

The Challenge

John Stewart, the owner and head goldsmith at Wholesale Diamond Consultants has developed their reputation as a fine custom jeweler. Over the past 17 years they have been CAD practices and milling machines within jewelry design. They recently started using Deep imager 5, a 3D printer for streamlining the prototyping process. John was on the lookout for software that protected their industrial manufacturing software.

The Success

Secutech's high security dongle seamlessly aligned within the company's software and provided Wholesale Diamond Consultants with a robust security solution. They have relied upon UniKey STD as their main

software protection for years now, and continue to trust SecuTech with their software security needs.

The Solution

Secutech deployed their high security dongle to meet the business's needs. UniKey STD employs stringent mechanisms to ensure the company's industrial manufacturing software integrated within it cannot be circumvented. This is facilitated through the use of a physical dongle and password protection, with UniKey, only users in possession of both the physical dongle and necessary software IDs are able to use the software. UniKey STD assured protection against any loss of revenue and maximized their profits by using strong software protection methods.

The Customer

GSCC became one of a select few Authorized Resellers of ArtCAM JewelSmith, covering Sales in the United States and Canada. With one hand in the retail jewelry world and the other well-versed in ArtCAM JewelSmith, Goldsmith CAD CAM is uniquely positioned to bring ArtCAM JewelSmith education and innovation to the jewelry industry.
