

LASH LIFT VS LASH CURL

NEW LASH LIFT

Lift up even the shortest lashes

LASH CURL

For a Natural Curl on longer lashes/U shape

Both results last up to 6 weeks

Longer shelf life

Date of expiry:

Lash Perm Solution (1):

2 months after opening

Neutraliser Solution (2):

2 months after opening

Glues: 3 months after opening

Close the tube immediately after the treatment

Note the opening date on the tube.

Super Quick Processing Time:

8 minutes Lash Perm Solution (1)

5 minutes Neutraliser Solution (2)

2 minutes Tinting after treatment

Great, thicker looking lashes in just 13 minutes

Colour lashes immediately, shorter processing time of 2 minutes

LIFT GLUE

Specifically formulated to be used with the reusable silicone lift pads
Clear in colour

CURL GLUE

Specifically formulated to be used with the curl rollers
Latex emulsion
Milky white in colour

Both products form the lashes and tinting can proceed immediately

Exceptional care formula with Collagen & Cysteine!

The ingredients pamper the lashes during the treatment and let them appear groomed and full.

Collagen: Belongs to the structural proteins found most often in the human body. Collagen wraps the hair, binds moisture and prevents it from drying out. Therefore the water-soluble Collagen-Hydrolysate is often used in shampoos or conditioners as it makes combing of wet hair easier. It makes the hair smoother and appears to add volume.

Cysteine: An amino acid that is significant for the hair structure. It protects and strengthens the sensitive hair roots and is responsible for the development of keratin which supports hair growth.

IMPORTANT INFORMATION:

LashPerm/Lift, Neutraliser: 3,5 ml. Best used before the end of (MMYY); see tube fold. After opening: 2 months.

Always close the tube immediately after use. Write date opened on tube.

Lift Glue: 4 ml. Best used before the end of (MMYY); see container. After opening minimum: 3 months.

Shake before using. Always close the container immediately after use.

Store products in cool and dark place. Always clean cosmetic brushes and cosmetic dishes immediately after use with RefectoCil Saline Solution.

Best used before the end of / Batch number: see container.

ATTENTION: For professional use only. Avoid contact with eyes. Rinse immediately if product comes into contact with them. Wear suitable gloves.

LASHPERM/LIFT SOLUTION: Contains ammonia.

NEUTRALISER: Contains hydrogen peroxide.

13
MINUTES!

EYELASH LIFT

**For longer and thicker looking lashes in just 13 minutes!
The effect lasts up to 6 weeks.**

RefectoCil Eyelash LIFT lifts lashes and creates an intense, wide-eyed look. The LIFT makes your natural lashes look significantly longer and thicker. Unlike RefectoCil Eyelash Curl, where the lashes are given a U-shaped curl, Eyelash LIFT lifts the lashes up. The unique formula containing collagen & cysteine works in JUST 13 minutes. The specially developed lift pads, made in Germany, fit along the curvature of the lid perfectly, are available in 3 sizes, and can be used up to 100 times. You can tint your lashes immediately after the lift treatment.

Allergy test: an allergy test before the treatment is highly recommended. Apply a small amount of both lotions in 2 separate areas with a cotton bud to your elbow or behind your ear. Allow to dry and keep the area unwashed and uncovered for 24 hours. If your skin is irritated, do not use the product.

1. PREPARATION

Always remove contact lenses. Clean the eye area with RefectoCil Eye Make-Up Remover and then degrease the eyelids and lashes with RefectoCil Saline Solution. To make things easier, you could place RefectoCil silicone pads (available separately) over the bottom lashes to cover them. This ensures that you only secure the top lashes to the lift pad later on.

2. SELECT LIFT PAD

The shorter the lashes and the more lift effect the client requires, the smaller the pad size.

S: strong lift effect; especially for short lashes

M: natural lift effect; for normal lashes

L: subtle lift effect; for very long lashes

3. POSITION LIFT PADS

Apply sufficient lift glue to the back of the lift pads - allow to dry for a short time - approx 15 seconds. Hold the eyelid taut with your fingers and position the lift pad at the edge of the lid as close to the lash line as possible.

4. SECURE LASHES

Apply some lift glue to the domed area of the lift pads - allow to dry for a short time - approx 15 seconds. Secure the top lashes with the rosewood stick using a sweeping upwards motion. Do small section of lashes at a time. Swipe the lashes evenly along the lift pad, keeping them straight.

If some lashes are crossed, carefully release and re-secure them. If lashes are stubborn or keep coming loose, apply some more RefectoCil Lift Glue and re-secure the lashes. When all lashes are stuck straight, ask the client to open her eyes. You can then see if any of the bottom lashes are stuck to the lift pad. If they are, carefully remove them with the rosewood stick to ensure that only the top lashes are lifted.

5. APPLY LASH PERM/LIFT SOLUTION

Place a pea-sized amount of RefectoCil LashPerm/Lift Solution (Tube 1) into the RefectoCil Cosmetics Bowl No 1.

Using the RefectoCil Cosmetics Brush No 1, apply a strip of RefectoCil LashPerm/Lift Solution (Tube 1) to the lash line in dabbing motion applying to a section at a time. Allow to work for: 8 minutes processing time. Then, wipe off the LashPerm/Lift Solution with a dry cotton bud.

6. APPLY NEUTRALISER

Place a pea-sized amount of RefectoCil Neutraliser (Tube 2) in the RefectoCil Cosmetics Bowl No 2.

Using the RefectoCil Cosmetics Brush No 2, apply a strip of Neutraliser (Tube 2) to the same area where you applied LashPerm/Lift Solution (Tube 1). Allow to work for: 5 minutes. Then, wipe off the Neutraliser (Tube 2) with a dry cotton bud if tinting after if not use a wet cotton bud..

7. COLOUR LASHES

Re position the silicone eye pads to enable tinting of the lower lashes then apply tint to lower lashes first as will require a longer processing time.

The lashes can now be tinted with RefectoCil Colour onto the lift pads. It only takes 2 minutes to work! Then, remove the tint with a damp cotton pad.

To avoid stains on the lift pads: max. 2 minutes application time. Rinse pads immediately after use.

8. REMOVE LIFT PADS

Wipe the pads several times with a damp cotton pad until the moisture dissolves the glue. If needed, gently wipe up and down until the glue is completely removed. Then hold the lid taut as you remove the lift pads, starting from the outside.

TIPS & HINTS

- * Choice of lift pad is most important.
- * Make sure that you use the right lift pad. Lashes must cover the whole pad. If they are too short and end in the middle (thickest part of the pad use a smaller pad.
- * If the curve of the eyelashes is too strong, the selected lift pad was too small or the application time too long. Select a larger lift pad and repeat the process using half the application time.
- * The lashperm/lift & neutraliser solution should be applied starting from the middle going down to the lower part of the lashes. Leave the tips completely uncovered.
- * If the curve of the eyelashes is too weak reasons could be: application time too short (with LashPerm or Neutraliser), the lift pad is too large, or eyelashes not cleansed correctly.
- * Apply some lift glue to the first part of the pad and also on to the first part of the lashes. Wait for 15 seconds. Then fix the first part. Repeat this section by section until all lashes are fixed. Wait until the glue is dry before applying Lashperm/lift solution.
- * If some individual lashes come off the pad during the treatment, wipe off the solution, use some more lift glue, wait again for 15 seconds and fix the lashes. Then reapply solution to that area.
- * If not tinting after application use a damp cotton bud to remove neutraliser and lift pads.
- * No restrictions on showering etc after treatment.
