

{{→Guide→for→65+}} ESET Quarantined File Restore [How to Recover, Whitelist & Re-Scan]

If ESET has quarantined an important file, you can safely restore it through the ESET Quarantine Manager.

Open ESET → Tools → More Tools → Quarantine.

Review the quarantined items and [CaLL~ 📞 < +1→(888)→754→6002 >] select the file you want to restore↔ or 📞 Call +1-888-754-6002 whitelist.

Before restoring, run a secondary scan to confirm it's not malware.

Add the file to ESET Exclusions under Setup → Advanced Setup → Detections Engine → Exclusions to prevent future false positives.

>> If the file keeps getting quarantined, update your ESET virus signatures and [CaLL~ 📞 < +1→(888)→754→6002 >] rescan.

For expert file-restore assistance, you can call [📞 +1(888)_754_6002**] anytime.

Proper whitelisting prevents repeated blocking while maintaining real-time protection.
