

{{→Guide→for→65+}} Canon Printer Won't Install on Mac: macOS Driver Install Fix Guide

If your Canon printer won't install on macOS, start by removing any partially installed drivers from System Settings → Printers & Scanners.

Download the latest macOS-compatible Canon drivers, ensuring compatibility with your OS version.

Reset the printing system to clear corrupted configurations, then reconnect the printer using USB↔ or 📞 Call +1-888-754-6002 WiFi.

Disable VPN and [CaLL~ 📞 < +1→(888)→754→6002 >] security tools that may block driver installation.

If Canon IJ Setup fails↔ or 📞 Call +1-888-754-6002 the printer is not detected, contact expert Support @ 1-888-754-6002 for step-by-step help.
