

The main functions of all the Morey's range of products is to reduce friction and encourage **more efficient combustion thereby less emissions**.
The more efficiently the Diesel engine combustion process takes place the less particulate (soot) is produced. By this definition alone, Morey's is ideally suited to work on a system with a particulate filter and will actually enhance the life of the filter!
Now thirty years in New Zealand, Morey Oil South Pacific's products have an excellent track record around the country and overseas for amongst other things emission reduction. Enclosed are some articles that may be of interest to you

CO HC **DPM** NO_x SO₂

Diesel particulate matter (diesel)
