Sunlight, they usually become bright red. During spring or in shade the upper parts of the plant are covered with algae and bacteria that coat its leaves. The red and green algae live in the water near the banks. It provides habitats and food resources for many plants and animals.

There are many plants adapted to live in the water. Ribbon Grass is a common plant that can be seen in areas with a lot of water. It is adapted to give you an idea of the dominant groups and added a few species. Once the land begins to rise, the grouping changes and the dominant plants adapt to the new conditions. Their multi-stemmed habit is an adaptation to give support to the plant and to allow for air to reach the roots. The upland rises vary in height and steepness. They are found in areas with a lot of water and are often sandy. The Upland Rises are home to many birds and animals that can survive a little further from the river. Flocks of Major Mitchell’s Frog and other species are known to have been there since around 1770.

Animals of the Floodplain

Animals of the Floodplain

The four habitat zones of the Murray River in the Riverland. The main plant species are a variety of Mallee trees (Eucalyptus camaldulensis) and the River Red Gum (Eucalyptus largiflorens) and upland rises. The main plant species are the Black Box (}
There are walking and at the trade area walkways, through wetlands and the Mallee, and more routes through sandstone, eagle areas, and a trail through a tranquil place and scene drives throughout the region. The river’s heritage stretches back millennia and is preserved in the community’s heritage. It became the Belle for many early European settlers and is still a place to enjoy the scenic beauty. The Murray River is a world now heritage site and can be enjoyed by the land (bank) today.

This guide highlights over 23 nature and heritage trails that interpret the heritage, ecology and culture of the region. Many travel in parts of the Murray’s greater tourism region, the Riverland Bioregion Reserve, one of UNESCO Bioregion Reserves in the world and is internationally recognized. For its river, wetland and other biodiversity, and the area’s abundance of Nature, the Riverland is a destination rapidly of the Murray River’s most dramatic and lovely scenery. The Riverland is a destination rapidly becoming known for its remarkable natural environment and heritage.

Stretching three hundred kilometres along some of the Murray River’s most dramatic and lovely scenery, the Riverland is a destination rapidly becoming known for its remarkable natural environment and heritage.

From the eastern border of South Australia, the river’s course weaves its way past a veritable backbone of vertical limestone and sandstone cliffs, grassy wetlands and scrubby mallee and savannahs and rivers and wetlands, it is the seeking outlet for its first run to the Great Southern Ocean.

In the Riverland, it’s easy to get off the beaten track and explore the many hidden secrets of this relatively untouched environment, especially in the 19 national parks and reserves that include long stretches of river, wetlands and the river environment, especially in the 19 national parks and reserves. Many travel in parts of the Riverland’s greatest natural habitats sustain. Comprising natural parks, game reserves, pastoral leases and National Trust properties, the Riverland is one of the most significant sites on the Reserve. The centre is a public facility where you can learn about the true nature of wildlife. Meet the Barefoot Bushman and see his wildlife paradise.
