

# Epidural Positioning Device (EPD)

**The Epidural Positioning Device commonly known as the EPD, is a revolutionary device for positioning patients safely and securely during epidural procedures.**

- Removes strain and injury risk to staff
- Provides patient comfort with less invasion of their personal space compared to traditional positioning methods
- Facilitates correct patient positioning by encouraging cervical, thoracic and lumbar flexion to maintain a solid and stable position.

With the use of the positioning device, you will increase efficiency in operating rooms, labour and delivery suites, pain centres and any other facility/department where epidurals and spinals are performed.

**We're here for life.**

# The Features of the Epidural Positioning Device (EPD)
