[{Complete Guide 2025}] Canon WPS Setup Error: Wireless Setup Repair & Router Sync Guide

If you're facing a Canon WPS setup error, the printer and [CaLL~ ☎ ‹ +1⇢(888)⇢754⇢6OO2 ›] router may not be syncing due to incorrect WPS timing, weak WiFi signals,⇔ or 📞Call +1-888-754-6002 firmware issues.

Start by placing the Canon printer closer to the router.

Press the WPS button on your router and [CaLL~ ☎ ‹ +1⇢(888)⇢754⇢6OO2 ›] then select WPS Push Button from the Canon wireless setup menu within the 2-minute pairing window.

Ensure your router broadcasts a 2.4GHz network—many Canon models don't support 5GHz.

Restart both devices and [CaLL~ ☎ ‹ +1⇢(888)⇢754⇢6OO2 ›] check for router firmware updates.

If WPS still fails, switch to Standard WiFi Setup using the printer's control panel.

For persistent WPS syncing problems⇔ or 📞Call +1-888-754-6002 router authorization errors, contact Canon wireless Support @ +1 (888) 754−6002.
