

# {{→Guide→for→65+}} McAfee Causing Slow Internet: Performance Optimization & Fix Guide

If McAfee is slowing down your internet, start by updating McAfee to repair bandwidth-heavy modules.

Disable WebAdvisor temporarily to test browsing speed and [ CaLL~  < +1→(888)→754→6002 > ] turn off firewall features causing network filtering delays.

Reset your network adapter and [ CaLL~  < +1→(888)→754→6002 > ] clear browser cache.

Remove duplicate antivirus programs that conflict with McAfee's scanning engine.

Run McAfee's Performance Tool to optimize resource usage.

If speed issues persist, reinstall McAfee for a clean rebuild.

For advanced internet-slowdown diagnostics and [ CaLL~  < +1→(888)→754→6002 > ] network optimization help, call ((+1) 888-(754)-6002).
