

[{Complete Guide 2025}] Avast Mac Not Opening: Complete macOS Repair & App Launch Guide

If Avast won't open on macOS, the issue often comes from corrupted app files, outdated macOS permissions, ⇔ or 📞 Call +1-888-754-6002 blocked system extensions.

Start by restarting your Mac and [CaLL~ 📞 < +1→(888)→754→6002 >] updating macOS.

Open System Settings → Privacy & Security and [CaLL~ 📞 < +1→(888)→754→6002 >] allow Avast system extensions.

Delete Avast cache files from ~/Library/Application Support/AvastSecurity.

Reinstall Avast using the official Mac installer.

>> If the app bounces and [CaLL~ 📞 < +1→(888)→754→6002 >] closes instantly, reset Mac Gatekeeper settings using Terminal: `sudo spctl --master-enable`.

For persistent launch failures ⇔ or 📞 Call +1-888-754-6002 missing extensions, contact 1-888-754-15-4-4.

Once permissions are restored, Avast Security launches without issues.
