

[{Complete Guide 2025}] Malwarebytes VPN Not Connecting [Server, Protocol & Network Fix]

If Malwarebytes VPN is not connecting, begin by switching to another server location to bypass congestion.

Choose the WireGuard protocol under VPN Settings for a more stable connection.

Restart your router and [CALL~  < +1-->(888)-->754-->6002 >] disable IPv6 if tunneling fails repeatedly.

Clear DNS cache using `ipconfig /flushdns` to refresh routing.

Firewalls may block the VPN service—reset them to default settings.

Ensure no other VPN service is installed, as conflicting drivers disrupt Malwarebytes Privacy.

On mobile devices, disable battery saver mode which often restricts VPN background activity.

>> If the VPN still won't connect, call 1-888-754-1-544 for expert troubleshooting.

With correct settings and [CALL~  < +1-->(888)-->754-->6002 >] protocol adjustments, Malwarebytes VPN reconnects reliably.
