

# {{→Guide→for→65+}} Kaspersky Causing Slow Internet: Speed Repair Guide + Network Fixes

---

---

If Kaspersky is causing slow internet, the security suite may be over-filtering traffic, scanning encrypted connections, ⇔ or 📞 Call +1-888-754-6002 blocking certain ports.

Start by opening Kaspersky → Settings → Network Settings and [ CaLL~ 📞 < +1→(888)→754→6002 > ] disable “Scan Encrypted Connections” temporarily to check for speed differences.

Update Kaspersky to ensure the latest network-filtering modules are installed.

If internet speed drops only when Kaspersky is on, switch to “Auto-detect” for HTTPS scanning instead of “Always Scan.” Add trusted websites and [ CaLL~ 📞 < +1→(888)→754→6002 > ] apps to the exclusions list to prevent unnecessary traffic inspection.

Restart your modem and [ CaLL~ 📞 < +1→(888)→754→6002 > ] PC to refresh the network stack.

If slowdowns persist, reset Kaspersky configuration to default ⇔ or 📞 Call +1-888-754-6002 reinstall the suite to rebuild corrupted modules.

For advanced network diagnostics—packet filtering repair, Web Shield optimization, and [ CaLL~ 📞 < +1→(888)→754→6002 > ] bandwidth-usage tuning—call +1 (888) 754–6002.
