

## FABRICATION & WELDING SERVICES

At Kerr Engineering we have extensive experience fabricating a range of solutions large and small for our clients, and the skills available to ensure we can deliver your project quickly and efficiently.

We have the capability and flexibility to fabricate and assemble anything from small one-off items through to major structures and batch manufacturing. This also extends to reconditioning and refitting equipment where we have an extensive portfolio of completed projects for mining services, general industrial use and offshore applications, as well as customised storage solutions.

## FABRICATION & WELDING SERVICES

We also have very comprehensive quality control procedures covering our welding and fabrication. Apart from our **ISO 9001 : 2008 – Quality Management System** accreditation we are also **ISO 3834.2 : 2008 Welding Quality Assurance System** accredited.

Additionally all of our welding is also completed to **AS/NZS 1554.1–6, & ASME IX** Welding Codes specification, so you can be confident that the highest levels of workmanship will be maintained.

Our Welding & Fabrication Department also can provide a range of supporting services including Weld Testing & Inspection, provision of Coded Welders, Welding Procedures, Welding Qualifications and Comprehensive Reports with full traceability.

We can also coordinate a range of coating services with our technical partners.
