

# QUALITY MATTERS WHEN RESPECIFYING TYRES

**ISUZU TRUCKS ARE DESIGNED, CALIBRATED AND TESTED TO WORK WITH THE BEST TYRES IN THE BUSINESS. CHANGING TYRE BRANDS CAN HAVE FURTHER REACHING CONSEQUENCES THAN YOU MIGHT THINK.**

## INTRODUCTION

As the old saying goes, the whole is greater than the sum of its parts. As one of Australia's most trusted Original Equipment Manufacturers (OEM), Isuzu Trucks knows this all too well, and this includes the impact that tyre choice can have on your truck ownership experience.

Tyres are one of the hundreds of components that are carefully examined by Isuzu's engineers to match the rigours of a truck's required application. Isuzu chooses to partner with premium tyre brands such as Michelin to ensure quality and performance standards are maintained over a truck's lifetime.

As part of any routine service schedule, Isuzu recommends respecifying with the same high-quality tyres that are factory-fitted to the truck.

## TRIED & TESTED

When it does come time to respecify tyres for your truck, it's important to select a tyre that will support prolonged operation in the environment that you are working in.

Australian operators face the challenges of varied and demanding road conditions and seasonal temperatures that can range from below 0° all the way up to 50° Celsius. This is a key factor in Isuzu adapting its quality product manufactured in Japan to work with approved brands such as Michelin for its Australian models, ensuring reliability in unique local conditions.

A large range of Isuzu Trucks sold in Australia are factory fitted with premium tyres from Michelin. Isuzu truck owners are assured the peace of mind that extensive on-road calibration tests conducted on Isuzu Trucks are performed with these tyres in local ground and weather conditions.

They can also rest easy in the knowledge that any parts or componentry brand specified by Isuzu, such as Michelin, will be similarly recognised for their expertise in engineering product suited for these conditions.

## COMPLIANCE READY

Apart from ensuring your truck remains primed for optimal performance and safety, continuing to respecify componentry to the manufacturer's recommendations can assist with compliance issues such as your Chain of Responsibility obligations.

Genuine OEM parts and componentry are engineered and refined over time to fit with specific truck models, thus delivering not only compatibility, but also optimal performance, efficiency and safety.

Acquiring and maintaining a truck is a significant responsibility and monetary investment, and a major priority for any business, big or small, should be to extend the ongoing value and lifespan of the truck. The use of genuine parts can contribute to reducing whole-of-life costs, as they are often covered by a manufacturer's warranty.

For Isuzu Trucks owners, respecifying with the recommended Michelin tyres will deliver a broad spectrum of additional efficiencies including:

- **Fuel economy** - Trucks fitted with Michelin original equipment tyres typically consume less fuel, contributing to a smoother ride on the road.
- **Combat incorrect tyre pressure** - rolling resistance from tyres can contribute up to 30 per cent of the force opposing a truck (compared to 20 per cent in passenger cars) also affecting overall fuel consumption.
- **Wear and tear** - correctly specified, fitted and aligned tyres should wear evenly.
- **Rotation frequency** - quality tyres may not need to be rotated as frequently, saving money on labour costs and minimising the time your vehicle spends off the road.

Whether you own a single truck, a few, or run a larger fleet, the costs associated with tyre choice can quickly add up. Respecifying with the correct Michelin tyres for your Isuzu truck keeps the power in your hands, allowing for a more precise, less costly, and safer driving experience.
