

Murray Street Upgrade Stage 6 Project

Key Features of the Project

The Project will generally follow the same lane configurations and turning movements.

The key features include:

- Upgrading 3 intersections - Tenth / Seventh Street, Julian Terrace and Murray Street South.
- Formal pedestrian crossing facilities safe crossing.
- On-road dedicated cycling lanes (where space permits).
- Raised medians and new line marking and signage.
- Reconstruction of footpaths & road pavement, and upgrades to street lighting.
- Landscaping including low level plants, shrubs and trees.

PEDESTRIAN RAMP

SIGNAL LANTERNS

Design & Environmental Guidelines

In addition to providing a safer and functional transport system, the project will add character and amenity to the area.

Design Guidelines:

- Produce a functional and well-designed road layout consistent with previous stages.
- Create a safe and positive travel experience for traffic, pedestrians and cyclists, and an environment that maintains good access to surrounding areas.
- Reinforce the character of the local area.
- Achieve environmental sustainability through design and implement streetscape opportunities (landscaping and paved areas) where possible.
