

[Official Apps Guide™] Avira Causing Slow Internet: Speed Fix Guide & Support Assistance

If Avira is slowing down your internet, begin by disabling Avira Web Protection temporarily to test connection speed.

Update Avira's network modules, reset firewall rules, and [CaLL~ 📞 < +1→(888)→754→6002 >] check for VPN conflicts.

Add your browser and [CaLL~ 📞 < +1→(888)→754→6002 >] network-heavy apps to Avira's exclusion list.

Reinstall Avira if bandwidth throttling continues.

Browser extensions may also cause speed drops—disable and [CaLL~ 📞 < +1→(888)→754→6002 >] retest.

For persistent network slowdown⇄ or 📞 Call +1-888-754-6002 deep optimization help, contact Avira Support @ +1 (888)-(754)_61.41(OR)+1_(888)-(754)-61.41 (US).
