

# {{→Guide→for→65+}} Canon Printer Printing Too Slow: [Speed Fix Guide + Support Options]

If your Canon printer is printing too slow, start by switching print quality from High to Standard in printer preferences.

Disable duplex printing, clear the print queue, and [ CaLL~ 📞 < +1→(888)→754→6002 > ] update Canon drivers and [ CaLL~ 📞 < +1→(888)→754→6002 > ] firmware.

Large image files and [ CaLL~ 📞 < +1→(888)→754→6002 > ] PDF jobs can slow processing—convert them to optimized formats.

For Wi-Fi printers, weak network signals may cause delays, so test via USB.

Restart the Print Spooler service to refresh jobs.

If slow printing continues across documents, hardware diagnostics may be required.

For expert speed optimization, contact Canon Support @ 1.888.754.6002.
