EProducts and EBuilt PENETRATION SEAL
10 mm – 75 mm & 80 mm – 170 mm

Installation Guide

Installation of the product supplied by E Built NZ Limited must be completed by competent trades people in accordance with the Technical Literature.

Ensure the surfaces are clean, dry and free from any contaminants such as dust, grease, etc. that may cause loss of adhesion.

The appropriate diameter must be used and the collar extension can be trimmed to ensure the best fit around the pipe or service penetration.

Slide the Penetration Seal over the pipe or conduit until achieves a tight fit but ensure there isn't excessive pressure. There must be a tight fit but, should not be excessively forced over the pipe or service penetration.

Remove the backing release film, push firmly with your hand or a folded cloth against the underlay to ensure full adhesion.

E Built Penetration Seal has a circular shape, therefore, it doesn't matter how it is oriented on the underlay but we recommend that the product logo be horizontal.

Yours faithfully,

Alexander (Sasha) Dontschenko
