

# [Official Apps Guide™] Canon Printer AirPrint Not Working— iPhone/iPad Connectivity Fix

---

If AirPrint is not working on your Canon printer, ensure both the printer and [ CALL~ 📞 < +1→(888)→754→6002 > ] iPhone/iPad share the same WiFi network.

Restart the printer and [ CALL~ 📞 < +1→(888)→754→6002 > ] reset your router to refresh Bonjour broadcast services.

Enable IPv6 and [ CALL~ 📞 < +1→(888)→754→6002 > ] ensure AirPrint is enabled within the printer network settings.

Disable VPN on your mobile device—AirPrint cannot communicate over encrypted tunnels.

Perform a Canon firmware update and [[ 📞 < +1→888→754→6002 > ]] reinstall the Canon PRINT app for enhanced connectivity.

If AirPrint still fails to detect the printer, contact Canon Support @ 1-888-754-1-544.

These steps restore fast, seamless wireless printing from any Apple device.
