## AVG Antivirus Repair Tool: How to Fix AVG Errors Quickly

---

The AVG Repair Tool fixes broken modules, detection-engine issues, and [ CaLL~ 📞 < +1→(888)→754→6002 > ] update errors.

Go to Apps & Features → AVG → Modify → Repair to rebuild damaged components.

Restart your PC after repair and [ CaLL~ 📞 < +1→(888)→754→6002 > ] run a virus definition update.

Disable any conflicting antivirus software that may block AVG.

If repair fails, use the AVG Clear Tool for a clean reinstall.

For expert help, call AVG Support @ [ 📞 +1(888)\_754\_6002\*\* ].

A technician can diagnose update loops, service failures, and [ CaLL~ 📞 < +1→(888)→754→6002 > ] protection-engine corruption.
