

The Challenge

Bosch is a company that since it was founded has been characterized by its immense innovative drive. Bosch was seeking out strong authentication and smart-card technology to integrate within their eBike systems. They required a dongle that provides strong authentication, optimizes their efficiency and facilitates certain storage certifications.

The Success

The implementation of UniToken Pro at Bosch, provisioned for their requirements and provided them with a powerful verification solution. After viewing the success of UniToken within the eBike systems, other applications for its use became apparent.

The Solution

SecuTech's driverless smart card based UniToken pro was deployed to meet Bosch's data security needs. UniToken is a USB device that augments the functionality of UniKey with the addition of the sophisticated smart card that guarantees the highest protection of data. Coupled with onboard data encryption within the device itself, entirely eliminates all security vulnerabilities, making Bosch's sensitive data almost tamper proof. The smart card technology allows for highly robust authentication and verification solutions. UniToken reduces password administration costs, losses from data breaches, and provides multiple flexible solutions in one powerful platform.

BOSCH

The Customer

Robert Bosch GmbH, or Bosch, is a German multinational engineering and electronics company headquartered in Gerlingen, near Stuttgart, Germany. It is the world's largest supplier of automotive components measured by 2011 revenues.
