Repointing your domain

If your club has a registered domain name and would like this domain to point to your new revSPORT website this guide will assist you with the process.

The following steps outline how to repoint your domain:

1. After logging in to your revSPORT portal, click **account** in the top right of the admin portal.

2. Then click on **Upgrade Account**

3. Click on **Domain Link/SSL**

4. Complete the steps on the following screen to commence the process to repoint your domain. To repoint a domain does incur a fee which is set by revSPORT and will need to be processed at the same time.

What happens next?

Once you have completed the payment form you will receive an email from revSPORT which includes the instructions to begin repointing your domain from within your Domain Hosting account (GoDaddy, Crazy Domains, Net Registry, Melbourne IT etc).

Once you have made the changes required you will need to notify revSPORT that you have completed this step via a support ticket in your portal.

revSPORT will then make the last few changes and your website will be live on your domain. Please note: the time your website takes to be live may vary from 1 hour to 24 hours.
