducting sport in hot weather, Netball Victoria has produced this revised set of guidelines. These new guidelines are based on the latest research as well as the expertise of Sports Medicine Australia's (SMA) medical and scientific members.

These guidelines are **not binding**, but Netball Victoria reminds all parties that they must act responsibly. We encourage a common sense approach and consideration of the comfort and well-being of all individuals including participants and officials. There are many factors to be considered when clubs and associations are contemplating modifying, postponing or cancelling games or training. Affiliates need to be aware of the difficulty of settling "one size fits all" guidelines in this area so encourage you to undertake appropriate risk management in your particular geographical circumstances.

Over the past three years, Vicsport, in partnership with the Australian Centre for Injury in Sport and Its Prevention, has developed a suite of new resources to assist sport and recreation organisations to mitigate against the risks of exertional heat illnesses in sport.

This document contains information and evidence-based advice about heat related illnesses, risk factors and mitigation strategies. Vicsport has also published supportive resources including fact sheets and posters. These resources are designed for the Victorian sport sector and may be used to inform and create risk plans, event plans and emergency management plans.

VicSport – Hot Weather Guidelines for Sport and Active Recreation

Informed by evidence and advice from the Australian Centre for Research into Injury in Sport and its Prevention, the guidelines contain information about:

- Trends in extreme heat
- Heat illness conditions including signs and symptoms
- Risk factors affecting sport and active recreation
- Mitigation strategies
- Advice on communicating modifications to activities

[Click here to download the guidelines.](#)

FACT SHEETS AND POSTERS - A range of fact sheets and editable posters have been developed to assist sport organisations to promote awareness of exertional heat illnesses and actions to take if symptoms of heat illness present during sport activities.

Heat Health Alerts

The Department of Health and Human Services heat health alert system notifies local governments, departmental program areas, hospitals, and state-wide or major metropolitan health and community service providers of forecast heatwave conditions that are likely to pose an increased risk to human health.

The department has identified temperature thresholds for Victoria above which heat-related illness and mortality increases substantially.

Throughout summer, the department monitors the [Bureau of Meteorology](#) seven-day forecast maximum and minimum temperatures. When the heat health temperature threshold is reached in a specific weather forecast district, the department issues a heat health alert.

Sign up to receive heat health alerts [here](#).

VicEmergency

VicEmergency provides updates and warnings for incidents related to fires, floods, storms and other environmental disasters. Sport organisations should be ready to refer to the [website](#) or download the [smartphone app](#) so that relevant information can be obtained in the event of environmental emergencies which threaten the health of participants.
