

ABN 25132474189

Bonethane is a high heat Polymer Splashback and Wall Panel which comes with GRIPTEK backing, a barrier application which controls colour consistency, delaminating and imperfections within the wall or adhesives applied to the backs of sheets. Unlike conventional coloured Acrylics, Bonethane does not split or crack when cutting, drilling or planning & is equipped with self extinguishing properties. https://youtu.be/icl9VoH0_Vs

With Bonethane Premium Splashbacks and Wall panels there is no need to coat your walls a neutral colour prior to install, making your installation experience and process 38% faster than Acrylic install methods.

Bonethane is UV weather worthy available in any solid colour, metallic and digitally printed. Bonethane is suitable for showers, Kitchens, Bathrooms, External Wall Panels, Feature Walls & Signage, which is Graffiti proof. <https://www.youtube.com/watch?v=DqFvMjx2jqY>

Dwellings suffering movement in their foundations benefit from Bonethane on their walls as nothing like its Acrylic, Tile and Glass comparisons, prove praiseworthy in performance and staying power. Bonethane will not crack but bow forward allowing time to remove the substrate from the wall, addressing the wall area and replacing Bonethane without the limitations of fracture or rupture like Acrylic, Tiles & Glass.

Additional power cut outs can be applied on your wall by drilling through the face of the sheet without damage to the Bonethane sheeting.

The flexibility in cutting, crafting, customising, heat absorption and any colour process allows Bonethane Technologies to lead in Innovation. What is more ISPS Innovations are the first Polymer splashback in the market that can make our digital printed splashbacks totally water proofed with GripTek™ technologies, locking in the digital image & protecting from water damage, nothing like the vinyl wrap process which is open to many misrepresentations in performance limiting warranty. This makes Bonethane perfect for signage and luxury displays.

Another first from ISPS Innovations is the recycling of Bonethane Polymers into Bonethane10, see our tablet & projector screen stands suitable for IPAD and Android devices. Our stands also house our rear screen projector screens widely used in board rooms, schools and events. Bonethane Premium carries product of Australia logo. For more information on our innovative range call ISPS Innovations. We supply nationally all over Australia.
