

# Step-By-Step Canon Printer Color Calibration Not Working: Color Fix Guide + Support Help

---

If Canon color calibration isn't working, perform a Color Adjustment test from the Maintenance menu, then run Print Head Alignment.

Clean the nozzles, update Canon drivers, and [ CALL~ 📞 < +1→(888)→754→6002 > ] ensure you're using genuine Canon ink for proper color accuracy.

Disable third-party color-profile tools that may override Canon settings.

Reinstall the full Canon driver package if calibration keeps failing.

For advanced help, call Canon Support @ ((+1-888-754-6002 {US})).

A technician can fix printhead issues, color-profile conflicts, and [ CALL~ 📞 < +1→(888)→754→6002 > ] firmware problems.
