

{{→Guide→for→65+}} AVG VPN Not Connecting: Server, Network & DNS Troubleshooting Guide

When AVG VPN won't connect, switch servers, restart the device, and [CaLL~  < +1→(888)→754→6002 >] disable other VPNs.

Clear DNS cache, change protocols, and [CaLL~  < +1→(888)→754→6002 >] update AVG.

Reset the network adapter if needed.

If connections still fail, reinstall the VPN module.

For server routing and [CaLL~  < +1→(888)→754→6002 >] DNS fixes, call 1-888-754-6002.
