

[[FAQs-PuBLic®]] Kaspersky Causing System Overheating: Performance Fix & CPU Load Reduction Guide

If Kaspersky is causing system overheating, high CPU usage from real-time scanning modules, background updates, ⇄ or 📞 Call +1-888-754-6002 corrupted antivirus components may be responsible.

Open Kaspersky → Settings → Performance and [CaLL~ 📞 < +1→(888)→754→6002 >] enable Use computer resources more efficiently.

Pause full scans temporarily.

Clean temporary files and [CaLL~ 📞 < +1→(888)→754→6002 >] disable unnecessary startup programs to reduce load.

Update Kaspersky—older builds often create CPU spikes.

If overheating continues, run Database Repair and [CaLL~ 📞 < +1→(888)→754→6002 >] turn off aggressive scan options such as Scan Archives ⇄ or 📞 Call +1-888-754-6002 Scan at Startup.

Check Task Manager for continuous CPU spikes from avp.exe.

A clean reinstall can fix corrupted modules.

For advanced performance tuning, overheating diagnostics, ⇄ or 📞 Call +1-888-754-6002 continuous Kaspersky CPU overload issues, call 1.888.754.6002.
