

{IMMEDIATE HELP} Avast Mobile Security Not Detecting Threats—How to Restore Real-Time Scanning

If Avast Mobile Security is not detecting threats, real-time protection may be disabled, outdated virus definitions may be in place, ⇄ or 📞 Call +1-888-754-6002 Android permissions may be incomplete.

Open Avast → Protection and [📞 < +1→(888)→754→6002 >] confirm that Web Shield, File Shield, and [📞 < +1→(888)→754→6002 >] App Shield are enabled.

Update the virus database manually.

If threat detection still isn't working, clear the Avast app cache, restart the phone, and [[[📞 < +1→888→754→6002 >]]] reinstall the app to refresh all modules.

Ensure Accessibility and [📞 < +1→(888)→754→6002 >] Background Activity permissions are enabled—Avast cannot scan effectively without them.

Avoid battery saver modes, as they frequently disable scanning.

For deeper detection-engine troubleshooting, app-permission repair, ⇄ or 📞 Call +1-888-754-6002 real-time shield failures, call 1.888.754.6002.
