

STELLAR XL SURGICAL LIGHTS

PRODUCT BROCHURE

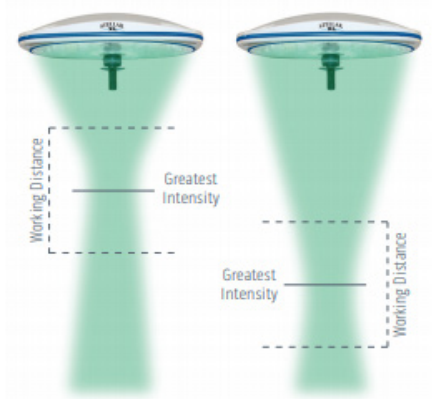

High Value Surgical Lighting with High-Tech Capabilities

Well-suited for any surgical application, the Stellar XL light delivers advanced focusability and optimal shadow control to the operating room. The Stellar XL offers the ideal balance of features and value- whether updating outdated technology or outfitting a new space.

Hand Controlled Focus Capability

Featuring a 27" range of total focusable depth, the Stellar XL's focal point can be easily fine-tuned with the centre sterile handle- without moving the lighthead itself.

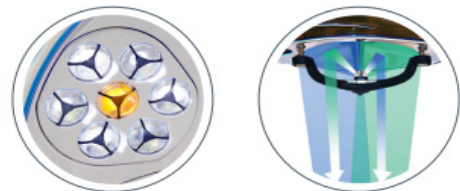

- Set and forget the lighthead at a specific height
- Extend the working distance without moving the lighthead
- Reduce risk of contact with the lighthead or impeding line of sight to staff or displays.

Vertically Segmented Reflector Design (VSRD)

Each of the high-intensity LED is suspended upward-facing in its cradle, allowing the vertically segmented reflector (VSRD) to redirect overlapping rays down to the surgical field. The result is 2000+ beams of light that converge into a continuous column, leading to:

- A crisp, homogeneous spot
- Excellent shadow reduction
- Hidden LEDs that eliminate glare
- Improved thermal control
- A cool, comfortable working environment

True Focus Adjustment

Vertically Segmented Reflector Design

Suspended LED System

Stellar XL Surgical Light Features

Ideal for Any Application

Available in single, dual or triple lighthead configurations and fully compatible with Skytron booms, the Stellar XL is adaptable to many clinical settings.

Perfect For

- Upgrading outdated technology
- Outpatient Surgery Centres
- General Operating Rooms
- C-Section Suites
- Labour and Delivery Suites
- Emergency Departments
- Intensive Care Units
- Procedure Rooms

Also available on Mobile Stand

Differentiating Features

- Natural warm colour temperature provides white light for high intensity applications
- 27" range of total focusable depth
- 24" diameter lighthead
- 360° rotation on all axes permits unmatched flexibility and positioning
- Lightweight polymer housing permits easy manoeuvrability .
