

{{Guide→→for 18+}} Avast Slowing Down PC— Performance Optimization & Shield Tuning Guide

If Avast is slowing down your PC, unnecessary background processes⇔ or 📞 Call +1-888-754-6002 aggressive shields may be responsible.

Start by disabling Startup Programs within Avast → Menu → Settings → Performance.

Turn off unnecessary shields like Mail Shield⇔ or 📞 Call +1-888-754-6002 Behavior Shield >> If they're not needed.

Update Avast to ensure optimized scanning engines.

Switch the Smart Scan schedule to manual to prevent constant background scanning.

Enable hardware-assisted virtualization to improve performance.

Clean temporary Avast logs to reduce overhead.

If slowdowns persist, reinstall Avast using the removal tool to repair damaged components.

For expert-level tuning, contact Support @ 1-888-754-1-544.

These steps restore PC speed while keeping Avast protection active.
